V. Abbreviations	xv
1 Introduction	1
2 Economic theory for analysing vegetable supply in Thailand	3
2.1 AGRICULTURE IN A RAPIDLY GROWING ECONOMY	3
2.2 LOCATION THEORIES	7
2.2.1 <i>Theories on the spatial structure of the economy</i>	8
2.2.2 <i>A partial model of the location of agriculture</i>	8
2.2.3 <i>Total models of the von Thünen type</i>	15
2.3 THEORIES ON THE SPATIAL MOBILITY OF GOODS	17
2.4 COMPUTABLE MODELS OF REGIONAL SUPPLY AND DEMAND EQUILIBRIUM	20
2.5 REVIEW OF AGRICULTURAL SECTOR MODELS AND APPLICATIONS IN THAILAND	22
3 Factors influencing supply and demand	27
3.1 DEVELOPMENT TRENDS OF AGRICULTURE	27
3.2 TRENDS IN VEGETABLE PRODUCTION	31
3.2.1 <i>Characteristics</i>	31
3.2.2 <i>Spatial structure of vegetable production</i>	34
3.2.3 <i>Trend analysis</i>	37
3.3 CHARACTERISTICS OF PRODUCTION SYSTEMS	40
3.3.1 <i>Resource use</i>	40
3.3.2 <i>Farming systems</i>	48
3.3.3 <i>Farm structure</i>	52
3.3.4 <i>Alternative production systems</i>	54
3.4 VEGETABLE DEMAND	57
3.4.1 <i>Domestic demand</i>	57
3.4.2 <i>Export and import</i>	60
3.5 TRANSPORT AND MARKETING	61
3.6 TRANSPORTATION SYSTEM	64
3.7 SUMMARY	66
4 Conceptual Framework	67
4.1 CHOICE OF MODELLING APPROACH	67
4.2 A REGIONAL PROGRAMMING MODEL OF VEGETABLE SUPPLY IN THAILAND (TVSM)	70
4.2.1 <i>Definition of model boundaries</i>	70
4.2.2 <i>Mathematical structure of the model</i>	71
4.2.3 <i>Model calibration</i>	74
4.2.4 <i>Model regions and transport distance</i>	81
4.2.5 <i>Environmental indicators</i>	84

4.2.6	<i>Data collection</i>	85
4.3	PRIMARY DATA COLLECTION AND RESULTS	90
4.3.1	<i>Indicative survey</i>	90
4.3.2	<i>Using expert workshops for typical farm definition and parameter elicitation</i>	92
4.3.3	<i>Crop budgets</i>	99
4.4	EXOGENOUS VARIABLES AND POLICY INSTRUMENTS FOR ANALYSIS	102
4.4.1	<i>Demand side factors</i>	102
4.4.2	<i>Increasing fuel prices and transportation system</i>	105
4.4.3	<i>Reduction target for the environmental impact of pesticide use</i>	106
4.4.4	<i>A likely scenario for 2011</i>	106
4.5	SUMMARY	107
5	Results	109
5.1	BASE SCENARIO OF THE MODEL	109
5.1.1	<i>Regional distribution of vegetable production</i>	109
5.1.2	<i>Land and labour allocation</i>	113
5.1.3	<i>Environmental indicators</i>	117
5.2	EFFECTS OF EXOGENOUS VARIABLES ON SUPPLY RESPONSE	123
5.2.1	<i>Demand factors: Income and population growth</i>	123
5.2.2	<i>Supply side factors</i>	135
5.3	IMPACT OF SELECTED POLICIES ON VEGETABLE PRODUCTION	152
5.3.1	<i>Implementation of a fixed pesticide reduction target</i>	152
5.3.2	<i>Effect of pesticide taxation based on an environmental impact indicator</i>	163
5.3.3	<i>Effects of a zoning policy banning vegetable production from the peri-urban fringe</i>	166
5.4	A SCENARIO FOR 2011	175
5.4.1	<i>Regional distribution of vegetable production</i>	176
5.4.2	<i>Marginal cost of vegetable supply</i>	178
5.4.3	<i>Utilization of farm land and labour</i>	179
5.4.4	<i>Selected environmental indicators</i>	182
5.4.5	<i>Sub-regional implications of the forecast 2011 scenario</i>	185
6	Summary and conclusions	192
6.1	SUMMARY	192
6.2	POLICY IMPLICATIONS	197
6.3	FURTHER RESEARCH NEEDS	198
7	References	200
8	Appendix	215
