

## Contents

|   |     |
|---|-----|
| Preface . . . . .   | 4   |
| 0. Standard notations and assumptions . . . . .                                     | 7   |
| 1. f-divergences . . . . .  | 10  |
| 2. Special f-divergences and related statistical<br>distances . . . . .             | 34  |
| 3. Distances of processes with independent increments . . . . .                     | 52  |
| 4. Distances of processes with independent increments<br>on the half-line . . . . . | 68  |
| 5. Applications to the distribution of log-likelihood<br>ratio . . . . .            | 85  |
| 6. Distances of distributions on filtered spaces . . . . .                          | 92  |
| 7. Applications to contiguity and entire separation . . . . .                       | 142 |
| 8. Minima and maxima under constraints . . . . .                                    | 165 |
| 9. Applications to Fisher's informations . . . . .                                  | 182 |
| 10. Selected applications in point estimation . . . . .                             | 192 |
| Appendix . . . . .  | 204 |
| References . . . . .  | 215 |
