

Table of Contents

Unit 1	Applied Geology What a study course in the UK looks like	1
Unit 2	Geotechnology What is geotechnology?	6
Unit 3	Geotechnical Engineering Another engineering course	8
Unit 4	Geoengineering The role of geoengineers in construction	13
Unit 5	The Rock Cycle A model to describe the formation of different rock types	19
Unit 6	Rocks and Rock Mechanics General principles of rock mechanics	24
Unit 7	Plate Tectonics, Tectonics and Faultings Theories to describe the movement of the Earth	28
Unit 8	Earthquakes The intensity and magnitude of the shaking of the Earth	34
Unit 9	Volcanoes Local devastation by volcanic eruptions	40
Unit 10	Tsunamis The role of geologists to predict geohazards	49

Table of Contents

Unit 11	Soil Sciences and Soil Studies The composition of soils	55
<hr/>		
Unit 12	Soil Testing Equipment I Soil compaction and bearing capacity	62
<hr/>		
Unit 13	Soil Testing Equipment II Stress measurement methods	65
<hr/>		
Unit 14	Mineralogy I What makes a mineral?	68
<hr/>		
Unit 15	Mineralogy II Properties of minerals	73
<hr/>		
Unit 16	Mineralogy III Diamond. The ultimate mineral	76
<hr/>		
Unit 17	Minerals in Industry and Economy Why are minerals so important?	80
<hr/>		
Unit 18	Tara Mines I. A Zinc and Lead Mine in Ireland Exploration and extraction of minerals	85
<hr/>		
Unit 19	Tara Mines II Mining and production of minerals	90
<hr/>		
Unit 20	Tara Mines III Processing of minerals	94
<hr/>		
Unit 21	Minerals Recycling Resource conversation and economic considerations	97

Table of Contents

Unit 22	Energy Sources I Non-renewable sources: the fossil fuels coal, oil and natural gas	101
Unit 23	Energy Sources II Geothermal Energy - Energy from the interior of the Earth	108
Unit 24	Energy Sources III Other renewable energy sources for power generation	113
Unit 25	Drilling Techniques From hand augers to rotary core barrel drills	115
Unit 26	Rehabilitation Restoration of landscape as a sustainable development	120
Unit 27	Hydrogeology Water as a source of life	125
Unit 28	The Water Cycle A model about the supply of water	129
Unit 29	The Groundwater System How geologists locate groundwater	134
Unit 30	Groundwater Modelling System A geoengineering groundwater software program	137
Unit 31	Water Quality Testing equipment	141
Unit 32	Waste Water Treatment How do waste water treatment plants work?	145

Table of Contents

Unit 33	Waste Disposal Waste management and geoengineering	150
Unit 34	Meteorology and Climatology An introduction to weather and climate phenomena	156
Unit 35	The Carbon Cycle The natural transfer of carbon dioxide	159
Unit 36	Global Warming and Climate Change The human impact on the environment	162
Unit 37	Global Response to Climate Change Statements and conclusions	168
Unit 38	Glossary Creation of one's own geology glossary	174
	Index	183
	Solution	187
	Selected Reference List	207
	Credits	209
