

Table of contents

Preface	12
1 An introduction to haemostasis	13
Control of haemostasis <i>in vivo</i>	14
The blood coagulation mechanism	17
The fibrinolytic mechanism	19
Naturally occurring inhibitors of coagulation and fibrinolysis	20
2 An introduction to the principles of molecular genetics	23
Restriction enzymes	24
Gene probes	24
Oligonucleotide probes	25
Electrochemical blotting	25
Restriction fragment length polymorphisms	25
3 The nature of procoagulant proteins	27
The contact factors	27
General properties.	27
Plasma prekallikrein.	28
High molecular weight kininogen	30
Factor XII	32
Factor XI.	35
Vitamin K dependent procoagulant factors	37
General properties.	37
Factor II	39
Factor VII	42
Factor X	47
Molecular basis for factor VII and factor X deficiency	51
Factor IX.	51
Biochemical characterisation of factor IX variants	55

Phenotypic analysis in carriers of factor IX deficiency	62
General principles	62
Factor IX antigen in carriers of haemophilia B	63
Prothrombin times in carriers of haemophilia B _M	63
Congenital combined deficiencies of prothrombin complex proteins	63
Molecular genetics of factor IX	64
Genetic defects in patients with hereditary factor IX deficiency	65
The use of restriction fragment length polymorphisms in studies of haemophilia B	69
The use of oligonucleotide probes in the diagnosis of haemophilia B	70
Potential success rate of diagnosing carrier status using genetic markers	71
Procoagulant co-factors: factor V and factor VIII	71
General properties	71
Factor V	72
Factor VIII and von Willebrand factor	76
Hereditary deficiency of factor V and factor VIII	91
Other hereditary combined deficiencies associated with factor VIII	93
The molecular genetics of factor VIII	93
Genetic defects in patients with hereditary factor VIII deficiency	95
von Willebrand factor	100
General properties	100
Biochemistry of von Willebrand factor in plasma	101
Biochemistry of von Willebrand factor in platelets	103
Biochemistry of von Willebrand factor from endothelial cells	103
Physiological control of endothelial von Willebrand factor	105
The correlation between multimeric structure and function of von Willebrand factor	106
The role of von Willebrand factor in platelet-vessel wall interactions	107
von Willebrand's disease	108
Molecular variants of von Willebrand's disease	109
Miscellaneous defects associated with von Willebrand's disease	114
von Willebrand's antigen II	115
The molecular genetics of von Willebrand factor	116
Gene defects in von Willebrand's disease	118
4 Fibrinogen	120
General properties	120
Biochemistry	120
Molecular genetics	123
Phenotypic expression	125
Molecular basis for the dysfibrinogenaemias	135
5 Factor XIII	137
General properties	137
Biochemistry	137
Molecular genetics	139

Phenotypic expression	140
6 Naturally occurring inhibitors of coagulation	143
General properties	143
Antithrombin III	143
Biochemistry and mode of action	143
Phenotypic expression	145
Molecular genetics and the molecular basis of antithrombin III deficiency	150
Protein C	150
Biochemistry and molecular genetics	150
Phenotypic expression	153
Thrombomodulin	155
Protein C inhibitor	156
Protein S	157
Biochemistry, molecular genetics and mode of action	157
Phenotypic expression	159
Heparin co-factor II	159
Miscellaneous serine esterase inhibitors	160
α 2-macroglobulin	160
α 1-antitrypsin	161
C1-esterase inhibitor	162
7 Components of the fibrinolytic mechanism	163
Plasminogen	163
Biochemistry and molecular genetics	163
Congenital deficiency and genetic variants of plasminogen	165
Endogenous plasminogen activators	166
Tissue plasminogen activator	167
Urokinase-like plasminogen activators	169
Activation of plasminogen	172
Fibrinolytic inhibitors	173
α 2-plasmin inhibitor	173
Fast-acting inhibitors of plasminogen activation	176
Plasminogen activator inhibitor I	176
Plasminogen activator inhibitor 2	177
Miscellaneous plasminogen activator inhibitors	177
8 Laboratory methods for immunoanalysis of proteins	178
Types of antisera	178
Homologous antibodies	178
Heterologous polyclonal antibodies	179
Monoclonal antibodies	179
Initial preparation of unlabelled antibody	180
Reagents	180
Method	181
Preparation of Fab fractions of antibody	181
Reagents	181

Method	181
Radioiodination of antibody immunoglobulin	182
Reagents	182
Method	182
Conjugation of antibody with horseradish peroxidase	183
Reagents	183
Method	183
Spectrophotometric assessment of conjugate	184
Preparation of solid-phase immunoabsorbents	184
Reagents	184
Coupling procedure	185
Affinity purification of conjugated antibody	185
Method	185
Agarose gel techniques	186
Countercurrent electrophoresis	186
Immuno-electrophoretic techniques	187
Electroimmunoassay (Laurell rocket technique)	187
Two-dimensional crossed immuno-electrophoresis	190
Modifications to the two-dimensional crossed immuno-electrophoresis technique	191
Enhanced detection of precipitin reactions with enzyme conjugated antibodies	193
Reagents	194
Method	195
Immunoradiometric assays	195
General principles	195
Two-site, solid phase immunoradiometric assays	196
One-site, fluid phase immunoradiometric assays	197
Enzyme linked immunoassays	198
Principle	198
Reagents	198
Method	199
Calculation of results	199
Immuno-electrophoresis using the discontinuous buffer technique	200
Gel forming template	200
Reagents	200
Preparation of samples for electrophoresis	202
Preparation of plates for electrophoresis	202
Electrophoresis conditions	202
Identification of protein bands after electrophoresis	202
Preparation of electrophoresis plates for direct analysis	203
Radiolabelled antibody and autoradiography	203
Detection with avidin-biotin peroxidase conjugate	204
Electroblotting techniques for the detection of proteins on membrane supports	205
Electrophoretic transfer	205
Visualisation of transferred proteins	205

Methods	207
9 Laboratory methods for the analysis of DNA	210
Organic reagents for extraction	210
Buffers and reagents for general use in DNA analysis	211
Extraction of DNA	211
From whole blood	211
From chorionic villi	212
Preparation of DNA probes	212
Reagents	212
Method	214
Radiolabelling of probes with ^{32}P	214
Reagents	215
Method	216
Note	216
Digestion of human DNA with restriction endonucleases	216
Buffers	217
General method	218
Notes	218
Gel electrophoresis and Southern blotting	218
Electrophoresis apparatus	219
Reagents	219
Method	220
Transfer to membrane support	220
Hybridisation	221
Reagents	221
Method	222
Preparation of concentrated stock solutions for DNA analyses	222
References	224
Index	293
