Experiment, Theory and Surface Structure Determination

With 213 Figures

Springer-Verlag Berlin Heidelberg New York London Paris Tokyo

Contents

1.		e Relevance and Historical Development of LEED
	1.1	The Relevance of Surface Crystallography
	1.2	The Historical Development of LEED
		1.2.1 The Period Before Wave Mechanics
		1.2.2 The Discovery of Electron Diffraction
		1.2.3 The Aftermath of the Discovery of Electron Diffraction
		1.2.4 The Period 1930 – 1965
		1.2.5 The Renaissance of LEED: Experimental Advances in the
		Mid-1960s
		1.2.6 The Theoretical Solution: The Late 1960s and Early 1970s
		1.2.7 The Era of Structural Determination: The 1970s and 1980s
2.	The	LEED Experiment
		General Features of LEED Experiments 1
	2.2	Sample Mounting 1
	2.3	Electron Gun and Display System 1
		2.3.1 Electron Gun 1
		2.3.2 Display System
	2.4	Methods of Data Acquisition 2
		2.4.1 Faraday-Cup Collector and Spot Photometer 2
		2.4.2 Photographic Technique
		2.4.3 Vidicon Camera Method 2
		2.4.4 Position-Sensitive Detector 2
	2.5	Instrumental Response Function 2
		2.5.1 Basic Concepts 2
		2.5.2 Contributions to the Response Width 2
	2.6	Determination of Angle of Incidence
		2.6.1 Different Methods 3
		2.6.2 Theory
		2.6.3 An Example
	2.7	Determination of the Debye Temperature 4
		2.7.1 The Debye Temperature Normal to the Crystal Surface 4
		2.7.2 The Debye Temperature Parallel to the Crystal Surface 4
3.		lered Surfaces: Structure and Diffraction Pattern
	3.1	Two-Dimensional Periodicity and the LEED Pattern 4
		3.1.1 Miller and Miller-Bravais Indices

		3.1.2	Lattice and Basis	48
		3.1.3	Direct and Reciprocal Lattices	49
			attices at Surfaces	51
	3.3	Steppe	d and Kinked Surfaces	57
		3.3.1	The Step Notation	57
		3.3.2	The Microfacet Notation for Cubic Materials	59
		3.3.3	Unit Cells of Stepped and Kinked Surfaces	62
	3.4	Symme	etries and Domains at Surfaces	64
		3.4.1	Symmetries in Two Dimensions	64
		3.4.2	Domains	67
	3.5	Interp	retation of LEED Patterns	70
		3.5.1	Patterns with a Bravais Array of Spots	71
		3.5.2	Patterns with Multiple Bravais Arrays of Spots – Domains	74
		3.5.3	Patterns Exhibiting Extinctions Due to Glide-Plane	
			Symmetry	76
		3.5.4	Rationally Related Lattices and Coincidence Lattices	77
		3.5.5	An Instructive Example of Pattern Interpretation	80
		3.5.6	Incommensurate Lattices	82
		3.5.7	Split Spots	84
		3.5.8	An Example: Compact Structures vs. Antiphase Domain	
			Structures of Adsorbed Carbon Monoxide Overlayers	88
		3.5.9	Patterns with Multiple Specular Spots	89
		3.5.10	Laser Simulation of LEED Patterns	89
4.	Kin	ematic	LEED Theory and Its Limitations	91
	4.1	Definit	tion of Kinematic Theory	92
		4.1.1	Atomic Scattering Factor	92
		4.1.2	Elastic Scattering	92
		4.1.3	Amplitude of Diffraction	93
		4.1.4	Surface Sensitivity	93
		4.1.5	From Amplitudes to Intensities of Diffraction	94
	4.2	The Ki	nematic Structure Factor for Ordered Surfaces	95
		4.2.1	Two-Dimensional Bragg Conditions	95
		4.2.2	General Derivation of Two-Dimensional Bragg Conditions	
			in LEED from the Schrödinger Equation	98
		4.2.3	Plane Waves, Beams, and the LEED Pattern	99
		4.2.4	I-V, I- θ , I- ϕ , and Other Collections of Data	102
		4.2.5	Kinematic Diffraction by Bravais Lattices of Atoms	102
		4.2.6		105
		4.2.7	Surface Structures Deviating from the Bulk Structure	107
		4.2.8	Surfaces with Superlattices	108
		4.2.9	Modulated Structures	108
		4.2.10		110
		4.2.11	The Ewald Sphere	110
		4.2.12	Further Applications of the Kinematic Theory of LEED	114

.
