

Table of contents

1	INTRODUCTION	1
1.1	MEDICAL GENETICS AND THE GENOMIC REVOLUTION	1
1.2	GENETIC DISORDERS: AN OVERVIEW	1
1.3	CONVENTIONAL DIAGNOSTICS AND THE DIAGNOSTIC ODYSSEY	2
1.4	SANGER AND THE HUMAN GENOME PROJECT	3
1.5	THE NEXT-GENERATION-SEQUENCING TECHNOLOGY REVOLUTION	4
1.6	NGS MODALITIES USED IN THIS STUDY	5
1.6.1	Whole-Exome Sequencing (WES)	5
1.6.2	TruSight™ One Sequencing Panel: "The Mendeliome"	6
1.7	AN OVERVIEW OF SYNDROMIC SHORT STATURE SYNDROMES	7
1.8	THE SKELETAL DYSPLASIAS	8
1.8.1	Osteogenesis Imperfecta	9
1.8.1.1	Type I Collagen biosynthesis	10
1.8.1.2	Defects in osteoblast development and the WNT-signalling pathway	11
1.8.2	Undiagnosed Skeletal Dysplasias	14
1.9	SELECTED SHORT STATURE SYNDROMES	14
1.9.1	Dubowitz Syndrome	14
1.9.1.1	<i>C.elegans</i> as a model organism to study DNA damage response	18
1.9.2	Undiagnosed Short Stature	18
2	AIMS	19
3	METHODS AND MATERIALS	20
3.1	PATIENT RECRUITMENT AND INFORMED CONSENT	20
3.1.1	Ethics approval	20
3.1.2	Patients and Families	20
3.2	MATERIALS	20
3.2.1	Reagents/Buffers/Enzymes	20
3.2.2	Kits	21
3.2.3	Antibodies	21
3.2.4	Primers	21
3.2.5	Web resources	22
3.3	METHODS	22
3.3.1	Nucleic acid analysis	22
3.3.1.1	DNA extraction	22
3.3.1.2	Polymerase Chain Reaction (PCR)	22
3.3.1.3	Agarose gel electrophoresis and gel extraction	23
3.3.1.4	Sanger sequencing	23
3.3.2	Molecular cloning	23
3.3.2.1	Exon trapping	23
3.3.2.2	Generation of <i>MESDC2</i> mutant constructs	23
3.3.3	NGS technologies	24
3.3.3.1	Whole-Exome Sequencing (WES)	24
3.3.3.2	TruSight™ One Panel: Mendeliome	24
3.3.3.3	NGS Data Analysis	24
3.3.3.4	NGS Data Filtering strategy	25
3.3.3.5	Variant validation and curation	25
3.3.4	Cell culture	25
3.3.4.1	Cell proliferation	25
3.3.4.2	USP20-deletion mutant HAP1 cell-line	25
3.3.4.3	Cell transfection	26
3.3.4.4	Cell treatment	26
3.3.5	Immunological Methods	26
3.3.5.1	Western blot	26
3.3.5.2	Immunofluorescent (IF) staining	27
3.3.6	<i>C. elegans</i> -specific methods	27
3.3.6.1	Solutions / media / strains	27
3.3.6.2	Synchronization of worm cultures	27

3.3.6.3	Single worm lysis for genotyping	28
3.3.6.4	Ionizing radiation and UV radiation.....	28
3.3.6.5	HU treatment	28
3.3.6.6	Embryonic survival assay.....	28
3.4	STATISTICS	28
4	RESULTS.....	29
4.1	MOLECULAR GENETIC TESTING	29
4.2	SKELETAL DYSPLASIAS	30
4.2.1	Osteogenesis imperfecta: Novel Genes	30
4.2.1.1	Autosomal recessive mutations in <i>MESDC2</i> cause osteogenesis imperfecta	30
4.2.1.2	Mutations in <i>SEC24D</i> cause non-syndromic OI	37
4.2.2	Osteogenesis imperfecta: Novel Candidate Gene.....	39
4.2.2.1	<i>HYAL4</i> – a novel gene underlying autosomal recessive OI?	39
4.2.3	Skeletal dysplasias: Novel Candidate Genes	40
4.2.3.1	<i>ERII</i> : A candidate gene for a novel autosomal recessive SEMD syndrome associated with cutaneous syndactyly and early lethality	40
4.2.3.2	<i>MEGF8</i> : A candidate gene for a autosomal recessive SEMD resembling pseudoachondroplasia.....	42
4.2.3.3	<i>KDM5C</i> : A novel candidate gene for Angel-Shaped-Phalango-Epiphyseal Dysplasia?	43
4.2.4	Skeletal Dysplasias: Novel mutations and further delineation of the clinical spectrum.....	45
4.2.4.1	<i>PAM16</i> : A novel mutation in a patient with a milder phenotype and longer survival	45
4.2.4.2	<i>IARS2</i> : Confirmation of CAGSSS syndrome and the proposal of novel bone dysplasia family related to mitochondrial dysfunction	48
4.2.4.3	Metatarsal bony syndactyly in two fetuses with Smith-Lemli-Opitz syndrome: an under-recognized part of the clinical spectrum	50
4.2.4.4	Severe spondylar dysplasia in a patient with a <i>COL10A1</i> mutation	53
4.2.4.5	A novel <i>COL10A1</i> mutation underlies SMD corner fracture type.....	54
4.2.4.6	A novel homozygous <i>NPR2</i> mutation in an Algerian patient thought to have achondroplasia	56
4.2.4.7	The complex phenotypes of <i>B3GALT6</i> -associated disorders: the long road to a definitive diagnosis.....	57
4.3	SYNDROMIC SHORT STATURE SYNDROMES	59
4.3.1	Novel Genes Underlying Syndromic Short Stature.....	59
4.3.1.1	Mutations in <i>CKAP2L</i> cause Filippi syndrome	59
4.3.2	Novel Candidate Genes For Dubowitz Syndrome.....	61
4.3.2.1	First evidence implicating a <i>de novo</i> mutation in <i>USP20</i> in Dubowitz syndrome	61
4.3.2.2	Probable digenic inheritance: 2 novel candidate genes to explain the severe immunological phenotype and the Dubowitz syndrome phenotype in a single patient	70
4.3.2.3	<i>KREMEN1</i> : another player in autosomal recessively inherited Dubowitz syndrome?.....	72
4.3.2.4	A novel mutation in <i>DYRK1A</i> in a patient with a clinical diagnosis of Dubowitz syndrome.....	72
4.3.3	Syndromic Short Stature Syndromes: Novel Mutations and Further Delineation of The Clinical Spectrum.....	73
4.3.3.1	Novel mutation in <i>TELO2</i> : severe expression of You-Hoover-Fong syndrome	73
4.3.3.2	Novel mutation in <i>CDK5RAP2</i> causes severe intra-uterine growth retardation and microcephaly	77
4.3.3.3	Novel mutation in <i>VPS13B</i> in an Algerian family and intra-familial variability in Cohen syndrome.....	78
4.4	THE MENDELIOME STUDY	79
4.4.1	Mendeliome-Testing Process.....	79
4.4.2	Mutation Mining And The “MM-Team” Workflow	80
4.4.3	Patients and Mutations.....	81
4.4.4	Novel Genes.....	84
4.4.4.1	<i>AP3B2</i> : A novel gene underlying microcephaly	85
4.4.4.2	<i>PRMT7</i> : A novel gene underlying syndromic intellectual disability	85
4.4.4.3	<i>RNF213</i> : A novel gene underlying systemic sclerosis.....	85
4.4.5	Novel Phenotypes	86
4.4.5.1	<i>USP9X</i> : X-linked dominant Syndromic Intellectual Disability	87
4.4.5.2	<i>BMP1</i> : Syndromic short stature with growth hormone deficiency	88
4.4.5.3	<i>PMM2</i> : Micro-lissencephaly	88

4.4.5.4	<i>RARS2</i> : Severe ID with cerebral atrophy	89
4.4.6	Microdeletion Syndromes	89
4.4.6.1	M12: Microdeletion Chromosome 18	89
4.4.6.2	M13: Microdeletion Chromosome 7	89
4.4.6.3	M14: Microdeletion Chromosome X (<i>ACSL4</i>)	90
4.4.7	A Family with 2 Children with Different Genetic Disorders	91
4.4.8	Results from the Beta Test of the Updated Mendeliome	92
4.4.9	Novel Mutations.....	92
5	DISCUSSION	93
5.1	NGS ENDS THE DIAGNOSTIC ODYSSEY	93
5.2	NOVEL GENES FOR OSTEOGENESIS IMPERFECTA.....	93
5.2.1	Autosomal Recessive Mutations In <i>MESDC2</i> Cause Osteogenesis Imperfecta.....	94
5.2.2	<i>SEC24D</i> : A Novel Autosomal Recessive OI Gene.....	97
5.2.3	<i>HYAL4</i> : An Interesting Novel Candidate Gene For Autosomal Recessive OI.....	99
5.3	SKELETAL DYSPLASIAS	99
5.3.1	<i>ERII</i> : A Novel Mechanism Implicated In Skeletal Dysplasia.....	99
5.3.2	<i>MEGF8</i> : A Novel Candidate For An Autosomal Recessive SEMD Resembling Pseudoachondroplasia	100
5.3.3	Implications of De Novo Variant in <i>KDM5C</i> – A Novel ASPED Gene?	101
5.3.4	Patient with a Novel Mutation in <i>PAM16</i> Shows That SMDMDM Is Not Always Associated With Early Demise	102
5.3.1	Confirmation of CAGSSS Syndrome and a New Mitochondrial Bone Dysplasia Family.....	103
5.3.2	Confirmation of Bony Syndactyly as an Under-Recognized Part of the SLOS Clinical Spectrum.....	107
5.3.3	Novel Findings In Patients With Mutations In <i>COL10A1</i>	108
5.3.1	AMDM: Correct Diagnosis Facilitates Accurate Genetic Counselling.....	109
5.3.2	<i>B3GALT6</i> : Ending The 15 Year Diagnostic Odyssey.....	109
5.4	SHORT STATURE SYNDROMES	110
5.4.1	Mutations In <i>CKAP2L</i> Cause Filippi Syndrome.....	110
5.4.2	Dubowitz Syndrome: Genetic Heterogeneity The Rule Rather Than The Exception	111
5.4.2.1	<i>USP20</i> : A novel player in DNA damage repair	111
5.4.2.2	<i>FAT1/FYB</i> : Digenic inheritance may explain complex phenotype.....	113
5.4.2.3	<i>KREMEN1</i> : A further underling cause for Dubowitz syndrome?.....	114
5.4.2.4	<i>DYRK1A</i> : A novel mutation in a patient with a clinical diagnosis of Dubowitz syndrome.....	115
5.4.3	Novel Mutations in <i>TELO2</i> and expanding the YHFS clinical spectrum.....	116
5.4.4	Further Novel Mutations for Syndromic Short Stature.....	117
5.5	THE MENDELIOME STUDY.....	118
5.6	AFTER GENE IDENTIFICATION – NEXT STEPS?.....	120
