List of Figures	xiii
List of Tables	xv
Listings	xvii
List of Abbreviations	xix
1 Introduction	1
1.1 Research Methodology	5
1.2 Research Questions	9
1.3 Chapter Structure	10
1 Motivation and Basic Foundations	13
2 Enterprise Portal Systems	17
2.1 Categorisation of Enterprise Portal Systems	18
2.2 Portal Standardisation Activities	21
2.3 Presentation of Selected Tools	25
2.3.1 Liferay Portal Server	26
2.3.2 GateIn Portal	27
2.3.3 SAP Netweaver Portal	28
2.3.4 IBM Websphere Portal	28
2.3.5 Microsoft SharePoint Server	29
2.4 Summary	30
3 Integration of Enterprise Applications	33
3.1 Drivers of Integration Efforts	35
3.2 Evaluation of Available Integration Approaches	38
3.2.1 Architecture-Focused Integration Approaches	39
3.2.1.1 PROMET	40
3.2.1.2 Application Architecture by Winter	40
3.2.1.3 IBM Patterns for e-Business	41
3.2.1.4 EAI Architecture Patterns by Lutz	42
3.2.1.5 OMG EAI Standardisation Efforts	43
3.2.1.6 Discussion	43
3.2.2 Technology-Oriented Integration Approaches for IT Systems Design	44
3.2.2.1 Enterprise Integration Patterns by Fowler/Hohpe-/Woolf	44
3.2.2.2 EAI Approach by Linthicum	45

3.2.2.3	Enterprise Integration by Cummins	46
3.2.2.4	Discussion	46
3.2.3	Integration of User Interface Elements	46
3.2.3.1	HTML Frame-based Integration	47
3.2.3.2	Web Clipping	47
3.2.3.3	Portal-specific Integration Approaches	48
3.2.3.4	Discussion	52
3.3	Summary	52
4	Options for Distributed Computing and the notion of "Ubiquitous Computing"	55
4.1	Cloud Computing	56
4.1.1	Classification of Cloud Offerings and Actors on the Market	61
4.1.1.1	Software as a service	62
4.1.1.2	Platform as a service	62
4.1.1.3	Infrastructure as a service	63
4.1.2	Cloud Architectures	63
4.1.3	Cloud Computing in Relation with Enterprise Portal Systems	65
4.2	Security in Distributed Systems	66
4.2.1	Motivation	68
4.2.2	Access Control Models	71
4.2.3	Security Policies	71
4.3	Summary	74
5	Software Architectures and their Representation	77
5.1	Software Architecture Modelling Concepts	78
5.1.1	Architecture Definition Languages	78
5.1.2	Fundamental Modelling Concepts	79
5.1.3	Unified Modelling Language	81
5.2	Architecture Structure Representations	82
5.3	Summary	86
II	Proposed Extensions to the Current State of the Art	89
6	A Reference Architecture for Portlet Integration	91
6.1	Methodology	93
6.2	Architecture Requirements	94
6.2.1	Strategy and Method for Requirements Collection	95
6.2.1.1	Analysis of Vision, Scope and Goals	95
6.2.1.2	Identification of User Types and their Roles	97
6.2.1.3	Collection of Requirements	98
6.2.1.4	Documentation of Requirements	99
6.2.1.5	Validation of Requirements Specification	99
6.2.2	Requirements Categorisation and Prioritisation	99
6.2.2.1	User Requirements	101
6.2.2.2	Usability Requirements	104

6.2.2.3	Organisational Requirements	105
6.3	Architecture Overview	105
6.3.1	Scope of the System	107
6.3.2	Context of the System	108
6.3.3	Architectural Building Blocks	110
6.4	Architectural Views	112
6.4.1	Functional Viewpoint	112
6.4.1.1	Components	113
6.4.1.2	Interrelations and Communication Flows between Components	116
6.4.2	Information Viewpoint	117
6.4.2.1	Data Elements	118
6.4.2.2	Data Ownership	120
6.4.2.3	Information Flow	120
6.4.2.4	Archives and Data Retention	121
6.4.3	Concurrency Viewpoint	121
6.4.4	Development Viewpoint	122
6.4.5	Deployment Viewpoint	123
6.4.6	Operational Viewpoint	125
6.5	Architectural Perspectives	126
6.5.1	Security Perspective	127
6.5.1.1	Applicability to Architectural Views	129
6.5.1.2	Concerns Addressed	132
6.5.2	Performance and Scalability Perspective	134
6.5.2.1	Applicability to Architectural views	134
6.5.2.2	Concerns Addressed	135
6.5.3	Availability and Resilience Perspective	137
6.5.3.1	Applicability to Architectural Views	137
6.5.3.2	Concerns Addressed	138
6.5.4	Location Perspective	139
6.5.4.1	Applicability to Architectural Views	139
6.5.4.2	Concerns Addressed	140
6.5.5	Usability Perspective	141
6.5.5.1	Applicability to Architectural Views	141
6.5.5.2	Concerns Addressed	142
6.6	Summary	144
7	Portal Content Integration	147
7.1	Portal Content Syndication	148
7.2	User-Centric Application Integration	149
7.2.1	Support for Request-Oriented Protocols	153
7.2.1.1	Iframe-based Client-Side Integration	154
7.2.1.2	Applet-based Client-Side Integration	155
7.2.1.3	Proxy-based Server-Side Integration	155
7.2.1.4	Summary	157
7.2.2	Support for Connection-Oriented Protocols	157

7.3	Summary	159
8	Inter-Portlet Communication	161
8.1	Portlet Communication Models	164
8.2	Portlet Communication Policies	165
8.2.1	Requirements of Policy Approaches	165
8.2.2	Evaluation of Available Policy Approaches	167
8.3	Flexible Context-Based Communication Policies	168
8.3.1	Definition of Context-Aware Inter-Portlet Communication	168
8.3.2	An Example of Context-Aware Inter-Portlet Communication	170
8.4	Summary	171
III	Evaluation and Future Research	173
9	Architecture Validation: The SPIKE Prototype	175
9.1	Project Overview	176
9.1.1	Project Vision and Objectives	177
9.1.2	SPIKE Three Layer Architecture	178
9.1.3	Related Research	180
9.2	Architecture Implementation Details	181
9.2.1	Global Architecture Overview	182
9.2.2	Components Used by the Project	183
9.3	Software Implementation Details	185
9.3.1	User-centric EAI Implementation	185
9.3.1.1	HTTP	185
9.3.1.2	RDP	189
9.3.1.3	SSH	189
9.3.1.4	Telnet	189
9.3.1.5	VNC	189
9.3.2	Portlet Communication Policies	189
9.3.3	Service Management	195
9.4	Use Case Evaluation	198
9.5	Summary	200
10	Conclusion	201
10.1	Research Results	202
10.2	Future Directions	206
Appendices		206
A	Available Internet Platforms	207
B	SPIKE User Requirements	209
Bibliography		215
