Byron P. Roe

## Probability and Statistics in Experimental Physics

With 40 Illustrations

Springer-Verlag New York Berlin Heidelberg London Paris Tokyo Hong Kong Barcelona Budapest

## Contents

	Pref	ace	v
1.	Basi	c Probability Concepts	1
2.	Som	e Initial Definitions	5
	2.1	Worked Problems	10
	2.2	Homework Problems	13
3.	Some Results Independent of Specific Distributions		
	3.1	Multiple Scattering and the Root $N$ Law	14
	3.2	Propagation of Errors; Errors When Changing Variables	18
	3.3	Some Useful Inequalities	20
	3.4	Worked Problems	21
	3.5	Homework Problems	25
4.	Disc	rete Distributions and Combinatorials	27
	4.1	Worked Problems	30
	4.2	Homework Problems	31
5.	Spec	cific Discrete Distributions	33
	5.1	Binomial Distribution	33
	5.2	Poisson Distribution	35
	5.3	Worked Problems	37
	5.4	Homework Problems	40
6.	The Othe	Normal (or Gaussian) Distribution and er Continuous Distributions	42
	6.1	The Normal Distribution	42
	6.2	The Chi-square Distribution	45

,

	6.3	F Distribution	47
	6.4	Student's Distribution	49
	6.5	The Cauchy Distribution (Breit-Wigner Distribution)	49
	6.6	Worked Problems	51
	6.7	Homework Problems	52
7.	Generating Functions and Characteristic Functions		
	7.1	Introduction	54
	7.2	Convolutions and Compound Probability	54
	7.3	Generating Functions	56
	7.4	Characteristic Functions	58
	7.5	Homework Problems	61
8.	The Simu	Monte Carlo Method: Computer Ilation of Experiments	62
	8.1	Using the Distribution Inverse	62
	8.2	Method of Composition	63
	8.3	Acceptance Rejection Method	65
	8.4	Computer Pseudo-Random Number Generators	66
	8.5	Worked Problems	69
	8.6	Homework Problems	71
9.	Two Dista	Dimensional and Multi-Dimensional	75
	9.1	Introduction	75
	9.2	Two Dimensional Distributions	75
	9.3	Multi-Dimensional Distributions	82
	9.4	Theorems on Sums of Squares	86
	9.5	Homework Problems	88
10.	The	Central Limit Theorem	<b>9</b> 0
	10.1	Introduction; Lindeborg Criterion	90
	10.2	Failures of the Central Limit Theorem	93

	10.3 Khintchine's Law of the Iterated Logarithm	97
	10.4 Worked Problems	99
	10.5 Homework Problems	101
11.	Inverse Probability; Confidence Limits	102
	11.1 Bayes' Theorem	102
	11.2 The Problem of $A$ Priori Probability	103
	11.3 Confidence Intervals and Their Interpretation	105
	11.4 When Is a Signal Significant?	111
	11.5 Worked Problems	113
	11.6 Homework Problems	117
12.	Methods for Estimating Parameters. Least Squares and Maximum Likelihood	118
	12.1 Method of Least Squares (Regression Analysis)	118
	12.2 Maximum Likelihood Method	120
	12.3 Putting Together Several Probability Estimates	128
	12.4 Worked Problems	130
	12.5 Homework Problems	132
13.	Curve Fitting	135
	13.1 The Maximum Likelihood Method for Multiparameter Problems	135
	13.2 Regression Analysis with Non-constant Variance	138
	13.3 The Regularization Method	145
	13.4 Non-linear Parameters	147
	13.5 Robustness of Estimates	153
	13.6 Worked Problems	154
	13.7 Homework Problems	157
14.	Bartlett S Function; Estimating Likelihood Ratios Needed for an Experiment	161
	14.1 Introduction	161
	14.2 The Jacknife	161

Contraction of the owner of the

## x Contents

	14.3	Making the Distribution Function of the         Estimate Close to Normal; the Bartlett S         Function	162
	14.4	Likelihood Ratio	168
	14.5	Estimating in Advance the Number of Events Needed for an Experiment	168
	14.6	Homework Problems	172
15.	Inter Prob	polating Functions and Unfolding lems	173
	15.1	Interpolating Functions	173
	15.2	Spline Functions	173
	15.3	B-Splines	175
	15.4	Unfolding Data	176
	15.5	Homework Problems	178
16.	Fitti	ng Data with Correlations and Constraints	180
	16.1	Introduction	180
	16.2	General Equations for Minimization	182
	16.3	Iterations and Correlation Matrices	183
17.	Beyond Maximum Likelihood and Least Squares; Robust Methods14		
	17.1	Introduction	189
	17.2	Tests on the Distribution Function	189
	17.3	Tests Based on the Binomial Distribution	196
	17.4	Tests Based on the Distributions of Deviations in Individual Bins of a Histogram	197
	17.5	Homework Problems	199
