

TABLE OF CONTENTS

SUMMARY AND CONCLUSIONS	9
Chapter 1	
INTRODUCTION	32
I. The Role of Electricity in the Energy Balances of OECD Countries	32
II. Evolution in Electricity Generation	34
III. Environmental Impacts of Electricity Generation	39
IV. Structure of the Report	40
Chapter 2	
ENVIRONMENTAL IMPACTS ASSOCIATED WITH ELECTRICITY GENERATION FROM FOSSIL FUELS	42
I. The Coal Fuel Cycle	42
A. Coal Extraction	43
1. Surface and opencast mining	43
2. Deep mining	47
B. Coal Treatment	48
C. Mine Spoil Disposal	49
D. Transport	50
E. Storage	51
F. Occupational Health	52
II. The Oil Fuel Cycle	54
A. Crude Oil Exploration and Production	55
1. Brine	55
2. Oil lost by blowouts and spills at wells	55
3. Hydrogen sulphide production	56
B. Crude Oil Transportation	56
1. Marine oil transportation	56
2. Pipelines	57
C. Crude Oil Refining	58
D. Oil Desulphurisation	62
E. Transport of Residual Fuel Oil	62
III. The Natural Gas Fuel Cycle	63
A. Natural Gas Exploration and Production	63
B. Natural Gas Transportation	63

IV. Electricity Generation by Fossil Fuels	65
A. Resource Use (Land and Water)	66
B. Residuals Emitted by Power Plants	66
1. Emissions of air pollutants	66
a) Sulphur oxides	67
b) Nitrogen oxides	68
c) Particulates	68
d) Trace metals	68
e) Carbon dioxide	72
f) Thermal discharges	72
2. Production of solid wastes	72
C. Amelioration of Residuals Impacts from Power Plants	73
1. Control of sulphur oxides	73
2. Control of nitrogen oxides	78
3. Control of particulate matter	79
4. Solid waste disposal	80
5. Water pollution control	80
6. Other environmental control systems	80
7. Pollution control costs for electricity generation	81

Chapter 3

ENVIRONMENTAL IMPACTS ASSOCIATED WITH ELECTRICITY GENERATION FROM THE URANIUM FUEL CYCLE	85
I. The Uranium Fuel Cycle	85
A. Uranium Mining and Milling	85
B. UF Conversion	89
C. Uranium Enrichment	89
D. Fuel Fabrication	90
E. Nuclear Power Generation	90
F. Fuel Reprocessing	93
G. Management of Radioactive Wastes	95
H. Decommissioning	97

Chapter 4

ENVIRONMENTAL ASPECTS OF RENEWABLE ENERGY SOURCES	99
I. Biomass	99
II. Solar Energy	100
III. Geothermal	101
IV. Hydroelectric	103
V. Wind	104

Chapter 5

ENVIRONMENTAL PATHWAYS AND IMPACTS OF RESIDUALS	106
I. Pathways of Airborne Residuals	106
A. Dispersion	106
B. Transformation	107
1. Sulphur oxides	107
2. Nitrogen oxides	108
3. Organic compounds	108
4. Photochemical oxidants	108
5. Trace metals	109
C. Deposition	109
D. Airborne Radionuclides	110
II. Impacts of Airborne Residuals	110
A. The Acid Deposition Problem	110
B. Impacts on Vegetation	112
C. Impacts on Materials	113
D. Visibility	113
E. Carbon Dioxide and Global Climate Change	114
III. Pathways of Waterborne Residuals	114
A. Impacts on the Aquatic Food Web	115
1. Organic residuals	115
2. Inorganic residuals	116
3. Thermal water impacts	116
IV. Post Generation Impacts	116
A. High Voltage Transmission Lines	116
B. End-Use Risks	117

Chapter 6

ASSESSMENT OF HEALTH EFFECTS OF ELECTRICITY GENERATION	120
I. Impacts of Airborne Residuals on Human Health	120
A. Sulphur Oxides and Suspended Particulate Matter	120
B. Nitrogen Oxides	121
C. Photochemical Oxidants	122
D. Organic Compounds	122
E. Trace Metals	122
F. Radionuclides	123
II. Comparing Health Impacts of Electricity Generation Fuel Cycles	124
A. Health Damage Functions	124
B. Risk Analysis Methods	125
C. Consideration in Generic Analyses	125
1. Geographic variation	125

2. Temporal variation	125
3. Types of damages	126
4. Uncertainty	126
D. Technology Comparisons	127
1. Comparative health hazards - disease	127
2. Comparative health hazards - accidents	127
E. Results, Data Quality and Research Needs	129

Chapter 7

ENVIRONMENTAL EVALUATION OF STRATEGIES FOR COMBINED HEAT AND POWER PRODUCTION	133
I. Background	133
II. Assessment of Technological Alternatives	134
A. Condensing Turbines	134
B. Back-pressure Turbines	134
C. Intermediate Take-off Condensing (ITOC) Stations	135
D. Case of Very Large Power Plants	135
E. Case of Nuclear Power Plants	136
III. Possible Uses for Waste Heat	136
A. Direct Use of Waste Heat in Agriculture	136
B. Industrial Uses	137
C. District Heating Systems	138
IV. Barriers to the Use of Waste Heat from power Plants: The Case of District Heating	140
A. Basic Context	140
B. Problems of Rigidity from the Utility Side	140
C. Regulatory and Structural Barriers	141
D. Factors Influencing the Feasibility of Combined Heat and Power Production	141

Chapter 8

A MODEL FOR ASSESSING AIR POLLUTANT EMISSIONS FROM ELECTRICITY GENERATION FROM FOSSIL FUELS	143
I. Introduction	143
II. Data Sources	145
III. Assumptions	145
IV. Sensitivity Analysis	147
V. Results	147
VI. Conclusions	148
