Preface *XI*

Annotation List *XIII*

1	Introduction	1
1.1	Historical Perspective	1
1.2	Evolution Periods and Milestones	2
1.2.1	Early Times (1987–1992)	2
1.2.2	Exploration and Expansion (1993–1999)	3
1.2.3	Cantilever–Tip Dynamics (2000–2006)	4
1.2.4	Multifrequency AFM (2007 to Present)	4
1.3	Tapping Mode or Amplitude Modulation Force Microscopy?	5
1.4	Other Dynamic AFM Methods	6
1.4.1	Frequency Modulation AFM	6
1.4.2	Amplitude Modulation versus Frequency Modulation AFM	6
2	Instrumental and Conceptual Aspects	9
2.1	Introduction	9
2.2	Amplitude Modulation AFM	9
2.3	Elements of an Amplitude Modulation AFM	10
2.3.1	Feedback Controller	10
2.3.2	Optical Beam Deflection	12
2.3.3	Other Detection Methods	13
2.3.4	Tip–Sample Motion System	14
2.3.5	Imaging Acquisition and Display	14
2.4	Cantilever–Tip System	15
2.4.1	Cantilevers	16
2.4.2	Tips	17
2.4.3	Excitation of Cantilever–Tip Oscillations	18
2.5	Calibration Protocols	19
2.5.1	Optical Sensitivity	19

2.5.2	Calibration of the Cantilever Force Constant	20
2.5.2.1	Thermal Noise Method	20
2.5.2.2	Sader Method	21
2.6	Common Experimental Curves	21
2.6.1	Resonance Curves in Air and Liquids	21
2.6.2	Amplitude and Phase Shift Distance Curves	23
2.7	Displacements and Distances	23
3	Tip-Surface Interaction Forces	25
3.1	Introduction	25
3.2	Van der Waals Forces	25
3.3	Contact Mechanics Forces	27
3.3.1	Derjaguin–Muller–Toporov Model	29
3.3.2	Johnson–Kendall–Roberts Model	30
3.4	Capillary Force	30
3.5	Forces in Liquid	32
3.5.1	Electrostatic Double-Layer Force	32
3.5.2	Derjaguin–Landau–Verwey–Overbeek Forces	33
3.5.3	Solvation Forces	34
3.5.4	Other Forces in Aqueous Solutions	35
3.6	Electrostatic Forces	35
3.7	Nonconservative Forces	36
3.8	Net Tip-Surface Force	38
3.8.1	Tip-Surface Force for a Stiff Material with Surface Adhesion Hysteresis	38
3.8.2	Tip-Surface Force for a Viscoelastic Material	39
4	Theory of Amplitude Modulation AFM	41
4.1	Introduction	41
4.2	Equation of Motion	42
4.3	The Point-Mass Model: Elemental Aspects	43
4.3.1	The Harmonic Oscillator	44
4.3.2	Dynamics of a Weakly Perturbed Harmonic Oscillator	46
4.4	The Point-Mass Model: Analytical Approximations	48
4.4.1	Perturbed Harmonic Oscillator	49
4.4.2	Wang Model	50
4.4.3	Virial Dissipation Method	51
4.5	Peak and Average Forces	52
4.5.1	Peak Forces	53
4.5.2	Average Forces	53
4.6	The Point-Mass Model: Numerical Solutions	54
4.6.1	Attractive and Repulsive Interaction Regimes	55
4.6.2	Driving the Cantilever Below Resonance	56
4.7	The Effective Model	56
	Appendix: The Runge–Kutta Algorithm	56

5	Advanced Theory of Amplitude Modulation AFM	59
5.1	Introduction	59
5.2	<i>Q</i> -Control	59
5.3	Nonlinear Dynamics	62
5.4	Continuous Cantilever Beam Model	64
5.4.1	One-Dimensional Model	64
5.5	Equivalence between Point-Mass and Continuous Models	67
5.6	Systems Theory Description	69
5.7	Force Reconstruction Methods: Force versus Distance	70
5.7.1	Lee–Jhe Method	70
5.7.2	Hölscher Method	71
5.8	Time-Resolved Force	73
5.8.1	Acceleration	74
5.8.2	Higher Harmonics Method	74
5.8.3	Direct Time-Resolved Force Measurements	76
6	Amplitude Modulation AFM in Liquid	77
6.1	Introduction	77
6.2	Qualitative Aspects of the Cantilever Dynamics in Liquid	77
6.2.1	Dynamics Far from the Surface	77
6.2.2	Dynamics Close to the Surface	78
6.3	Interaction Forces in Liquid	80
6.4	Some Experimental and Conceptual Considerations	82
6.5	Theoretical Descriptions of Dynamic AFM in Liquid	84
6.5.1	Analytical Descriptions: Far from the Surface	84
6.5.2	Analytical and Numerical Descriptions in the Presence of Tip–Surface Forces	87
6.5.3	Semianalytical Models	87
6.5.4	Finite Element Simulations	89
7	Phase Imaging Atomic Force Microscopy	91
7.1	Introduction	91
7.2	Phase Imaging Atomic Force Microscopy	91
7.3	Theory of Phase Imaging AFM	95
7.3.1	Phase Imaging Atomic AFM: High <i>Q</i>	95
7.3.2	Phase Imaging AFM: Low <i>Q</i>	97
7.4	Energy Dissipation Measurements at the Nanoscale	98
7.4.1	Energy Dissipation and Observables	98
7.4.2	Identification of Energy Dissipation Processes	99
7.4.3	Atomic and Nanoscale Dissipation Processes	100
8	Resolution, Noise, and Sensitivity	103
8.1	Introduction	103
8.2	Spatial Resolution	103
8.2.1	Vertical Resolution and Noise	104

8.2.2	Lateral Resolution	106
8.3	Image Distortion and Surface Reconstruction	108
8.4	Force-Induced Surface Deformations	109
8.5	Atomic, Molecular, and Subnanometer Lateral Resolution	111
8.5.1	True Resolution	112
8.6	High-Resolution Imaging of Isolated Molecules	113
8.7	Conditions for High-Resolution Imaging	113
8.8	Image Artifacts	114
9	Multifrequency Atomic Force Microscopy	117
9.1	Introduction	117
9.2	Normal Modes and Harmonics	117
9.2.1	Generation of Higher Harmonics	117
9.2.2	Coupling Eigenmodes and Harmonics	120
9.2.3	Imaging Beyond the Fundamental Mode	121
9.3	Bimodal AFM	122
9.3.1	Intermodulation Frequencies	124
9.4	Mode-Synthesizing Atomic Force Microscopy	125
9.5	Torsional Harmonic AFM	126
9.6	Band Excitation	127
10	Beyond Topographic Imaging	129
10.1	Introduction	129
10.2	Scattering Near-Field Optical Microscopy	129
10.3	Topography and Recognition Imaging	132
10.3.1	Tip Functionalization	133
10.4	Nanofabrication by AFM	134
10.4.1	AFM Oxidation Nanolithography	134
10.4.2	Patterning and Devices	136
