

Contents

1	Introduction	1
1.1	Research Questions and Contributions	2
1.2	The Human-Centered Design Approach	4
1.3	Thesis Outline	6
1.4	Publications	6
2	Methods and Measures	11
2.1	Understanding the Problem	11
2.2	Exploring Designs	11
2.3	Developing Prototypes	12
2.4	Evaluate Solution	14
2.5	Measures for User Experience, Driving Performance and Gaze	17
3	Background	21
3.1	Human Perception, Information Processing, and Decision Making	21
3.2	Ambient Light Displays	26
3.3	The Driving Simulator Used in Our Studies	31
3.4	Summary	34
4	Exploring ALDs for Driver Assistance Systems	37
4.1	Placement of In-Vehicle Ambient Light Patterns	38
4.2	Navigation Assistance	44
4.3	Reverse Parking Assistance	51
4.4	Forward Collision Warning	58
4.5	Supporting Drivers' Lane Change Decision Making	63
4.6	Further Light Displays in Literature	73
4.7	Summary	77
5	ALDs for Lane Change Decisions	79
5.1	Discrete or Continuous Encoding of the Gap	79
5.2	Adapting the Display to Driver Uncertainty	94
5.3	An ALD for an LCDAS in Free Driving	106
5.4	An ALD Against a Display Requiring Foveal Vision	118
5.5	Summary	130

6	Designs for the Future	133
6.1	A Scaled Model Car to Visualize Ambient Light Patterns	133
6.2	A Portable In-Vehicle Light Display	139
6.3	Adapting to Frustration	142
6.4	Informing Passengers About Intentions of Their Automated Car	148
6.5	Summary	154
7	Conclusion	155
7.1	Research Contributions	155
7.2	Limitations and Future Work	158
7.3	Concluding Remarks	160
	Figures	161
