| Abstract | 1 |
| 1 Situation of Mineral Resources in China | 5 |
| 1.1 Huge Demands for Mineral Resources | 5 |
| 1.2 Insufficiency of the Proved Reserves of Mineral Resources for Maintaining the Development of the Country | 7 |
| 1.3 The Low Level Utilization of Mineral Resources and Prominent Environmental Challenges | 8 |
| 1.4 The Increased Numbers of Crisis Mines | 9 |
| 1.5 Huge Potential for Prospecting More Mineral Resources | 9 |
| 2 A Roadmap for Scientific & Technological Development of Solid Mineral Resources in China to 2050 | 11 |
| 2.1 Overview of a Roadmap for Scientific & Technological Development of Solid Mineral Resources in China to 2050 | 11 |
| 2.2 Metallogenic Theories and Regularities | 14 |
| 2.3 Predictive Prospecting and Minerals Exploration | 26 |
| 2.4 Clean and Efficient Utilization of Mineral Resources | 42 |
| 2.5 Resources Substitution and Cyclic Utilization | 53 |
| 2.6 Global Allocation of Mineral Resources | 66 |
| 3 Policies Required to Attain Objectives | 83 |

| | |
|---|-----------|
| 3.1 To Expedite the Building of Industrial Technological Innovation System | 83 |
| 3.2 To Strengthen Innovative Personnel Training and Team Building in the Field of Mineral Resources | 83 |
| 3.3 To Increase the Funding for Technological Innovation | 84 |
| 3.4 To Strengthen the Building of Basic Scientific and Technological Platforms | 84 |
| 3.5 To Standardize Management of Mining Industry and to Strengthen the Lawful Mining Administration | 85 |
| 3.6 To Pay Attention to Overall Planning of Global Mineral Resources | 85 |
| 3.7 To Set up Incentive Policies and Laws on the Development of New Resources Industry | 86 |
| 3.8 To Set up Incentive Policies and Laws on Application of Technological Innovation | 86 |
| 4 Conclusion | 87 |
| References | 88 |
| Epilogue | 93 |
