Contents

Preliminaries	1
1. Sets	1
2. Graphs	2
3. Posets	3
4. Miscellaneous Notation	4
Chapter I. Mappings	5
1. Classes of Mappings	5
2. Fundamental Orders	9
3. Permutations	20
4. Patterns	26
Notes	29
Chapter II. Lattices	30
1. Distributive Lattices	31
2. Modular and Semimodular Lattices	42
3. Geometric Lattices	52
4. The Fundamental Examples	67
Notes	71
Chapter III. Counting Functions	73
1. The Elementary Counting Coefficients	73
2. Recursion and Inversion	85
3. Binomial Sequences	99
4. Order Functions	118
Notes	136
Chapter IV. Incidence Functions	137
1. The Incidence Algebra	138
2. Möbius Inversion	152
3. The Möbius Function	166
4. Valuations	181
Notes	195

Chapter V. Generating Functions.	196
1. Ordered Structures	197
2. Unordered Structures	211
3. G -patterns	220
4. G, H -patterns.	235
Notes.	254
Chapter VI. Matroids: Introduction	255
1. Fundamental Concepts	256
2. Fundamental Examples	270
3. Construction of Matroids.	285
4. Duality and Connectivity	306
Notes.	321
Chapter VII. Matroids: Further Theory	322
1. Linear Matroids	322
2. Binary Matroids	336
3. Graphic Matroids	351
4. Transversal Matroids	377
Notes.	390
Chapter VIII. Combinatorial Order Theory	391
1. Maximum-Minimum Theorems	391
2. Transversal Theorems.	403
3. Sperner Theorems	418
4. Ramsey Theorems.	440
Notes.	451
Bibliography	453
List of Symbols.	471
Subject Index.	477
