

## CONTENTS

Introduction

<u>Chapter I. A transcendence measure</u>	1
1.1. Introduction.	1
1.2. Preliminary lemmas.	1
1.3. Proof of Theorem I.	9
<u>Chapter II. Vanishing of linear forms without complex multiplication</u>	16
2.1. Introduction.	16
2.2. Preliminary lemmas.	16
2.3. The main lemma.	21
2.4. The auxiliary function.	26
2.5. Proof of Theorem II	32
<u>Chapter III. Vanishing of linear forms with complex multiplication</u>	36
3.1. Introduction.	36
3.2. The upper bound	36
3.3. Proof of Theorem III.	41
<u>Chapter IV. An effective proof of a theorem of Coates.</u>	44
<u>Chapter V. A lower bound for non-vanishing linear forms.</u>	49
5.1. Introduction.	49
5.2. The auxiliary function.	50
5.3. Proof of Theorem IV	61
<u>Chapter VI. Lemmas on elliptic functions with complex multiplication</u>	63
6.1. Introduction.	63
6.2. Multiplication formulae	63
6.3. Estimates for algebraic points.	68
<u>Chapter VII. Linear forms in algebraic points.</u>	77
7.1. Introduction.	77
7.2. Four lemmas	77
7.3. A simplification.	86
7.4. The auxiliary function.	88
7.5. The Wronskian	104
7.6. The case $n = 2$ ; a postscript.	111

<u>Appendix I</u>	
A non-analytic modular function . . . . .	.113
<u>Appendix II</u>	
Zeros of polynomials in several variables . . . . .	.123
<u>Appendix III</u>	
A transcendence theorem for algebraic points. . . . .	.132
<u>Appendix IV</u>	
Rational points on curves of genus one with complex multiplication. .	.137
References. . . . .	.141
