

Table of Contents

Abstract	i
Publications and Presentations	ii
Abbreviations and Notation	iv
Part I— Introduction and Theoretical Background	1
Chapter 1 Introduction	2
1.1 Challenge facing protein study with quantum chemistry	2
1.2 Treatment of large-size systems	5
1.2.1 Multiscale methods.....	5
1.2.2 Fragmentation methods	6
Chapter 2 Quantum Chemistry Theory	8
2.1 Hartree-Fock	10
2.1.1 Hartree-Fock approximation	10
2.1.2 Roothaan-Hartree-Fock equation	11
2.1.3 Self-consistent field	13
2.1.4 Post-Hartree-Fock	14
2.2 Density functional theory	17
2.3 Non-covalent interaction correction	21
2.4 Small basis set methods	22
2.5 Semi-empirical methods	23
Chapter 3 Topological Electron Density	24
3.1 Chemical bonding pattern recognition	26
3.1.1 Quantum theory of atoms in molecules.....	26
3.1.2 Electron localization function	29
3.1.3 Electron localizability indicator	30
3.1.4 Single exponential decay detector	31
3.2 Non-covalent interaction revealing	32
3.2.1 Non-covalent interactions index.....	32
3.2.2 Density overlap regions indicator.....	33

Chapter 4 Density-based Partitioning	35
4.1 DORI-based interaction	36
4.2 Promolecular density	38
4.3 Voronoi partitioning	40
Part II— Density-based Partitioning for Adaptive QM/MM	45
Chapter 5 Density-based Multiscale Methods	46
5.1 Overview of multiscale methods	46
5.2 Hybrid quantum mechanics and molecular mechanics	47
5.2.1 Quantum mechanics	48
5.2.2 Molecular mechanics	49
5.2.3 QM-MM boundary	51
5.3 Density-based QM/MM partitioning	52
5.3.1 Density-based QM region	53
5.3.2 Flowchart of density-based QM/MM partitioning	55
5.3.3 Tests of density-based QM/MM partitioning	56
Chapter 6 Density-based Adaptive QM/MM Method	60
6.1 Adaptive QM/MM	60
6.1.1 Adaptive partitioning	60
6.1.2 Discontinuity issue	63
6.2 Efficient DBA-QM/MM for large system modeling	70
6.2.1 Adaptive search region	70
6.2.2 Buffer region	72
6.3 Test application of DBA-QM/MM in molecular dynamics	74
Part III— Density-based Partitioning for Quantum Refinement	79
Chapter 7 Density-based Fragmentation Quantum Chemistry	80
7.1 Fragmentation methods	80
7.1.1 <i>Density matrix scheme</i>	81
7.1.2 <i>Energy scheme</i>	85
7.1.3 <i>Atomic property scheme</i>	91
7.2 Graph clustering methods	92
7.2.1 Louvain clustering	94

7.2.2	Girvan–Newman clustering	94
7.3	Density-based FQC	95
7.3.1	Graph composing	95
7.3.2	Graph clustering	98
7.3.3	Gradient collecting	99
7.4	Implementation example of density-based FQC in BPTI	101
Chapter 8 Density-based Fragmentation Quantum Refinement		104
8.1	Structure determination	104
8.1.1	X-ray crystallography	105
8.1.2	Cryo-electron microscopy	107
8.2	Structure refinement	109
8.2.1	Force field refinement	111
8.2.2	Manual refinement	112
8.2.3	Quantum refinement	113
8.3	QIR: towards automatic quantum refinement	115
8.3.1	Structure preparation	116
8.3.2	System size	117
8.3.3	Structure symmetry	118
8.3.4	Alternative locations	119
8.4	Structure validation	120
8.4.1	MolProbity validation	120
8.4.2	Quantum validation	122
8.5	Test applications of quantum refinement in QIR	125
8.5.1	Modeled structure: helix	126
8.5.2	Experimental structure: 2ONA	130
Chapter 9 Summary, Conclusions, and Outlook		138
Acknowledgments		142
Bibliography		145
