

TABLE OF CONTENTS

Description	Page no.
Contents	iii
List of figures	vi
List of table's	xiii
Chapter 1 Introduction and Motivation	
1.1 Introduction	1
1.2 Viscoelastic Materials	2
1.3 3M467 and 3M468 Viscoelastic adhesive	3
1.4 Role of Damping Materials	3
1.5 Evolution of Passive Damping Technology	5
1.6 Finite Element Analysis for thin Damped Sandwich Beams	6
1.7 Motivation	6
1.8 Applications of the Viscoelastic Materials Core	8
Chapter 2 Literature Review	
2.1 Introduction	13
2.2 Viscoelastic Materials used for Damping	13
2.3 Constrained Layer Damping	13
2.4 Emergence of the Constraining Layer: Kerwin's Model	14
2.5 Engineering Design of Passive Damping Treatments	15
2.6 Finite Element Models of Sandwich	16
2.7 Complex Behavior of Viscoelastic	18
Chapter 3 Theory of Composite Cantilever Beam With Viscoelastic Material Properties	
3.1 Introduction	19
3.2 Introduction to the Cantilever Beams	19
3.3 First Method Euler Bernoulli beam theory	20
3.4 Second Method Finite element analysis (ANSYS 14)	21
3.5 Third Method Passive Viscoelastic constrained layer damping (MATLAB)	22
3.6 Fourth method experimental involves half-power bandwidth method	27
Chapter 4 Results and Discussions for the Effect of Viscoelastic Material on Modal Frequency for Undamped and Damped Cantilever Beam that predicted by ANSYS14 and Euler-Bernoulli BeamTheory for the Three Materials Cantilever Beam	
4.1 Introduction	43
4.2 Undamped Cantilever Beam	43
4.2.1 Euler-Bernoulli Beam Theory	43
4.2.2 Finite Element Models	49
4.3 Damped Sandwich Cantilever Beam	67
4.3.1 Introduction to Sandwich Model	67
4.3.2 Damped Aluminum Cantilever Beam	69

4.3.3 Damped Steel and Cast Iron Cantilever Beam	80
4.4 Comparison between the Damping for the three Sandwich Cantilever Beam (Aluminum, Steel and Cast iron) with Viscoelastic Materials core type 3M468	97
4.5 Conclusion	100
Chapter 5 Results and Discussions for the Loss Factors that predicted by MATLAB (R2011a) and Experimental Lab for three materials cantilever beam	
5.1 Introduction	101
5.2 Calculation of System Loss Factor by using MATLAB (R2011a)	102
5.2.1 Effect of Frequency on the System Loss Factor	102
5.2.2 Method to Find the Transition Region for Aluminum Damped Cantilever Beam	103
5.2.3 Method to Find the Transition Region for Cast Iron and Steel amped Cantilever Beam	108
5.3 Comparison between the Loss factor for sandwich cantilever beam with viscoelastic material core type 3M468 and for the three materials	113
5.4 Effect of Frequency on the System Loss Factor for Variable Sandwich Cantilever Beam Thick	116
5.5 Effect of Viscoelastic Layer Thickness on the System Loss Factor for Aluminum Cantilever Beam	116
5.6 Effect of Constraining Layer Thickness and Elastic Modulus on the System Loss Factor for Different Materials	117
5.7 Effect of Host Beam Materials on the System Loss Factor	118
5.8 Effect of Frequency on the System Damping Ratio for Aluminum Cantilever Beam	120
5.9 Experimental Methods for Calculation the System Loss Factor for Damped Cantilever Beam by using Frequency Domain Methods and for the Three Materials Aluminum, Steel and Cast iron	123
5.9.1 Undamped Aluminum Cantilever Beam Loss Factor	123
5.9.2 Measurement of Loss Factor for Damped Aluminum Cantilever Beam with two types of viscoelastic materials core 3M467 and 3M468 by Using the half power bandwidth method	124
5.9.3 Experimental and Theoretical Correlation of Loss Factor for Sandwich Aluminum Cantilever Beam with Two Types of VEM Core (3M467and 3M468)	129
5.9.4 Experimental Measurement of Loss Factor for Cantilever Beam (Cast Iron and Steel) with VEM Core Type 3M468 by using Frequency Domain Method	133
5.9.5 Experimental and Theoretical Correlation for Cast Iron and Steel Sandwich Cantilever Beam with Viscoelastic Materials Core 3M468	138
5.9.6 Comparison between the Loss factor for damped cantilever beam with viscoelastic materials core type 3M468 and for the three materials by using half-power bandwidth method	139
5.10 Conculation	145

Chapter 6 Summary and Conclusions

6.1 Summary and Conclusions	146
6.2 Scope for Future Work	150

Chapter 7 References	151
-----------------------------	------------

Appendixes

Appendix A: MATLAB Programs	158
Appendix B: Modal Analysis Response by ANSYS14	170
Appendix C: Loss Factor Predictions by MATLAB	184
Appendix D: : Modal Analysis Response by Experimental Lab Test	187
