

CONTENTS

Introduction	VII
1. Properties of the Ellipsoid Method	1
1.1. Basic Idea	1
1.2. Modifications of the Updates	7
1.3. The ellipsoid method in the case $\text{int}(S) = \emptyset$	13
2. Algorithmic Approaches Via Ellipsoid Methods for Solving Quadratic Programming Problems	20
2.1. Ellipsoid Methods and Optimization	20
2.2. Three Algorithms to Solve Convex, Quadratic Programming Problems	23
A. Method by Solving Systems of Inequalities - Pure Feasible Point Approach -	23
B. Feasible Point - Gradient Method	26
C. An Objective Function Ellipsoid Method	46
2.3. An Implemented Version of ALGORITHM C in the Case, Where S is a polyhedron	57
3. Applications of the Objective Function Ellipsoid Algorithm	64
3.1 The Minimal Distance Problem of Two Convex Sets	64
3.2. Determination of the Minimum of a Quadratic Function for a Class of Not Necessarily Convex Sets of Feasible Solutions	68
3.3. Minimization of Convex C_2 -Functions by Second-Order Approximation Using the Ellipsoidal Approach	71
4. Numerical Remarks, Experiences with ALGORITHM C1	76
4.1. Numerical behaviour of the ellipsoidal part of ALGORITHM C1	76
4.2. Computation of matrix C^{-1}	80

4.3.	The descent routine	81
4.4.	A termination routine	85
4.5	Implementation of the Algorithm, Computational Observations and Results. Examples	88
