

CHAPTER 1 - OUTSTANDING ISSUES IN STUDIES OF CONTINENTAL MARGINS

Basic terminology related to margins of continents	1
Definition of crustal type at continental margins	3
Historical outline of perspectives on Cordilleran geology ..	4
Shortcomings of current models of Cordilleran evolution	7
Structure of western North America plate boundary in current models	14

CHAPTER 2 - EVALUATION OF THE DATA BASE

Direct geological observations - the main source of information	21
Physical parameters of rocks - constraints on interpretation of potential-field data	22
Rock magnetization	22
Rock density	24
Processing of potential-field data	25
Fundamental notions	25
Magnetic and gravity coverage	26
Reductions of gravity data	26
Horizontal-gradient maps	28
Upward continuation of potential-field data	30
Assessment of seismic data	31
Overview of the data	31
Ambiguities in seismic interpretation	32
Methodological principles of this study	35

CHAPTER 3 - PRE-CENOZOIC GEOLOGIC FRAMEWORK OF WESTERN CORDILLERA

Pre-Tertiary stratigraphic record	37
Paleozoic	37
Mesozoic	37
Tectonic stages of pre-Tertiary geologic evolution	42
Paleozoic interval	42
Late Triassic to Early Jurassic interval	42
Mid-Jurassic episode of tectonism	43
Late Jurassic to Late Cretaceous interval	45
Latest Cretaceous(?) to earliest Tertiary tectonism	46
Timing of terrane accretion in the western Cordillera	47
Place of the Coast Belt orogen in the tectonic evolution of western Cordillera	49
Local uncommon rock complexes on the western and southern periphery of Vancouver Island	51
Pacific Rim mélange complex (including Pandora Peak unit)	51
Leech River metamorphic complex	53

CHAPTER 4 - TERTIARY STRATIGRAPHIC FRAMEWORK OF COASTAL PROVINCES IN WASHINGTON AND BRITISH COLUMBIA

Early Tertiary paleoenvironments	54
Early Paleogene	54
Early Tertiary basaltic magmatism	55
Relationship of Crescent Formation massifs with early Tertiary sedimentary sequences	58

Stratigraphic record of mid-Eocene to Miocene sedimentary basins	59
Stratigraphic record of late Tertiary sedimentary basins ...	62
Overview of Tertiary geologic evolution of coastal provinces	64
Two main geologic provinces along the continental margin from Oregon to southeastern Alaska	64
Variations in tectono-magmatic style along the continental margin	65
Distribution of Tertiary sedimentary basins along the margin in time and space	69

CHAPTER 5 - SIGNIFICANCE OF THE TRANS-CORDILLERAN OLYMPIC-WALLOWA ZONE IN GEOLOGIC EVOLUTION OF THE WASHINGTON AND BRITISH COLUMBIA COASTAL REGIONS

Recognition of the Olympic-Wallowa Zone of crustal weakness	73
The OWSZ in eastern Oregon and Washington	76
The OWSZ in central Washington	78
The OWSZ as a boundary between North and South Washington Cascades	81
The OWSZ west of the Washington Cascades	85
Boundary fault systems of western OWSZ	90
South Vancouver Island fault system	90
North Olympic fault system	98
Central Olympic Basin	102
Hoh Basin	106
Deep structure of the Olympic Peninsula area from gravity data	108
On the nature of crystalline basement of the Olympic Peninsula	116
Deep structure of southern Vancouver Island from seismic data	117
Timing of inversion of the Central Olympic Basin and uplift of the Olympic Mountains	124
Possible causes of Olympic Mountains uplift	126

CHAPTER 6 - CONTINENTAL MARGIN OFF SOUTHEASTERN ALASKA, THE QUEEN CHARLOTTE ISLANDS, AND NORTHERN VANCOUVER ISLAND

Scope of ideas regarding tectonic nature of the North America-Pacific plate boundary	133
General structural characteristics of the plate boundary along the southeastern Alaska margin	136
Concerns about fidelity of geophysical models along the western Canada continental margin	138
Models of western Canada continental margin based on gravity data	141
Bathymetry of the British Columbia continental margin	143
Deep structure of the continent-ocean plate boundary off Queen Charlotte Islands	147
Southward extension of plate boundary off Queen Charlotte Sound	156
Concept of plate rigidity as applied to northern Juan de Fuca oceanic plate off western Canada	162
Plate-boundary zone off northern Vancouver Island and the Winona Basin	166

**CHAPTER 7 - CRUSTAL BLOCKS UNDER VANCOUVER ISLAND AND THE
EXTERIOR SHELF**

Variations in crustal thickness along the Insular Belt	186
Geological shortcomings of existing seismic models of Vancouver Island crust	188
Analysis of gravity anomalies on Vancouver Island	191
Seismic refraction constraints on deep crustal structure ...	195
Initial interpretations of Vancouver Island structure from seismic reflection data	198
Geology-based interpretation of Vancouver Island seismic data	202
Inconsistencies in current tectonic models of evolution of Vancouver Island and adjacent submerged margin	205
Geologic sketch of the Vancouver Island exterior shelf	210
Tectonic information from deep drilling in the Tofino Basin	217
Transverse faults and crustal structure of the exterior shelf	222
Identification of blocks and bounding faults	222
Cove block	226
Vargas block	228
Ucluth block	229
Bamfield block	232
Clo-oose block	236
Flattery block	237
Crucial role of geological information in validation of geophysical models	238

CHAPTER 8 - STRUCTURE OF CONTINENTAL SLOPE OFF VANCOUVER ISLAND

Regional overview of Vancouver Island continental slope	244
Gravity and magnetic anomalies along the continental slope off northern Washington and southern British Columbia	245
Deep structure of the southern Vancouver Island continental slope	249
Sediment-filled Juno depression on lower continental slope	256
Limited northward extent of subduction-related thrust faults and mélange along the continental margin	263
Zoning in the distribution of continental and oceanic crust on Vancouver Island continental slope	271

**CHAPTER 9 - INTERLOCKING OF CONTINENTAL AND OCEANIC CRUSTAL
BLOCKS ALONG THE CONTINENTAL MARGIN AND NON-RIGID
BEHAVIOR OF NORTHERN JUAN DE FUCA PLATE**

Place of block interlocking in the plate-boundary zone	275
Geomorphological expression of block interlocking	276
Magnetic and gravity expression of block interlocking	277
Earthquake seismicity in the zone of block interlocking	279
Evidence for lack of rigidity of northern Juan de Fuca plate	284

Constraints on the timing of intraplate deformation in the Juan de Fuca plate	288
Genetic aspects of the geology of western North America continental margin	290
Continuity of continental-crust structures on the submerged continental margin	290
Regional seismicity and questions about the subduction megathrust	293
Absence of megathrust earthquakes	295
Segmentation of volcanic chains in western Cordillera	299
Drilling tests of geophysical models of continental-margin structure	301
The pros and cons of dying subduction	304
Slow changes in tectonic regime at the continental margin ..	305
Importance of geological paradigm as a guide for geophysical interpretation	309
Other evidence for non-rigid behavior of the Juan de Fuca plate and gradual change of tectonic regime along the continental margin	317
Absence of bathymetric trench	317
Isometric geoid anomaly off the western North America continental margin	317
Deformation of the basaltic basement in the abyssal Cascadia Basin	318
Shearing of the Juan de Fuca plate in the third dimension	319
Gradual change in tectonic regime along the continental margin and deep structure of the margin region from teleseismic data	321
CHAPTER 10 - CONCLUDING REMARKS	322
REFERENCES	328
