Contents

Preface *XIII*

List of Contributors *XV*

1 **An Introduction to Block Copolymer Applications: State-of-the-Art and Future Developments** *1*
Sébastien Lecommandoux, Massimo Lazzari, and Guojun Liu
References *6*

2 **Guidelines for Synthesizing Block Copolymers** *9*
Daniel Taton and Yves Gnanou

2.1 Introduction *9*
2.2 Free-radical Polymerization *13*
2.3 Coupling Reactions of Homopolymers *13*
2.4 Sequential Anionic Polymerization *14*
2.5 Sequential Group Transfer Polymerization *16*
2.6 Sequential Cationic Polymerization *17*
2.7 Non-radical Metal-catalyzed Polymerization *18*
2.8 Controlled Radical Polymerization *19*
2.8.1 Atom Transfer Radical Polymerization (ATRP) *20*
2.8.2 Nitroxide-mediated Polymerization (NMP) *23*
2.8.3 Reversible Addition Fragmentation Chain Transfer (the RAFT Process) *25*
2.9 Switching from One Polymerization Mechanism to Another *27*
2.10 Use of "Dual" Initiators in Concurrent Polymerization Mechanisms *29*
2.11 Chemical Modification of Pre-formed Block Copolymers *30*
2.12 Methods for the Synthesis of Block Copolymers with a Complex Architecture *31*
2.13 Conclusion *33*
References *35*

Block Copolymers in Nanoscience. Massimo Lazzari, Guojun Liu, Sébastien Lecommandoux

ISBN: 3-527-31309-5

3 **Block Copolymer Vesicles** *39*
Alessandro Napoli, Diana Sebök, Alex Senti, and Wolfgang Meier

3.1 Introduction *39*
3.2 Chemistry of Vesicle-forming Block Copolymers *41*
3.3 Block Copolymer Vesicle Formation in Water *46*
3.4 Block Copolymer Vesicle Formation in Organic Solvents *48*
3.5 Properties of Polymer Vesicles *51*
3.5.1 Morphology and Size of Polymer Vesicles *51*
3.5.2 Membrane Properties *53*
3.5.2.1 Polymer Membrane Thickness *53*
3.5.2.2 Mechanical Properties of Polymer Vesicles *54*
3.5.2.3 Adhesion of Polymer Vesicles *57*
3.5.2.4 Fusion and Fission of Polymer Vesicles *58*
3.6 Functional Polymer Vesicles *59*
3.7 Biohybrid Polymer Vesicles *60*
3.7.1 Polypeptide-based Copolymer Vesicles *60*
3.7.2 Protein Incorporation into Polymer Vesicles *62*
3.8 Potential Applications of Polymer Vesicles *64*
3.9 Concluding Remarks *66*
References *66*

4 **Block Copolymer Micelles for Drug Delivery in Nanoscience** *73*
Younsoo Bae, Horacio Cabral, and Kazunori Kataoka
References *87*

5 **Stimuli-responsive Block Copolymer Assemblies** *91*
Jean-François Gohy

5.1 Introduction *91*
5.2 Stimuli-sensitive Micellization *92*
5.2.1 Temperature-sensitive Micellization *93*
5.2.2 pH-sensitive Micellization *95*
5.2.3 Ionic Strength Sensitive Micellization *98*
5.3 Stimuli-responsive Micelles *100*
5.4 Multi-responsive Micellar Systems *103*
5.5 Stimuli-responsive Thin Films from Block Copolymers *106*
5.6 Stimuli-responsive Block Copolymers in the Bulk *109*
5.7 Conclusions and Outlook *112*
References *114*

6 **Self-assembly of Linear Polypeptide-based Block Copolymers** *117*
Sébastien Lecommandoux, Harm-Anton Klok, and Helmut Schlaad

6.1 Introduction *117*
6.2 Solution Self-assembly of Polypeptide-based Block Copolymers *119*

6.2.1 Aggregation of Polypeptide-based Block Copolymers *119*
6.2.1.1 Polypeptide Hybrid Block Copolymers *119*
6.2.1.2 Block Copolypeptides *123*
6.2.2 Polypeptide-based Hydrogels *124*
6.2.3 Organic/Inorganic Hybrid Structures *124*
6.3 Solid-state Structures of Polypeptide-based Block Copolymers *126*
6.3.1 Diblock Copolymers *126*
6.3.1.1 Polydiene-based Diblock Copolymers *126*
6.3.1.2 Polystyrene-based Diblock Copolymers *127*
6.3.1.3 Polyether-based Diblock Copolymers *131*
6.3.1.4 Polyester-based Diblock Copolymers *133*
6.3.1.5 Diblock Copolypeptides *133*
6.3.2 Triblock Copolymers *134*
6.3.2.1 Polydiene-based Triblock Copolymers *134*
6.3.2.2 Polystyrene-based Triblock Copolymers *138*
6.3.2.3 Polysiloxane-based Triblock Copolymers *139*
6.3.2.4 Polyether-based Triblock Copolymers *140*
6.3.2.5 Miscellaneous *144*
6.4 Summary and Outlook *146*
References *147*

7 Synthesis, Self-assembly and Applications of Polyferrocenylsilane (PFS) Block Copolymers *151*
Xiaosong Wang, Mitchell A. Winnik, and Ian Manners

7.1 Introduction *151*
7.2 Synthesis of PFS Block Copolymers *152*
7.3 Solution Self-assembly of PFS Block Copolymers *158*
7.4 Shell Cross-linked Nanocylinders and Nanotubes *161*
7.5 Self-assembly of PFS Block Copolymers in the Solid State *164*
7.6 Summary *166*
References *167*

8 Supramolecular Block Copolymers Containing Metal–Ligand Binding Sites: From Synthesis to Properties *169*
Khaled A. Aamer, Raja Shunmugan, and Gregory N. Tew

8.1 Introduction *169*
8.2 Block Copolymers with Chain-end Containing Metal Complexes *172*
8.2.1 Metal Complexes in the Center of Star Polymers *172*
8.2.2 Supramolecular Diblock Copolymers Connected by Metal Complexes *174*
8.3 Block Copolymers with Side-chain Metal Complexes in One Block *178*
8.3.1 Polymerizing Pre-formed Metal Complexes *178*
8.3.2 Block Copolymers Containing Free Metal–Ligand Side-chains *180*
8.3.2.1 Polymerization of Metal–Ligand Containing Monomers *180*

8.3.2.2 Post-polymerization Attachment of the Metal–Ligand *184*
8.4 Conclusion *187*
References *187*

9 Methods for the Alignment and the Large-scale Ordering of Block Copolymer Morphologies *191*
Massimo Lazzari and Claudio De Rosa

9.1 Introduction *191*
9.1.1 Motivation *191*
9.1.2 Organization of the Chapter *192*
9.2 How to Help Phase Separation *193*
9.3 Orientation by External Fields *195*
9.3.1 Mechanical Flow Fields *196*
9.3.2 Electric and Magnetic Fields *197*
9.3.3 Solvent Evaporation and Thermal Gradient *202*
9.4 Templated Self-assembly on Nanopatterned Surfaces *203*
9.5 Epitaxy and Surface Interactions *205*
9.5.1 Preferential Wetting and Homogeneous Surface Interactions *205*
9.5.2 Epitaxy *206*
9.5.3 Directional Crystallization *209*
9.5.4 Graphoepitaxy and Other Confining Geometries *212*
9.5.5 Combination of Directional Crystallization and Graphoepitaxy *214*
9.5.6 Combination of Epitaxy and Directional Crystallization *215*
9.6 Summary and Outlook *223*
References *225*

10 Block Copolymer Nanofibers and Nanotubes *233*
Guojun Liu

10.1 Introduction *233*
10.2 Preparation *235*
10.2.1 Nanofiber Preparation *235*
10.2.2 Nanotube Preparation *238*
10.3 Solution Properties *240*
10.4 Chemical Reactions *247*
10.4.1 Backbone Modification *247*
10.4.2 End Functionalization *251*
10.5 Concluding Remarks *253*
References *254*

11 Nanostructured Carbons from Block Copolymers *257*
Michal Kruk, Chuanbing Tang, Bruno Dufour, Krzysztof Matyjaszewski, and Tomasz Kowalewski

11.1 Introduction *257*
11.2 Discussion *259*

11.2.1 Well Defined PAN Polymers and Copolymers *259*
11.2.2 Carbon Films from Phase-separated Block Copolymers *260*
11.2.3 Carbon Nanoobjects from Water-soluble Precursors *265*
11.2.4 Nanoporous Carbon from Block Copolymers Using Silica as an Auxiliary Component *266*
11.2.5 Nanoporous Carbon from Phase-separated Block Copolymers *268*
11.2.6 Carbons Synthesized Using Other Block Copolymers *270*
11.3 Conclusion *271*
References *272*

12 Block Copolymers at Interfaces *275*
Mark Geoghegan and Richard A. L. Jones

12.1 Introduction *275*
12.2 Block Copolymer Films *277*
12.3 Block Copolymers on Heterogeneous Surfaces *278*
12.4 Environmental Control of Block Copolymer Films *279*
12.5 Block Copolymer Brushes *282*
12.6 Surface Regeneration *286*
12.7 Conclusions and Outlook *286*
References *287*

13 Block Copolymers as Templates for the Generation of Mesostructured Inorganic Materials *291*
Bernd Smarsly and Markus Antonietti

13.1 Introduction *291*
13.2 General Mechanism *292*
13.3 Details of the BC Templating Mechanism *298*
13.4 Crystalline, Mesoporous Metal Oxides *299*
13.5 Mesoporous Metals *304*
13.6 Conclusion and Outlook *304*
References *305*

14 Mesostructured Polymer–Inorganic Hybrid Materials from Blocked Macromolecular Architectures and Nanoparticles *309*
Marleen Kamperman and Ulrich Wiesner

14.1 Introduction *309*
14.2 AB Diblock Copolymers as Structure-directing Agents for Aluminosilicate Mesostructures *310*
14.2.1 Formation Mechanisms *313*
14.2.2 Flow-induced Alignment of Mesostructured Block Copolymer–Sol Nanoparticle Co-assemblies *316*
14.3 Generalization to Other Blocked Macromolecular Amphiphiles as Structure-directing Agents for Mesostructured Materials *319*

14.4 Generalization to Other Inorganic Materials Systems *322*
14.4.1 Mesoporous Aluminosilicate Materials with Superparamagnetic γ-Fe_2O_3 Particles Embedded in the Walls *322*
14.4.2 Ordered Mesoporous Ceramics Stable up to 1500 °C from Diblock Copolymer Mesophases *324*
14.5 Generalization from Bulk Mesostructured Hybrids to Mesostructured Thin Films *328*
14.6 Conclusions *331*
References *332*

15 Block Ionomers for Fuel Cell Application *337*
Olivier Diat and Gérard Gebel

15.1 Introduction *337*
15.2 Definitions and Investigations *342*
15.3 Polymer Modification *344*
15.3.1 Post-sulfonation *344*
15.3.2 Grafting *345*
15.3.3 Blends *346*
15.4 Copolymerization of Functionalized Monomers *347*
15.4.1 Main-chain Type Co-ionomer *347*
15.4.1.1 Sulfonated Polyimides *347*
15.4.1.2 Polyarylene Systems *351*
15.4.2 "Side Chain" Co-ionomers *353*
15.5 Di- and Triblock Ionomers *357*
15.6 Conclusion *362*
References *363*

16 Structure, Properties and Applications of ABA and ABC Triblock Copolymers with Hydrogenated Polybutadiene Blocks *367*
Vittoria Balsamo, Arnaldo Tomás Lorenzo, Alejandro J. Müller, Sergio Corona-Galván, Luisa M. Fraga Trillo, and Valentín Ruiz Santa Quiteria

16.1 Introduction *367*
16.2 Applications of SEBS Triblock Copolymers *371*
16.2.1 Adhesives, Sealants and Coatings *372*
16.2.2 Bitumen Modification *373*
16.2.3 Compounding and Plastic Modification *375*
16.2.4 Miscellaneous Applications *377*
16.2.4.1 Gels and Nanocomposites *377*
16.2.4.2 Medical Applications *378*
16.2.5 Future Trends *379*
16.3 Semicrystalline Triblock Copolymers with One or More HPB Blocks *379*
16.3.1 Semicrystalline ABA Triblock Copolymers *380*

16.3.2 Semicrystalline ABC Triblock Copolymers *381*
16.4 Conclusions *387*
References *388*

17 Basic Understanding of Phase Behavior and Structure of Silicone Block Copolymers and Surfactant–Block Copolymer Mixtures *391*
Carlos Rodríguez, Arturo López-Quintela, Md. Hemayet Uddin, Kenji Aramaki, and Hironobu Kunieda†

17.1 Introduction *391*
17.2 General Aspects of Phase Behavior and Liquid Crystal Phases *393*
17.3 Phase Behavior and Microstructure of $Si_mC_3EO_n$ Melts *395*
17.4 Phase Behavior and Microstructure $Si_mC_3EO_n$ in Water *400*
17.4.1 Phase Diagrams of Water–$Si_mC_3EO_n$ Systems as a Function of Temperature *400*
17.4.2 Phase Diagrams of Water–$Si_mC_3EO_n$ Systemsas a Function of PEO Chain Length *402*
17.4.3 Phase Diagram of Water–$Si_mC_3EO_{51.6}$ System as a Function of PDMS Chain Length *403*
17.4.4 Effect of PEO and PDMS Chain Lengths on the Effective Cross-sectional Area per Copolymer Molecule, a_P *404*
17.5 Phase Behavior of $Si_mC_3EO_n$ in Non-polar Oil *406*
17.6 Phase Behavior of $Si_mC_3EO_n$ in Non-aqueous Polar Solvents *408*
17.7 Mixing of Poly(oxyethylene)–Poly(dimethylsiloxane) Copolymer and Non-ionic Surfactant in Water *410*
17.8 Conclusions and Outlook *415*
References *415*

Subject Index *419*
