Roger Godement

## Analysis I

## Convergence, Elementary functions

Translated from the French by Philip Spain

## Contents

Preface	V
I – Sets and Functions	1
§1. Set Theory	7
1 – Membership, equality, empty set	7
2 - The set defined by a relation. Intersections and unions	10
3 – Whole numbers. Infinite sets	13
4 – Ordered pairs, Cartesian products, sets of subsets	17
5 – Functions, maps, correspondences	19
6 – Injections, surjections, bijections	23
7 – Equipotent sets. Countable sets	25
8 – The different types of infinity	28
9 – Ordinals and cardinals	31
§2. The logic of logicians	39
II – Convergence: Discrete variables	45
§1. Convergent sequences and series	45
0 - Introduction: what is a real number?	45
$1 - $ Algebraic operations and the order relation: axioms of $\mathbb{R}$ .	53
2 – Inequalities and intervals	56
3 – Local or asymptotic properties	59
4 – The concept of limit. Continuity and differentiability	63
5 – Convergent sequences: definition and examples	67
6 – The language of series	76
7 – The marvels of the harmonic series	81
8 – Algebraic operations on limits	95
§2. Absolutely convergent series	98
9 - Increasing sequences. Upper bound of a set of real numbers	98
$10 - The function \log x$ . Roots of a positive number	
11 – What is an integral?	
12 – Series with positive terms	
13 – Alternating series	
14 – Classical absolutely convergent series	
15 – Unconditional convergence: general case	

16 – Comparison relations. Criteria of Cauchy and d'Alembert 132
17 – Infinite limits 138
18 – Unconditional convergence: associativity
§3. First concepts of analytic functions
19 – The Taylor series
20 – The principle of analytic continuation
21 – The function $\cot x$ and the series $\sum 1/n^{2k}$
22 – Multiplication of series. Composition of analytic func-
tions. Formal series 167
23 – The elliptic functions of Weierstrass
III – Convergence: Continuous variables
§1. The intermediate value theorem
1 – Limit values of a function. Open and closed sets 187
2 – Continuous functions
3 – Right and left limits of a monotone function
4 – The intermediate value theorem
§2. Uniform convergence
5 – Limits of continuous functions
6 – A slip up of Cauchy's 211
7 – The uniform metric
8 – Series of continuous functions. Normal convergence 220
§3. Bolzano-Weierstrass and Cauchy's criterion
9 – Nested intervals, Bolzano-Weierstrass, compact sets 225
10 – Cauchy's general convergence criterion
11 – Cauchy's criterion for series: examples
12 – Limits of limits 239
13 – Passing to the limit in a series of functions
§4. Differentiable functions
14 – Derivatives of a function
15 – Rules for calculating derivatives
$16$ – The mean value theorem $\dots \dots \dots$
17 – Sequences and series of differentiable functions 265
18 – Extensions to unconditional convergence
§5. Differentiable functions of several variables
19 – Partial derivatives and differentials
$20$ – Differentiability of functions of class $C^1$
21 – Differentiation of composite functions
22 - Limits of differentiable functions
23 – Interchanging the order of differentiation
24 – Implicit functions

1- Cartesian spaces and general metric spaces3032- Open and closed sets3063- Limits and Cauchy's criterion in a metric space; completespacesspaces3084- Continuous functions3115- Absolutely convergent series in a Banach space3136- Continuous linear maps3167- Compact spaces3208- Topological spaces322IV- Powers, Exponentials, Logarithms, Trigonometric Functions3251- Rational exponents3252- Definition of real powers3273- The calculus of real exponents3304- Logarithms to base a. Power functions3325- Asymptotic behaviour3336- Characterisations of the exponential, power and logarithmic functions3398- Derivatives of exponential functions: direct method3398- Derivatives of exponential functions: direct method3398- Derivatives of exponential functions: direct method342§2. Series expansions3459- The number e. Napierian logarithms34510- Exponential function as a limit36814- The power series for the logarithm35913- The exponential function as a limit36814- The power series for the logarithm35915- Euler's relation chez Euler38836- Hyperbolic functions37237- The ex	Appendix to Chapter III

Power functions3325 - Asymptotic behaviour3336 - Characterisations of the exponential, power and logarithmic functions3367 - Derivatives of the exponential functions: direct method3398 - Derivatives of exponential functions, powers and logarithms342§2. Series expansions3459 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	$1 - Rational exponents \dots 325$
4 - Logarithms to base a. Power functions3325 - Asymptotic behaviour3336 - Characterisations of the exponential, power and logarithmic functions3367 - Derivatives of the exponential functions: direct method3398 - Derivatives of exponential functions, powers and logarithms342§2. Series expansions3459 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{Arg}(z)$ and $\mathcal{Log} z$ 414	2 – Definition of real powers
5 - Asymptotic behaviour3336 - Characterisations of the exponential, power and logarithmic functions3367 - Derivatives of the exponential functions: direct method3398 - Derivatives of exponential functions, powers and logarithms342§2. Series expansions3459 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	3 – The calculus of real exponents
6 - Characterisations of the exponential, power and logarithmic functions3367 - Derivatives of the exponential functions: direct method3398 - Derivatives of exponential functions, powers and logarithms342§2. Series expansions3459 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	$4 - \text{Logarithms to base } a$ . Power functions $\dots \dots \dots \dots 332$
mic functions3367 - Derivatives of the exponential functions: direct method3398 - Derivatives of exponential functions, powers and logarithms342§2. Series expansions3459 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	5 – Asymptotic behaviour
7 - Derivatives of the exponential functions: direct method 3398 - Derivatives of exponential functions, powers and logarithms 342§2. Series expansions	
8 - Derivatives of exponential functions, powers and logarithms 342§2. Series expansions3459 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	
§2. Series expansions3459 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	
9 - The number e. Napierian logarithms34510 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	
10 - Exponential and logarithmic series: direct method34611 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	
11 - Newton's binomial series35112 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions388§3. Infinite products39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	9 – The number $e$ . Napierian logarithms
12 - The power series for the logarithm35913 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions388§3. Infinite products39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	10 - Exponential and logarithmic series: direct method 346
13 - The exponential function as a limit36814 - Imaginary exponentials and trigonometric functions37215 - Euler's relation chez Euler38316 - Hyperbolic functions388§3. Infinite products39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	11 – Newton's binomial series
14 - Imaginary exponentials and trigonometric functions 372 $15 -$ Euler's relation chez Euler	$12$ – The power series for the logarithm $\dots \dots \dots \dots 359$
$15 -$ Euler's relation chez Euler. $383$ $16 -$ Hyperbolic functions $388$ §3. Infinite products $394$ $17 -$ Absolutely convergent infinite products $394$ $18 -$ The infinite product for the sine function $397$ $19 -$ Expansion of an infinite product in series $403$ $20 -$ Strange identities $407$ §4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ $414$	
16 - Hyperbolic functions388§3. Infinite products39417 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	14 – Imaginary exponentials and trigonometric functions 372
§3. Infinite products	
17 - Absolutely convergent infinite products39418 - The infinite product for the sine function39719 - Expansion of an infinite product in series40320 - Strange identities407§4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ 414	16 – Hyperbolic functions
$18$ - The infinite product for the sine function $397$ $19$ - Expansion of an infinite product in series $403$ $20$ - Strange identities $407$ §4. The topology of the functions $\mathcal{A}rg(z)$ and $\mathcal{L}og z$ $414$	§3. Infinite products
19 - Expansion of an infinite product in series. $403$ $20 -$ Strange identities $407$ §4. The topology of the functions $Arg(z)$ and $Log z$ $414$	17 – Absolutely convergent infinite products
20 – Strange identities	18 – The infinite product for the sine function
20 – Strange identities
