Preface — V

List of Contributing Authors — XIII

Robert Schmid, Christophe Pillot, Axel Thielmann and Hubertus Bardt

1 Introduction to energy storage: market analysis, raw materials, recycling, new concepts — 1

- 1.1 Analysis of the emerging battery market and outlook — 1
- 1.1.1 Global battery markets — 1
- 1.1.2 LIB demand forecasts — 3
- 1.1.3 LIB production capacity announcements — 3
- 1.1.4 Regional distribution of cell production — 4
- 1.1.5 LIB demand by applications — 4
- 1.1.6 Developments, requirements, and future challenges across the segments EV, ESS, 3C — 5
- 1.2 Assessment of chemical elements for new battery concepts — 7
- 1.2.1 Parameters for assessment — 8
- 1.3 Conclusions — 14
- References — 14

Matthias Zschornak, Falk Meutzner, Jessica Lück, Arnulf Latz, Tilmann Leisegang, Juliane Hanzig, Melanie Nentwich, Jens Zosel and Perla B. Balbuena

2 Fundamental principles of battery design — 17

- 2.1 Nernst equation — 20
- 2.2 The Daniell cell — 23
- 2.3 Reactions at electrified interfaces — 24
- 2.4 Diffusion and migration in crystals — 26
- 2.5 Crystallographic, crystal chemical, and crystal physical peculiarities — 28
- 2.6 Classification of battery applications and types — 34
- References — 37

Melanie Nentwich, Bianca Störr and Juliane Hanzig

3 Battery concepts: The past, the present, and research highlights — 41

- 3.1 The past — 41
- 3.2 The present — 45
- 3.2.1 Flow accumulator — 45

3.2.2	Lead-acid accumulator —	47
3.2.3	Lithium ion accumulator —	47
3.2.4	Lithium–iron sulphide battery —	49
3.2.5	Lithium–sulphur and sodium–sulphur accumulator —	49
3.2.6	Metal fluoride accumulator —	51
3.2.7	Metal–air battery —	52
3.2.8	Mercury battery —	52
3.2.9	Molten salt accumulator —	53
3.2.10	Nickel–cadmium accumulator —	54
3.2.11	Nickel–metal hydride accumulator —	55
3.2.12	Silver oxide battery and accumulator —	56
3.2.13	Zinc–manganese oxide batteries —	57
3.3	Research highlights —	58
3.3.1	High-valent metal batteries —	58
3.3.2	3D printed cell —	61
3.3.3	Hybrid accumulator/fuel cell —	62
3.3.4	Liquid metal accumulator —	63
3.3.5	Metal–air accumulator —	64
3.3.6	Paintable accumulator —	65
3.3.7	Super-iron accumulator —	65
3.3.8	Tin–sulphur–lithium accumulator —	66
3.3.9	Virus-enabled electrodes —	66
3.3.10	Water accumulator —	67
3.4	Conclusion and outlook —	68
	References —	68

4 Battery Materials — 75

Falk Meutzner, Tina Nestler, Matthias Zschornak, Pieremanuele Canepa, Gopalakrishnan S. Gautam, Stefano Leoni, Stefan Adams, Tilmann Leisegang, Vladislav A. Blatov and Dirk C. Meyer

4.1	Computational analysis and identification of battery materials —	75
4.1.1	Introduction —	75
4.1.2	Voronoi–Dirichlet partitioning —	81
4.1.3	Bond valence methods —	92
4.1.4	Density functional modelling and the materials project —	100
4.1.5	Molecular dynamics —	110
4.1.6	Summary —	113
	References —	114

Falk Meutzner, Matthias Zschornak, Melanie Nentwich, Damien Monti and
Tilmann Leisegang

- 4.2 Electrodes: definitions and systematisation – a crystallographers
view — **123**
- 4.2.1 Definitions — **124**
- 4.2.2 Systematisation — **128**
- 4.2.3 Categorisation — **134**
- 4.2.4 Summary — **136**
- References — **136**

Goriparti Subrahmanyam, Ermanno Miele, Remo Proietti Zaccaria
and Claudio Capiglia

- 4.3 Nanostructured anode materials — **138**
- 4.3.1 Introduction — **139**
- 4.3.2 Intercalation/Deintercalation materials — **141**
- 4.3.3 Alloy/de-alloy materials — **147**
- 4.3.4 Conversion materials — **152**
- 4.3.5 Conclusions — **154**
- References — **155**

Tina Weigel and Florian Schipper

- 4.4 Modification of cathode materials for Li
batteries — **157**
- 4.4.1 Introduction — **157**
- 4.4.2 Surface coating — **158**
- 4.4.3 Doping — **159**
- 4.4.4 Summary — **161**
- References — **162**

Max Stöber and Charaf Cherkouk

- 4.5 Positive electrodes based on Ion-implanted SrTiO_3 — **166**
- 4.5.1 Introduction — **167**
- 4.5.2 Synthesis and structural characterization of SrTiO_3 single crystal
 O_2 -electrodes — **168**
- 4.5.3 Oxygen diffusion and defect chemistry in strontium
titanate — **169**
- 4.5.4 Oxygen solid electrolyte coulometry on ion-implanted SrTiO_3
single crystals — **170**
- 4.5.5 Summary — **172**
- References — **173**

**Tina Nestler, Elsa Roedern, Nikolai F. Uvarov, Juliane Hanzig,
Giuseppe Antonio Elia and Mateo de Vivanco**

- 4.6 Separators and electrolytes for rechargeable batteries:
Fundamentals and perspectives — 174**
- 4.6.1 Introduction — 175**
- 4.6.2 Fundamentals and categorization — 176**
- 4.6.3 Solid electrolytes — 179**
- 4.6.4 Ionic liquids — 202**
- 4.6.5 Conclusion — 208**
- References — 209**

Giovanni Battista Appetecchi

- 4.7 Safer electrolyte components for rechargeable
batteries — 220**
- 4.7.1 Introduction — 221**
- 4.7.2 Components for lithium battery electrolytes — 224**
- 4.7.3 Electrolyte confinement in polymer hosts — 227**
- 4.7.4 Electrolytes based on ionic liquid media — 230**
- 4.7.5 Electrolytes based on polymer media — 235**
- 4.7.6 Future trends — 243**
- 4.7.7 Acronym glossary — 246**
- References — 247**

5 Characterization methods — 261

Thomas Köhler, Juliane Hanzig and Victor Koroteev

- 5.1 Optical spectroscopy as a tool for battery
research — 261**
- 5.1.1 Raman spectroscopy — 262**
- 5.1.2 Fourier transform infrared spectroscopy — 268**
- 5.1.3 UV/Vis spectroscopy — 274**
- 5.1.4 Summary — 276**
- References — 277**

**Anastasia Vyalikh, Thomas Köhler, Tatiana Zakharchenko, Daniil M. Itkis,
Andraž Krajnc and Gregor Mali**

- 5.2 Magnetic resonance spectroscopy approaches for electrochemical
research — 282**
- 5.2.1 Nuclear magnetic resonance — 282**
- 5.2.2 Electron paramagnetic resonance — 298**
- 5.2.3 Conclusion — 303**
- References — 306**

Lyubov G. Bulusheva, Alexander V. Okotrub, Lada V. Yashina,
Juan J. Velasco-Velez, Dmitry Yu. Usachov and Denis V. Vyalikh

- 5.3 X-ray photoelectron spectroscopy study of the interaction of lithium with graphene — **311**
- 5.3.1 XPS introduction — **312**
- 5.3.2 Fast or time-dependent XPS — **314**
- 5.3.3 Disclosing structural properties of a graphene/metal interface by XPS — **315**
- 5.3.4 Lithium interaction with a metal-supported graphene monolayer — **317**
- 5.3.5 Lithium interaction with few-layer graphene and N-graphene — **318**
- 5.3.6 A step forward: XPS under operation conditions — **320**
- 5.3.7 Summary — **321**
- References — **322**

Hartmut Stöcker

- 5.4 X-ray diffraction methods — **324**
- References — **330**

Mikhail V. Avdeev, Ivan A. Bobrikov and Viktor I. Petrenko

- 5.5 Neutron methods for tracking lithium in operating electrodes and interfaces — **330**
- 5.5.1 Introduction — **331**
- 5.5.2 Neutron diffraction — **332**
- 5.5.2 Neutron reflectometry — **341**
- 5.5.3 Small-angle neutron scattering — **346**
- 5.5.4 Summary — **348**
- References — **350**

Claudia Funke and Venkata Sai Kiran Chakravadhanula

- 5.6 Characterisation of battery materials by electron and ion microscopy techniques: a review — **352**
- 5.6.1 Scanning electron microscopy: particle morphology and surface structure — **353**
- 5.6.2 Transmission electron microscopy: high-resolution morphology and microstructure — **356**
- 5.6.3 Chemical information and analytical electron microscopy — **361**
- 5.6.4 Focused ion beam system (FIB) — **366**
- 5.6.5 Overall and lithium specific challenges — **374**
- 5.6.6 Summary — **380**
- References — **380**

Max Stöber, Jens Zosel and Charaf Cherkouk

- 5.7 Oxygen solid electrolyte coulometry (OSEC) — 383**
- References — 385**

Wolfram Münchgesang and Ulrike Langklotz

- 5.8 Electrochemical analytical methods — 385**
- 5.8.1 Electrochemical cell — 387**
- 5.8.2 Cell components and their conductivity — 388**
- 5.8.3 Measurement set-up — 389**
- 5.8.4 Open circuit potential measurement — 390**
- 5.8.5 Potentiostatic cycling — 391**
- 5.8.6 Galvanostatic cycling — 392**
- 5.8.7 Cyclic voltammetry — 393**
- 5.8.8 Electrochemical impedance spectroscopy — 394**
- 5.8.9 Summary and outlook — 397**
- References — 397**

Erik Berendes, Sebastian Socher and Ulrich Potthoff

- 5.9 Applied battery diagnosis — 399**
- 5.9.1 Impedance spectroscopy as a tool for applied battery diagnosis — 399**
- 5.9.2 SoC determination — 400**
- 5.9.3 Impedance-based temperature detection — 402**
- 5.9.4 Battery degradation analysis — 404**
- 5.9.5 Summary — 405**
- References — 406**

Index — 409
