# Contents

## Preface

1. The Role of Water in Global Environmental Change Processes.  
*Max Beran* 1
2. Evaluating the Terrestrial Water Balance from the Historical  
Climate Record. *David R Legates & Cort J Willmott* 23
3. Hydrology in Climate Models and Effects on Climate.  
*Peter R Rowntree & Lydia Dümenil* 59
4. Plant Control on Evapotranspiration: Models and Measurements.  
*Willem Bouten* 105
5. Soil - Vegetation - Atmosphere Relations: Process  
and Prospect. *William James Shuttleworth* 135
6. Effects of CO<sub>2</sub>-fertilization on Evapotranspiration.  
*Willem Bouten & Jan Goudriaan* 163
7. Snow and Ice Cover and Climate Sensitivity.  
*J Oerlemans & R Bintanja* 189
8. The Role of the Atmosphere in the water cycle.  
*José Pinto Peixoto* 199
9. Laurentian Great Lakes Dynamics, Climate and Response to Change.  
*Thomas E Croley II* 253

10. Modeling of Runoff and Streamflow at Regional to Global Scales. <i>Dennis P Lettenmaier</i>	297
11. New Trends in Modelling Soil Processes from Hillslope to GCM Scales. <i>Ezio Todini</i>	317
12. River Runoff Data for the Validation of Climate Simulation Models. <i>Nigel W Arnell</i>	349
13. Introduction to Climate Impacts Assessment. <i>Stewart J Cohen</i>	373
14. Scenarios for Hydrological Climate Change Impact Studies. <i>Nigel W Arnell</i>	389
15. Potential Changes to Hydrological Systems. <i>Stewart J Cohen</i>	409
16. Socio-economic Impacts of Changes in Water Resources due to Global Warming. <i>Nigel W Arnell</i>	429
Appendix: Poster Displays.	459
Index	463
