Summary	5
1 Introduction	7
1.1 Solar corona	7
1.1.1 Temperature and density	8
1.1.2 Magnetic field observations	11
1.1.3 Plasma β and magnetic field extrapolation	11
1.2 Solar wind	16
1.2.1 Corotating interaction regions	18
1.2.2 Coronal mass ejections	18
1.2.3 Flux ropes	20
2 Magnetic field extrapolations in the solar corona	25
2.1 Linear force-free model extrapolation	26
2.2 Magnetohydrostatic (MHS) model	31
2.2.1 Mathematics of the MHS model	34
2.2.2 Application of the MHS model to the corona	38
3 Observations of the HCS, CIRs, ICMEs and a flux rope in the solar wind	49
3.1 Minimum Variance Analysis (MVA)	49
3.2 Parker Spiral and Heliospheric Current Sheet (HCS)	51
3.2.1 Formation of the Parker spiral	51
3.2.2 In situ observations of the HCS	53
3.3 Corotating Interaction Regions (CIRs) and Interplanetary Coronal Mass Ejections (ICMEs)	53
3.4 Flux rope	59
3.4.1 Magnetic field and particle observations of a flux rope in the solar wind	63
3.4.2 Discussion of the magnetic field and particle signatures, and the generation mechanisms of the flux rope	71
4 Conclusions	77
A Mathematical details of the linear force-free model	81
B Mathematical details of the Magnetohydrostatic(MHS) model	83
