Geometric Problems on Maxima and Minima

Birkhäuser
Boston • Basel • Berlin

Contents

Preface	vii
1 Methods for Finding Geometric Extrema	1
1.1 Employing Geometric Transformations	1
1.2 Employing Algebraic Inequalities	19
1.3 Employing Calculus	27
1.4 The Method of Partial Variation	38
1.5 The Tangency Principle	48
2 Selected Types of Geometric Extremum Problems	63
2.1 Isoperimetric Problems	63
2.2 Extremal Points in Triangle and Tetrahedron	72
2.3 Malfatti's Problems	80
2.4 Extremal Combinatorial Geometry Problems	88
3 Miscellaneous	95
3.1 Triangle Inequality	95
3.2 Selected Geometric Inequalities	96
3.3 MaxMin and MinMax	98
3.4 Area and Perimeter	99
3.5 Polygons in a Square	101
3.6 Broken Lines	101
3.7 Distribution of Points	102
3.8 Coverings	104
4 Hints and Solutions to the Exercises	105
4.1 Employing Geometric Transformations	105
4.2 Employing Algebraic Inequalities	124
4.3 Employing Calculus	136
4.4 The Method of Partial Variation	151

4.5	The Tangency Principle	161
4.6	Isoperimetric Problems	169
4.7	Extremal Points in Triangle and Tetrahedron	176
4.8	Malfatti's Problems	185
4.9	Extremal Combinatorial Geometry Problems	188
4.10	Triangle Inequality	197
4.11	Selected Geometric Inequalities	200
4.12	MaxMin and MinMax	212
4.13	Area and Perimeter	215
4.14	Polygons in a Square	233
4.15	Broken Lines	237
4.16	Distribution of Points	240
4.17	Coverings	250
Notation		255
Glossary of Terms		257
Bibliography		263
