PART I INTRODUCTION

1 Family reconstitution and the historical study of demographic behavior	3
The strengths of family reconstitution	4
The study of demographic transition	6
The scope and organization of the study	8
2 The source and the sample	12
Sources of data: village genealogies	12
Selection of families and quality of data	17
A note on the presentation of results	19
The sample villages	21
General characteristics	22
Population size and growth	26
Occupational distributions	29
Representativeness of the villages	31

PART II MORTALITY

3 Infant and child mortality: levels, trends and seasonality	35
Data quality and problems of measurement	36
Trends and levels of infant and child mortality	39
Neonatal and post-neonatal mortality	46
Implied life expectancy	53

Seasonality of infant mortality	60
Conclusions	68
4 Infant and child mortality: socio-economic and demographic differentials	70
Occupational and status differentials	71
Sex differentials	76
Maternal age, birth order, sibship size, and birth intervals	84
Conclusions	100
5 Maternal mortality	102
Issues of measurement and definition	102
Trends	105
Differentials	107
Mortality and reproductive history	113
Discussion	114
 PART III FAMILY FORMATION	
6 Marriage	119
Age at marriage	121
Patterns and trends	121
Socio-economic differentials	130
Age differences between spouses	137
Patterns and trends	137
Socio-economic differentials	141
Seasonality of marriage	144
7 Marital dissolution and remarriage	153
Marital dissolution	154
Remarriage	161
The distribution of marriage types	161
Probabilities of remarriage	163
Socio-economic differentials	174
Remarriage and the number of children	177
Discussion	181
8 Illegitimacy	185
Issues of definition and measurement	186
Measuring illegitimacy	188
Distinguishing non-legitimized and legitimized births	188
Measuring the prevalence of prenuptial births	191
Trends and levels of illegitimacy	192

Patterns of legitimization	198
Repetitive illegitimacy	203
9 Bridal pregnancy and prenuptial births	209
Measuring bridal pregnancy	209
Bridal pregnancy and prenuptial births	213
Out-of-wedlock pregnancies and their outcomes	218
Occupational and status differentials	222
Links to marriage and reproductive careers	226
Discussion: the circumstances of non-marital sexual activity	239
 PART IV MARITAL REPRODUCTION	
10 Trends in marital fertility and underlying natural fertility components	247
Levels and trends of marital fertility	248
Concepts and definitions	251
Age patterns of natural and controlled marital fertility	254
The Coale-Trussell indices	260
The overall trend in underlying natural fertility	264
The proximate determinants of natural marital fertility	267
Permanent sterility	269
Fecundability	272
Postpartum non-susceptibility	275
Intrauterine mortality	280
The changing seasonality of births	281
Discussion	283
11 From natural fertility to family limitation	287
Village-level trends in the index of fertility control	288
Age of mother at last birth	291
Occupational differentials	293
Parity progression probabilities	298
Parity or age dependence?	309
Discussion	314
12 Starting, stopping, spacing and the fertility transition	318
Birth spacing	318
Starting, spacing, and stopping	334
Proportion of couples effectively stopping	343
Discussion	346

PART V INTERRELATIONSHIPS IN DEMOGRAPHIC BEHAVIOR

13 Family size, fertility and nuptiality interrelationships	353
Trends and variation in family size	353
Age at marriage and family size	356
Individual-level relationships	356
Community-level and regional associations	362
Age at marriage and age at last birth	367
Age at marriage and marital fertility	372
Marital dissolution and family size	387
Discussion	390
14 Child mortality and reproductive behavior	393
Infant mortality and the birth interval	395
The child replacement effect	406
Strategy for analysis	406
Results	410
The role of child mortality in the fertility transition	435
Discussion	440

PART VI CONCLUSION

15 Population dynamics of the past: summing up	445
Mortality	446
Marriage patterns	448
Non-marital births and pregnancies	450
Natural marital fertility	451
The onset of family limitation	454
Conclusions	455
<i>Appendices</i>	
A Selection of couples for analysis	461
B Assessment of the quality of demographic data contained in German village genealogies	478
C Local village conditions	503
D The occupational and status classification schemes	520
E Calculation of infant and child mortality risks	535
F Prevailing infant-feeding patterns	542
G Evidence of biases in the determination of legitimization status	550
<i>Bibliography</i>	557
<i>Index</i>	571
