Electrochemistry of Glasses and Glass Melts, Including Glass Electrodes

With 146 Figures
and 22 Tables

Springer

Contents

0. About Terminology	1
<i>Dieter Krause</i>	
1. Overview	5
<i>Friedrich G.K. Baucke</i>	
1.1 Solid Glasses	6
1.1.1 Glass Electrodes	6
1.1.2 Glass Electrolysis	9
1.1.3 Ionic Transport: Conductivity	12
1.1.4 Mixed-Alkali Effect	13
1.1.5 Glass Corrosion, Glass Durability	16
1.1.6 Active Thin-Layer Systems	18
1.1.7 Electrometric pH Measurement	21
1.2 Isothermal Glass-Forming Melts	24
1.2.1 Redox State and Basicity	24
1.2.2 Transport Properties: Electrical Conductivity	27
1.3 Non-Isothermal Oxidic Glass-Forming Melts	28
References	29
2. Electrochemistry of Solid Glasses	35
<i>Friedrich G.K. Baucke</i>	
2.1 Introduction	35
2.2 Operational Basis and Response of Glass Electrodes	39
2.3 Historical Notes	46
2.4 Experimental Methods for the Investigation of Glass–Solution Interfaces	54
2.5 Glass in Contact with Solutions – Interfacial Equilibria	58
2.5.1 Qualitative Description	59
2.5.2 Quantitative Treatment	66
2.5.3 Rigorous Examination of Interfacial Equilibria – the Sub-Nernstian Response	71
2.5.4 The Transition Range Between the pH and the pM Response of Glass Electrodes	81
2.5.5 Kinetics of Interfacial Equilibria	89

2.6	Field-Driven Transport of Ions Into and Within Glasses	96
2.6.1	Electric Contacts	96
2.6.2	Electromigration of “Guest Protons” and “Guest Deuterons”	100
2.6.3	Interfacial Equilibria in Electric Fields – Transfer of Different Cations Across Glass–Solution Interfaces	109
2.6.4	Sterical Effects	117
2.6.5	Simultaneous Electromigration of Ions and “Guest Ions”	121
2.6.6	The Moving Boundary Between Different Electromigrating Ions	135
2.6.7	Proton Traps and Heat Treatment-Induced Network Changes	145
2.6.8	A Different Situation: Electrolysis of Borate Glasses	151
2.7	Interfacial Equilibria Under the Influence of Subsurface Concentration Gradients	156
2.7.1	Proton/Alkali Ion Interdiffusion: Glass Leaching	159
2.7.2	Interaction of Glasses with Humid Atmospheres	169
2.7.3	Alkali/Alkali Ion Interdiffusion	171
2.7.4	Diffusion Potentials in Subsurface Glass Layers	173
2.7.5	Additional Surface Reactions	182
2.7.6	Significance of Interfacial Equilibria for Glass Corrosion	186
2.8	Hydrogen-Sensitive Platinum-Covered Glass Electrode Membranes	190
2.9	The Dissociation Mechanism of Glass Electrodes – Discussion	196
2.9.1	Interfacial Equilibrium	196
2.9.2	Subsurface Interdiffusion	209
2.9.3	pD Response of Glass Membranes	217
2.9.4	Potential-Impairing Reactions	219
2.10	Electrometric pH Measurements	220
2.10.1	Definition of pH	221
2.10.2	Principles of pH Measurement	223
2.10.3	Primary Standard Buffer Solutions – Assignment of pH(PS)	224
2.10.4	Secondary Standard Buffer Solutions – Assignment of pH(SS)	227
2.10.5	Calibration of pH Meter–Electrode Assemblies	228
2.10.6	Bracketing Procedure	229
2.10.7	Multiple-Point Calibration with Linear Regression	229
2.10.8	The Slope of Cells with Transference Containing Standard Buffer Solutions	230

2.10.9	Past Proposal of an Alternative pH Scale by BSI	234
2.10.10	International Recommendations of pH Measurement .	235
2.10.11	Measurement of Hydrogen Ion Concentrations	237
2.10.12	Reference Electrodes	238
2.10.13	The Meaning of the Uncertainty of pH Values	242
2.11	Application of Glass Electrodes in Heavy Water	242
2.11.1	Mechanism of pD Response	243
2.11.2	Deuteron Effect	245
2.11.3	Deuterium Oxide Effect	250

3. Electrochemistry of Glass-Forming Melts 269

3.1	Introduction <i>Friedrich G.K. Baucke</i>	269
3.2	Electrochemical Characterization <i>Friedrich G.K. Baucke</i> .	272
3.3	Basicity of Glass-Forming Melts <i>John Duffy</i>	275
3.3.1	Development of Basicity Concepts	275
3.3.2	Optical Basicity	278
3.3.3	Redox Reactions in Melts	289
3.4	Oxygen in Glass-Forming Melts <i>Friedrich G.K. Baucke</i> . . .	301
3.4.1	Electrochemical Cells for On-Line Measurement of Oxygen Partial Pressures	304
3.4.2	Measuring Electrodes	306
3.4.3	Reference Electrodes	308
3.4.4	Verification of the Thermodynamically Correct Response of Oxygen Sensors	313
3.4.5	Alternative Reference Electrodes	317
3.5	Application of Oxygen Sensors <i>Friedrich G.K. Baucke</i>	322
3.5.1	(Redox) Fining of Oxidic Glass-Forming Melts <i>Friedrich G.K. Baucke</i>	323
3.5.2	Thermodynamic Standard Data of Redox Equilibria <i>Friedrich G.K. Baucke</i>	330
3.5.3	Sulphate Fining <i>Detlef Köpsel</i>	346
3.5.4	Test of Technical Oxygen Sensors <i>Friedrich G.K. Baucke</i>	353
3.5.5	Electrolytic Fining <i>Friedrich G.K. Baucke</i>	359
3.6	Non-Isothermal Glass-Forming Melts <i>Friedrich G.K. Baucke</i>	367
3.6.1	Measurement of Thermoelectric Voltages – Standard Seebeck Coefficients	369
3.6.2	Application of Oxygen Sensors in Non-Isothermal Melts	374
3.6.3	Short-Circuited Platinum Parts in Non-Isothermal Melts	376
3.6.4	Decomposition of Oxidic Glass Melts by Short- Circuited Non-Isothermal Metal Electrodes	383

3.7	Arrangement for Displacing Electrochemical Reactions	
	<i>Friedrich G.K. Baucke</i>	385
3.8	Oxygen Bubble Formation at Melt/Refractory Interfaces	
	<i>Friedrich G.K. Baucke</i>	391
3.8.1	The Reaction Mechanism	392
3.8.2	A Subsurface Electrochemical Cell	394
3.8.3	General Reaction Mechanism, Technical Application .	405
3.9	The Conductivity of Glass-Forming Melts	
	<i>Friedrich G.K. Baucke</i>	408
3.9.1	A Critical Analysis of Reported Conductivity Cells ..	409
3.9.2	Conductance Cell Designed at Schott Glas	412
3.9.3	Application of the Schott Cell to Mixed-Alkali Glass Melts	416
