| <b>1. Steel – the material of today and for tomorrow ..</b>     | <b>2</b>  | <b>5.2 Refining .....</b>                                   | <b>38</b> | <b>8.3 Rolling mill installations .....</b>                                  | <b>82</b>  |
| 1.1 Steel – this innovative material                            | 2         | 5.3 Present status of refining processes .....              | 41        | Roll stands .....  | 83         |
| 1.2 Fundamentals .....  | 3         | 5.4 Oxygen metallurgy .....                                 | 41        | Roll stand types .....   | 83         |
| 1.3 The various grades of steel ...                             | 7         | Refining with pure oxygen .....                             | 42        | Rolling-mill rolls .....   | 85         |
| General classification .....                                    | 7         | The various oxygen blowing processes .....                  | 42        | Rolling mills .....  | 85         |
| Groups of steels .....  | 7         | Process automation .....                                    | 49        | Rolling trains .....   | 86         |
| Examples of the further development of steel .....              | 8         | 5.5 Electric steelmaking .....                              | 50        | Finishing line .....   | 87         |
| <b>2. Raw materials for the production of iron and steel ..</b> | <b>10</b> | The electric arc furnace .....                              | 50        | <b>8.4 The stages in hot rolling of steel .....</b>                          | <b>88</b>  |
| 2.1 Iron Ores .....   | 10        | The melting .....   | 51        | Rolling semi-finished products ..  | 88         |
| Grades of iron ores .....                                       | 11        | The present state of the electric arc furnace process ..... | 52        | Rolling finished products .....  | 88         |
| Quality requirements and assessment of the ores .....           | 13        | Prospects .....   | 55        | <b>8.5 Other hot-forming processes ...</b>                                   | <b>93</b>  |
| Pretreatment of ores .....                                      | 15        | 5.6 The open-hearth process .....                           | 55        | The production of seamless and welded steel tubes .....                      | 93         |
| 2.2 Scrap .....   | 18        | 5.7 Secondary metallurgy (post-treatment of steel) .....    | 56        | Forging and pressing .....   | 96         |
| 2.3 Fuels and reducing agents .....                             | 18        | Fundamentals .....  | 56        | Extrusion .....  | 97         |
| 2.4 Fluxes .....  | 19        | Post-treatment processes .....                              | 57        | <b>8.6 Cold forming of steel .....</b>                                       | <b>98</b>  |
| 2.5 Refractories .....  | 19        | Vacuum treatment .....                                      | 59        | Cold rolling .....   | 98         |
| <b>3. From ore to steel .....</b>                               | <b>20</b> | Special refining processes .....                            | 61        | Cold drawing .....   | 101        |
| 3.1 Blast furnace – converter .....                             | 20        | Electroslag remelting .....                                 | 61        | Other methods of cold forming steel (examples) .....                         | 102        |
| Coke metallurgy .....   | 20        | 5.8 Outlook .....   | 62        | <b>8.7 Separating of steel .....</b>   | <b>104</b> |
| Coal metallurgy .....   | 21        | Environmental protection/ recycling .....                   | 64        | <b>8.8 Joining of steel .....</b>  | <b>104</b> |
| 3.2 The electric arc furnace .....                              | 22        | <b>6. Steel casting in the metallurgical plant .....</b>    | <b>65</b> | <b>8.9 Coating of steel, surface protection .....</b>                        | <b>105</b> |
| Sponge iron metallurgy .....                                    | 22        | 6.1 Ingot casting .....                                     | 66        | Temporary protection against corrosion, and special surface treatments ..... | 106        |
| Scrap metallurgy .....  | 22        | 6.2 Continuous casting .....                                | 67        | Non-metallic coatings .....  | 106        |
| 3.3 Secondary metallurgy .....                                  | 22        | The production stages in continuous casting .....           | 68        | Metallic coatings .....  | 108        |
| 3.4 Special developments .....                                  | 22        | Types of continuous casting plants .....                    | 68        | <b>8.10 Heat treatment of steel .....</b>                                    | <b>111</b> |
| <b>4. Reduction of iron ores .....</b>                          | <b>23</b> | Automation .....  | 70        | Annealing .....  | 112        |
| 4.1 Ironmaking .....  | 23        | Outlook .....   | 70        | Hardening .....  | 113        |
| The blast furnace plant .....                                   | 24        | <b>7. Iron and steel as casting alloys .....</b>            | <b>72</b> | Tempering .....  | 113        |
| Reactions in the blast furnace ..                               | 28        | 7.1 Cast iron .....   | 72        | Quenching and tempering .....  | 113        |
| The blast furnace products .....                                | 30        | Lamellar graphite cast iron .....                           | 72        | <b>9. Materials testing and quality assurance .....</b>                      | <b>114</b> |
| Materials management at the blast furnace .....                 | 31        | Spheroidal graphite cast iron ...                           | 73        | 9.1 Fundamentals .....   | 114        |
| Process control .....   | 32        | Malleable cast iron .....                                   | 73        | Service requirements .....   | 114        |
| Prospects .....   | 32        | 7.2 Cast steel .....  | 74        | Causes of failure .....  | 114        |
| 4.2 Direct reduction processes .....                            | 33        | <b>8. The forming of steel .....</b>                        | <b>75</b> | Fracture mechanics .....   | 114        |
| 4.3 Smelting reduction processes ..                             | 35        | 8.1 The basics of steel rolling .....                       | 75        | Variables affecting material data .....                                      | 114        |
| 4.4 Hot metal pretreatment .....                                | 36        | Deformation .....   | 75        | <b>9.2 Materials testing .....</b>   | <b>114</b> |
| <b>5. Steelmaking .....</b>                                     | <b>38</b> | Rolling .....   | 77        | Testing methods .....  | 115        |
| 5.1 Charge materials .....                                      | 38        | 8.2 Rolled steel products .....                             | 80        | <b>9.3 Quality assurance .....</b>   | <b>118</b> |
|   |           | Semi-finished products .....                                | 80        | <b>10. The application of steel .....</b>                                    | <b>121</b> |
