

Table of Contents

Preface	11
Symbols and Abbreviations	13
1 How It All Began: The Background of Microwave Processing	
1.1 The magnetron microwave energy generator	17
1.2 The microwave oven	17
1.3 From cooking to the study of microwave processing applications	18
1.4 Why microwave processing?	18
1.5 The beginnings of industrial microwave processing	21
1.6 Current status of microwave processing	22
1.6.1 Tempering of frozen foods	23
1.6.2 Microwave pasta drying	24
1.6.3 Precooking bacon	24
1.6.4 Poultry processing	25
1.6.5 Miscellaneous microwave food processes	31
1.6.5.1 Meat pattie cooking	31
1.6.5.2 Frankfurter manufacturing	31
1.6.5.3 Rendering	32
1.6.5.4 Drying egg yolk paste	32
1.6.5.5 Baking	32
1.6.5.6 Microwave sterilization	33
1.6.5.7 Potato processing	33
1.6.5.8 Cocoa bean roasting	33
1.6.5.9 Microwave vacuum drying	34
1.7 Summary	35
Bibliography	36

2 Microwave Technology

2.1 The nature of microwaves.	37
2.1.1 Background	37
2.1.2 Characteristics of microwaves	37
2.1.3 Techniques	38
2.1.4 Power generation	38
2.1.5 Power transmission	38
2.1.6 Microwave spectrum and ISM bands	39
2.2 How microwaves produce heat	39
2.2.1 Dielectric materials	39
2.2.2 Microwave heating mechanisms	41
2.2.2.1 Ionic polarization	41
2.2.2.2 Dipole rotation	41
2.2.3 Energy conversion	42
2.2.4 Penetration depth	42
2.3 Microwave theory and techniques.	44
2.3.1 Transmission lines	45
2.3.1.1 Transmission line modes	46
2.3.1.2 Standing waves	46
2.3.1.3 Waveguides.	48
2.3.1.4 Coaxial lines	59
2.3.1.5 Transmission line power capability	61
2.3.2 Impedance matching.	61
2.3.3 Smith chart.	65
2.3.4 Isolators and circulators	68
2.3.4.1 Isolators	68
2.3.4.2 Circulators	70
2.3.5 Dummy loads	71
2.3.5.1 Dry loads	71
2.3.5.2 Water loads.	72
2.3.6 Directional couplers	72
2.3.7 Detectors	75
2.3.7.1 Microwave diodes	75
2.3.7.2 Bolometers	76
2.3.8 Power meters	76
2.3.9 Slotted line standing wave detectors	76
2.3.10 The resonant cavity.	79
2.3.10.1 Cavity modes	70
2.3.10.2 Resonant wavelength	79
2.3.10.3 Number of modes in a cavity	80
2.3.10.4 Quality factor	80
2.3.11 Leakage detectors	81
Bibliography	81
Appendix	87

3 Microwave Power Generators

3.1 Introduction	88
----------------------------	----

3.2 Magnetrons	88
3.2.1 Theory of operation	88
3.2.2 Construction	89
3.2.2.1 Cathode/filament	89
3.2.2.2 Anode	91
3.2.2.3 Output coupler/antenna	91
3.2.2.4 Packaging	93
3.2.3 Magnetron input and load characteristics	96
3.2.3.1 Performance charts	96
3.2.3.2 Rieke diagram	98
3.2.3.3 Moding	99
3.2.3.4 Long line effects	100
3.2.3.5 Magnetic circuit characteristics	101
3.2.3.6 Filament characteristics	102
3.2.4 Cooling	102
3.2.5 Output launchers	103
3.2.6 Input filtering/leakage suppression	105
3.2.7 Impedance matching	106
3.2.8 Magnetron life and failure modes	109
3.2.9 Testing	109
3.2.9.1 Magnetron production and applications testing	109
3.2.9.2 User testing	110
3.3 Klystrons	112
3.3.1 Klystron — How it works	112
3.3.2 Klystron operation	113
3.3.3 Klystron cooling	116
3.4 Other ISM microwave power generators	116
3.4.1 Triode oscillator	116
3.4.2 One kW, 915 MHz magnetron	117
Bibliography	117
Appendix	120

4 Microwave Power Sources

4.1 Introduction	121
4.2 800 Watt 2450 MHz power source	121
4.2.1 Power supply circuit description	122
4.2.2 Waveforms	122
4.2.3 Magnetron current adjustment	122
4.2.4 High voltage transformer	123
4.2.5 Component ratings	123
4.2.6 Variable power control	123
4.2.7 Requirement for separate filament transformer	126
4.2.8 Interlocks	126
4.3 Full wave doubler power supply	126
4.4 Multiple power sources	128
4.5 High power microwave sources	128

4.5.1	Circuit description of high power source	129
4.5.1.1	Variable autotransformer	129
4.5.1.2	High voltage transformer	129
4.5.1.3	Rectifiers	132
4.5.1.4	Filament power	132
4.5.1.5	Voltage and current measurement	132
4.5.2	Power supply with saturable reactor control	132
4.5.3	Power control using an electromagnet	133
4.5.4	Controls and interlocks	134
4.5.5	Klystron power supply connections	135
4.6	Electromagnetic interference/radio frequency interference (EMI/RFI)	136
4.6.1	Line filters	136
4.6.2	Shielding and gasketing	137
4.7	Cooling	137
4.8	Criteria for selection of a power source	140
	Bibliography	140

5 The Microwave Oven

5.1	The birth of microwave cooking	141
5.2	The basic components of the microwave oven	143
5.2.1	Power supply	147
5.2.2	Power tube	147
5.2.3	Transmission section	149
5.2.4	Field stirrer	150
5.2.5	Oven cavity	151
5.2.5.1	Measuring microwave energy distribution	155
5.2.6	Microwave oven door	156
5.2.6.1	Metal contact seals	157
5.2.6.2	Contact choke seal	157
5.2.6.3	Non-contacting choke seal	158
5.2.6.4	Capacitive seal	159
5.2.7	Oven controls	159
	Bibliography	161

6 Applicators and Processing Systems

6.1	Introduction	162
6.2	Cavity applicators	162
6.2.1	Batch type cavity applicators	163
6.2.2	Continuous type cavity applicators	163
6.3	Waveguide applicators	
6.3.1	Rectangular waveguide applicators	167
6.3.2	Twisted waveguide applicator	167
6.3.3	Warped waveguide applicator	169
6.3.4	Circular waveguides	170
6.4	Antenna applicators	171
6.5	Other applicators	175

6.6 Microwave systems design step by step	175
6.6.1 Determining cost and advantages versus other methods	179
6.6.2 Estimate of power required	180
6.6.3 Decision on microwave frequency	182
6.6.4 Decision on applicator size and type	183
6.6.4.1 Method of energy introduction	185
6.6.4.2 Support of product in the applicator	185
6.6.5 Pre- or post-treatment	186
6.6.6 Temperature and humidity considerations	186
6.6.7 Materials of construction	186
6.6.8 Impedence matching	187
6.6.9 Microwave leakage control	187
6.6.10 Power supplies	188
6.6.11 Operating controls	188
6.6.12 Putting it all together	188
6.6.12.1 Research or pilot plant equipment	188
Bibliography	193
 7 Regulating Agency Requirements	
7.1 Introduction	194
7.2 US Federal Communications Commission (FCC)	
Regulations	194
7.2.1 Definitions of ISM equipment and industrial heating equipment	194
7.2.2 US ISM frequencies and tolerances	195
7.2.3 FCC Requirements for industrial microwave heating equipment	195
7.2.4 Technical limitations of Subpart D	196
7.2.5 Applicable documents	196
7.3 US Food and Drug Administration (FDA) Requirements	196
7.3.1 FDA regulations for microwave ovens	197
7.3.2 FDA regulations for industrial microwave processing systems	197
7.3.2.1 Procedure for compliance with regulations	197
7.3.2.2 Applicable documents	198
7.3.3 Other provisions covered by FDA regulations	198
7.4 US Department of Agriculture (USDA) requirements	199
7.4.1 Sanitation in the product zone	199
7.4.2 Sanitation in the non-product zone	199
7.5 National Sanitation Foundation (NSF)	199
7.6 European and Candian regulations	200
Bibliography	200
