I Introduction	13
1 Objectives	15
2 Relevant Previous Investigations	16
3 Research Work (Synopsis)	18
II Synsedimentary Faulting	19
1 Introduction to the Geology of Synsedimentary Faults	19
1.1 Theoretical considerations of the formation of synsedimentary faults	19
1.2 Frequent types of synsedimentary faults	25
2 The Recognition of Ancient Synsedimentary Faults	33
3 The Rhenish Basin – A Favourable Test Case	40
3.1 The palaeogeographical framework	41
3.2 Palaeogeographical and palaeostructural development of the Rhenish Basin – an outline with special emphasis on synsedimentary faulting	46
3.3 Variscan orogenic overprinting (general aspects)	50
4 Late Palaeozoic Synsedimentary Fault Systems of the Rhenish Basin	52
4.1 Synopsis	52
4.2 Previous investigations	55
4.3 Investigated synsedimentary fault systems	58
4.3.1 Plettenberg-Affeln area	59
4.3.1.1 Data base	59
4.3.1.2 Geological framework	63
4.3.1.3 Synsedimentary faulting	68
4.3.2 Meggen area	71
4.3.2.1 Data base	71
4.3.2.2 Geological framework	73
4.3.2.3 Synsedimentary faulting	77
4.3.3 Indications of a synsedimentary fault zone trending from the Balve reef to the Oberscheld volcanic centre	85
4.3.4 Altenbüren area	88
4.3.4.1 Data base	88
4.3.4.2 Geological framework	94
4.3.4.3 Synsedimentary faulting	99
4.3.5 The likely continuation of the synsedimentary Altenbüren fault zone	101
4.3.6 Dexbach area	104
4.3.6.1 Data base	104
4.3.6.2 Geological framework	106
4.4 Further areas with indications of synsedimentary faulting	113
4.5 Late Palaeozoic volcanism and hydrothermal activity and their relation to synsedimentary fault zones	122
4.5.1 Devonian and Lower Carboniferous volcanism	122
4.5.2 Synsedimentary hydrothermal and exhalative activity	128
5 Present-Day Expression of Major Synsedimentary Fault Zones of the Rhenish Massif	129
5.1 Lineaments of the Rhenish Massif	129
5.1.1 Definition and general characteristics	129

5.1.2	Lineaments of the Rhenish Massif (description)	131
5.2	Metamorphism	137
5.2.1	Illite crystallinity	138
5.2.1.1	Theoretical basis (synopsis)	139
5.2.1.2	Sampling, preparation and analysis	141
5.2.1.3	Results	141
5.2.2	Coalification	147
5.3	Geophysical data	153
5.3.1	Geomagnetic field	153
5.3.2	Gravity field	156
5.3.3	Seismic data	158
6	Model for the Formation of Synsedimentary Fault Systems in the Rhenish Basin	161
III	Sediment-Hosted Submarine Hydrothermal Mineralizations – Characteristics, Structural Setting, Genetic Aspects	175
1	Formation of SEDEX Mineralizations and their Relation to Synsedimentary Faulting	175
1.1	Characterization of SEDEX deposits	175
1.2	The significance of synsedimentary faulting in the formation of SEDEX mineralizations	193
1.3	Metalliferous hydrothermal systems of sedimentary basins – a data compilation and discussion with specific consideration of the Meggen hydrothermal system	203
1.3.1	Formation and physicochemical characteristics	203
1.3.2	Geochemical fingerprints of the Meggen hydrothermal system	209
1.3.2.1	Data acquisition	211
1.3.2.2	Results	215
1.3.3	Chemical and mineralogical characteristics of the Meggen orebody and the possible source of the metals	228
2	SEDEX-Type and Related Mineralizations of the Rhenish Massif	231
2.1	Types of submarine-hydrothermal mineralizations, temporal and spatial distribution	231
2.2	SEDEX mineralizations	235
2.2.1	Meggen	235
2.2.2	Hachen basin	243
2.2.3	Plettenberg-Affeln	243
2.2.4	Oberhundem	249
2.2.5	Günterod	254
2.3	Pyrite and barite mineralizations related to volcanism	258
2.3.1	Pyrite occurrences associated with Lahn-Dill-type hematite mineralizations	258
2.3.2	Lohrheim	261
2.3.3	Eisen	262
IV	Characterization of a SEDEX-bearing Synsedimentary Fault System	266
	References	270
	Appendix	294
