

Contents

Foreword — VII

Introduction — 1

1 Global energy consumption — 2

- 1.1 Strong growth in energy demand — 2
 - 1.1.1 Evolution of total energy consumption — 2
 - 1.1.2 Energy storage — 2
 - 1.1.3 Consumption by sector of economy — 6
 - 1.1.4 Projection of the evolution of world energy consumption — 6
 - 1.1.5 Potential for renewable energy sources — 8
- 1.2 Electricity production and consumption — 9
 - 1.2.1 Power generation — 9
 - 1.2.2 Increase of electricity consumption — 11
 - 1.2.3 Significant growth in electricity generation from renewable sources — 14
- 1.3 Electricity market — 15
 - 1.3.1 Electricity networks — 15
 - 1.3.2 Network stability — 16
 - 1.3.3 European electricity networks — 18
 - 1.3.4 North American electricity network — 18
 - 1.3.5 Other networks — 20
- 1.4 Electricity market structure — 21
- 1.5 Structure of electricity prices — 22
 - 1.5.1 High electricity prices for consumers — 24
- References — 25

2 Electricity of renewable origin — 26

- 2.1 Technologies — 26
 - 2.1.1 Wind energy — 26
 - 2.1.2 Photovoltaic — 30
 - 2.1.3 Solar concentration — 32
 - 2.1.4 Marine energies — 34
 - 2.1.5 Biomass, geothermal energy — 36
 - 2.1.6 Renewable electricity production records — 36
 - 2.1.7 Comparison of electricity costs by origin — 37
 - 2.1.8 Energy transition and renewable energy — 38
- 2.2 Variability in production and electricity consumption — 40
 - 2.2.1 Production and consumption forecasts — 40
 - 2.2.2 Electricity flow management — 40

2.2.3	The need for storage — 41
2.2.4	Estimation of surplus electricity — 42
2.2.5	Simulations — 42
2.3	Electricity storage — 43
2.3.1	Why store electricity? — 43
2.3.2	Characteristics of a storage system — 44
2.3.3	Storage technologies — 44
2.3.4	Comparison of available electricity storage solutions — 53
2.3.5	Characteristics of electricity storage technologies — 54
2.3.6	Electricity storage requirements — 55
	References — 56
3	Principle of power-to-gas — 57
3.1	Basic layout — 57
3.2	Hydrogen — 59
3.2.1	Properties — 59
3.2.2	Security — 61
3.2.3	Industrial production 62
4	Electrolysis — 63
4.1	Basic principle — 63
4.2	Chemical reactions — 63
4.2.1	Calculation from thermodynamic data — 65
4.2.2	Operating voltage – current density — 66
4.2.3	Operating parameters — 68
4.2.4	Cell yield — 69
4.2.5	Water dissociation energy — 70
4.2.6	Water consumption — 70
4.3	Alkaline electrolyser — 71
4.3.1	History and industrial development — 71
4.3.2	Operating parameters — 72
4.3.3	Structure of an alkaline electrolyser — 75
4.3.4	Auxiliary equipment — 77
4.3.5	Industrial equipment — 78
4.4	PEM electrolyser — 80
4.4.1	Principle — 81
4.4.2	PEM electrolyser structure — 82
4.4.3	Balance of plant — 84
4.4.4	Influence of the catalyst — 84
4.4.5	Operating parameters — 86
4.4.6	Industrial equipment — 87

4.4.7	Water treatment and consumption — 88
4.5	High-temperature electrolyser — 89
4.6	Other technologies — 93
4.6.1	High-frequency electrolysis — 93
4.6.2	Photoelectrolysis (photolysis) — 93
4.6.3	Solar hydrogen — 93
4.6.4	Other non-electrolysis ways to produce hydrogen — 94
4.7	Hydrogen purification — 94
4.7.1	Elimination of potassium hydroxide — 94
4.7.2	Oxygen removal — 94
4.7.3	Dehydration — 96
4.8	Technology comparison — 96
4.8.1	Characteristics of electrolyzers — 96
4.8.2	Alkaline membrane electrolyser: the best compromise? — 97
	References — 98
5	Power-to-gas strategies — 99
5.1	Hydrogen transportation — 99
5.1.1	Compression of hydrogen — 99
5.1.2	Hydrogen liquefaction — 106
5.2	Hydrogen transportation — 107
5.2.1	Transportation dedicated to hydrogen — 107
5.2.2	Direct injection of hydrogen into the natural gas network — 108
5.3	Hydrogen storage — 111
5.3.1	Compressed in tanks — 112
5.3.2	In liquid form — 112
5.3.3	In metal hydrides — 112
5.3.4	Storage in caverns — 115
5.3.5	In natural gas reserves — 116
5.3.6	Other storage methods — 116
5.4	Methanation — 119
5.4.1	Thermochemical methanation — 119
5.4.2	Co-electrolysis — 121
5.4.3	Biological methanation — 123
5.4.4	Methanisation and synergy with power-to-gas — 125
5.4.5	Methanation, the key to electricity from renewable sources? — 125
5.5	Use of hydrogen or methane produced — 126
5.5.1	Industry — 126
5.5.2	Energy – conversion into electricity — 127
5.5.3	Mobility — 131
5.5.4	Domestic use — 136
	References — 137

6 Beyond power-to-gas — 138

- 6.1 Power-to-liquid — 138
 - 6.1.1 Synthetic fuels — 138
 - 6.1.2 Power-to-liquid — 138
 - 6.1.3 Gas-to-liquid — 139
 - 6.1.4 PtL experimentations — 139
- 6.2 Power-to-heat — 143
 - 6.2.1 Principle — 143
 - 6.2.2 Heat storage — 143
 - 6.2.3 Urban experiments — 144
 - 6.2.4 Experiments in industry — 146
 - 6.2.5 Domestic experiments — 146
- 6.3 Combination of PtH and PtL — 147
 - References — 148

7 Power-to-gas experiments — 149

- 7.1 Early developments — 149
 - 7.1.1 HySolar programme (1986–1995) — 149
 - 7.1.2 Projects at the level of a building — 150
 - 7.1.3 Exploratory projects — 151
 - 7.1.4 First field experiments — 151
- 7.2 Research projects — 153
 - 7.2.1 The ZSW Institute in Stuttgart — 153
 - 7.2.2 Project WIND2H2 — 154
 - 7.2.3 National programmes or international cooperations — 156
- 7.3 Pilot projects — 157
 - 7.3.1 Germany, the leader — 157
 - 7.3.2 France — 173
 - 7.3.3 Other countries — 177
- 7.4 Comparison of current projects — 182
 - 7.4.1 Technologies — 182
 - 7.4.2 Applications — 182
- 7.5 Experimental results — 183

8 Financial approach to power-to-gas — 184

- 8.1 Hydrogen conversion capacity — 184
 - 8.1.1 Capacity of electrolyzers — 184
 - 8.1.2 Power-to-gas-to-power — 185
- 8.2 Power-to-gas economic evaluations — 186
 - 8.2.1 Cost of operational facilities — 186
- 8.3 Business model for power-to-gas — 187
 - 8.3.1 Analysed system — 188

8.3.2	Technical and economical analysis — 188
8.3.3	CAPEX — 190
8.3.4	OPEX — 191
8.3.5	Revenues — 191
8.3.6	Levelised cost of hydrogen — 192
8.3.7	Comparative studies — 193
8.3.8	Comparison with other technologies — 193
8.3.9	Energy mix and the cost for society — 194
	References — 195
9	Role of power-to-gas in energy transition — 196
9.1	Impact of power-to-gas on energy systems — 196
9.1.1	Legislation and regulations — 196
9.1.2	A new architecture for energy networks — 197
9.1.3	Need for decentralisation — 197
9.1.4	Convergence of electricity and gas grids – sector coupling — 203
9.2	Power-to-gas technology: a contribution to the protection of the environment — 203
9.3	“Hydrogen civilisation” or electron civilisation? — 204
9.4	Conclusion — 205
	References — 206
	Acronyms — 207
	Index — 209
