Introduction and Remarks

1	Aims of Ecological Science	1
2	Significance of Present-Day Ecology as a Philosophy	3
3	Human Impact on Ecosystems	4
4	Significance of Systematics and Taxonomy for Biology	5
5	Importance of Scientific Documentation	6
6	Importance of Excursions for Young Scientists	7

General Section

Ecological Fundamentals

1	Historical Perspective	12
2	Co-Evolution and Symbiosis	15
3	Biodiversity and Ecology of Populations	16
4	Climate and its Presentation (Homoclimates as well as Climate Diagram Maps)	19
5	Environment and Competition	25
6	Ecological Factors	33
7	Radiation, Light and Basic Astronomy Elements	34
8	Temperature	38
9	Water Relations of Plants and Vegetation – Poikilohydric and Homeohydric Plants and Adaptation to Water Deficit	42
10	Halophytes and Saline Soils, Halobiomes	56
11	Mineral Supply and Soils	64
12	Ecotypes and the Law of Biotope Change and Relative Constancy of Habitat	71
13	Azonal and Extrazonal Vegetation	73

Ecological Systems and Biology of Ecosystems

1	Geobiosphere and Hydrobiosphere	75
2	Hydrobiosphere	76
3	Classification of the Geobiosphere into Zonobiomes	78
4	Zonoecotones	80

5	Orobiomes	81
6	Pedobiomes	83
7	Hierarchy of Ecological Systems	84
8	Biome	86
9	Smaller Units of Ecological Systems: Biogeocenes and Synusiae	86
10	Biology and Characteristics of Ecosystems	89
11	Highly Productive Ecosystems	98
12	Special Features of Material Cycles in Different Ecosystems	101
13	Role of Fire for Ecosystems	102
14	Individual Zonobiomes and Their Distribution	104

Special Section

I	Zonobiome of the Evergreen Tropical Rain Forest (Zonobiome of the Equatorial Humid Diurnal Climate)	
1	Typical Climate in Zonobiome I	115
2	Soils and Pedobiomes	118
3	Vegetation	121
4	Different Types of Vegetation in Zonobiome I Around the Equator	141
5	Orobiome I – Tropical Mountains with a Diurnal Climate ...	145
6	Biogeocenes of Zonobiome I as Ecosystems ...	153
7	Fauna and Nutritional Chains in Zonobiome I .	155
8	Human Beings in Zonobiome I	156
9	Zonoecotone I/II – Semi-Evergreen Forest	159
II	Zonobiome of Savannas and Deciduous Forests and Grasslands (Zonobiome of the Humido-arid Tropical Summer Rain Region)	
1	General	163
2	Zonal Vegetation	166
3	Savannas (Trees and Grasses)	170
4	Parkland	178
5	Examples of Larger Savanna Regions	180
6	Ecosystem Research	188
7	Tropical Hydrobiomes in Zonobiomes I and II .	194
8	Mangroves as Halo-Helobiomes in Zonobiomes I and II	195
9	Shore Formations – Psammobiomes	200
10	Orobiome II – Tropical Mountains with an Annual Temperature Periodicity	201
11	Man in the Savanna	203
12	Zonoecotone II/III	203

III	Zonobiome of Hot Deserts	
	(Zonobiome of Subtropical Arid Climates)	
1	Climatic Subzonobiomes	211
2	Soils and Their Water Content	213
3	Substrate-Dependent Desert Types	216
4	Water Supply of Desert Plants	219
5	Ecological Types of Desert Plants	222
6	Productivity of Desert Vegetation	225
7	Desert Vegetation of the Various Floristic Realms.	227
8	Orobiome III – Desert Areas of the Subtropics .	245
9	Humans in Deserts	245
10	Zonoecotone III/IV – Semi-Deserts	246
IV	Zonobiome of Sclerophyllic Woodlands	
	(Zonobiome of the Arido-Humid Winter Rain Region)	
1	General	249
2	Historical Development of Zonobiome IV and Its Relationship with Zonobiome V	252
3	Mediterranean Region	255
4	Significance of Sclerophylly in Competition . .	260
5	Arid Mediterranean Subzonobiome	263
6	California and Neighbouring Regions	264
7	Central Chilean Winter Rain Region with Zonoecotone	269
8	South African Cape	274
9	South West and South Australia	276
10	Mediterranean Orobiome	281
11	Climate and Vegetation of the Canary Islands .	283
12	Man in Mediterranean Regions	291
V	Zonobiome of Laurel Forests (Zonobiome of the Warm-Temperate Humid Climate)	
1	General	295
2	Tertiary Forests, Lauriphyllly and Sclerophylly .	297
3	Humid Subzonobiomes on the East Coast of the Continents	298
4	Subzonobiome on the West Side of Continents .	302
5	Biome of <i>Eucalyptus-Nothofagus</i> Forests of South-Eastern Australia and Tasmania	304
6	Warm-Temperate Biome of New Zealand	306
VI	Zonobiome of Deciduous Forests	
	(Zonobiome of the Temperate Nemoral Climate)	
1	Leaf Shedding as Adaptation to Cold Winters .	309
2	Effect of Cold Winter Periods on Species of the Nemoral Zone	311
3	Distribution of Zonobiome VI	313

4	Atlantic Heath Regions	314
5	Deciduous Forests as Ecosystems (Biogeocenes)	320
6	Orobiome VI – Northern Alps and Alpine Forests and Tree Line	351
7	Zonoecotone IV/VII – Forest-Steppe	366
VII Zonobiome of Steppes and Cold Deserts (Zonobiome of the Arid-Temperature Climate)		
1	Climate	371
2	Soils of the East European Steppe Zone	372
3	Meadow Steppes on Thick Chernozem and Feather Grass Steppes	376
4	North American Prairie	379
5	Ecophysiology of Steppe and Prairie Species	383
6	Asiatic Steppes	387
7	Animal Life of the Steppe	388
8	Grass Steppes of the Southern Hemisphere	389
9	Subzonobiome of Semi-Deserts	393
10	Subzonobiome of Middle Asiatic Deserts	396
11	Karakum Desert	400
12	Orobiome VII (rIII) in Middle Asia	405
13	Subzonobiome of the Central Asiatic Deserts	408
14	Subzonobiome of Cold High Plateau Deserts of Tibet and Pamir (sZB VII, tIX)	410
15	Man in the Steppe	413
16	Zonoecotone VI/VIII – Boreonemoral Zone	414
VIII Zonobiome of the Taiga (Zonobiome of the Cold-Temperature Boreal Climate)		
1	Climate and Coniferous Species of the Boreal Zone	417
2	Oceanic Birch Forests in Zonobiome VIII	420
3	European Boreal Forest Zone	421
4	Ecology of Coniferous Forests	422
5	Siberian Taiga	428
6	Extreme Continental Larch Forests of Eastern Siberia with Thermokarst Formations	429
7	Orobiome VIII – Mountain Tundra	435
8	Mires of the Boreal Zone (Peinohelobiomes)	436
9	Ecology of Raised Bogs	440
10	The Western Siberian Lowlands – The Largest Bog Region of the Earth	442
11	Man in the Taiga	445
12	Zonoecotone VIII/IX (Forest Tundra) and the Polar Forest and Tree Line	445

IX	Zonobiome of the Tundra	
	(Zonobiome of the Arctic Climate)	
1	Climate and Vegetation of the Tundra	449
2	Ecophysiological Investigations	452
3	Animal Life in the Arctic Tundra	453
4	Man in the Tundra	456
5	The Cold Arctic Desert and Solifluction	457
6	Antarctic and Subantarctic Islands	460
	Summary and Conclusions	
1	Phytomass and Primary Production of the Various Vegetational Zones and of the Entire Biosphere	463
2	Conclusion from an Ecological Point of View . .	467
3	Population Explosion in Developing Countries .	468
4	Excessive Technological Developments in Industrial Countries	471
5	Sustainable Land Use	476
6	Large Programs and Global Programs	479
7	Testimonies	481
	References	485
	Explanations of Foreign Technical Words Used	503
	Subject Index	509
