

Contents

1	First Steps	1
1.1	Groups Acting on Vector Spaces and Coordinate Rings	2
1.1.1	V Versus V^*	4
1.2	Constructing Invariants	6
1.3	On Structures and Fundamental Questions	7
1.4	Bounds for Generating Sets	7
1.5	On the Structure of $\mathbb{K}[V]^G$: The Non-modular Case	8
1.6	Structure of $\mathbb{K}[V]^G$: Modular Case	9
1.7	Invariant Fraction Fields	10
1.8	Vector Invariants	11
1.9	Polarization and Restitution	11
1.10	The Role of the Cyclic Group C_p in Characteristic p	16
1.11	C_p Represented on a 2 Dimensional Vector Space in Characteristic p	17
1.12	A Further Example: C_p Represented on $2V_2$ in Characteristic p	20
1.13	The Vector Invariants of V_2	23
2	Elements of Algebraic Geometry and Commutative Algebra	25
2.1	The Zariski Topology	25
2.2	The Topological Space $\text{Spec}(S)$	27
2.3	Noetherian Rings	27
2.4	Localization and Fields of Fractions	29
2.5	Integral Extensions	29
2.6	Homogeneous Systems of Parameters	30
2.7	Regular Sequences	31
2.8	Cohen-Macaulay Rings	32
2.9	The Hilbert Series	34
2.10	Graded Nakayama Lemma	35
2.11	Hilbert Syzygy Theorem	36

3	Applications of Commutative Algebra to Invariant Theory	39
3.1	Homogeneous Systems of Parameters	40
3.2	Symmetric Functions	44
3.3	The Dickson Invariants	45
3.4	Upper Triangular Invariants	46
3.5	Noether's Bound	46
3.6	Representations of Modular Groups and Noether's Bound	48
3.7	Molien's Theorem	50
3.7.1	The Hilbert Series of the Regular Representation of the Klein Group	51
3.7.2	The Hilbert Series of the Regular Representation of C_4	53
3.8	Rings of Invariants of p -Groups Are Unique Factorization Domains	54
3.9	When the Fixed Point Subspace Is Large	55
4	Examples	59
4.1	The Cyclic Group of Order 2, the Regular Representation	61
4.2	A Diagonal Representation of C_2	62
4.3	Fraction Fields of Invariants of p -Groups	62
4.4	The Alternating Group	64
4.5	Invariants of Permutation Groups	65
4.6	Göbel's Theorem	66
4.7	The Ring of Invariants of the Regular Representation of the Klein Group	69
4.8	The Ring of Invariants of the Regular Representation of C_4	72
4.9	A 2 Dimensional Representation of C_3 , $p = 2$	75
4.10	The Three Dimensional Modular Representation of C_p	75
4.10.1	Prior Knowledge of the Hilbert Series	76
4.10.2	Without the Use of the Hilbert Series	78
5	Monomial Orderings and SAGBI Bases	83
5.1	SAGBI Bases	85
5.1.1	Symmetric Polynomials	89
5.2	Finite SAGBI Bases	91
5.3	SAGBI Bases for Permutation Representations	93
6	Block Bases	99
6.1	A Block Basis for the Symmetric Group	101
6.2	Block Bases for p -Groups	103
7	The Cyclic Group C_p	105
7.1	Representations of C_p in Characteristic p	105
7.2	The C_p -Module Structure of $\mathbb{F}[V_n]$	110
7.2.1	Sharps and Flats	110
7.3	The C_p -Module Structure of $\mathbb{F}[V]$	113

7.4	The First Fundamental Theorem for V_2	115
7.4.1	Dyck Paths and Multi-Linear Invariants	117
7.4.2	Proof of Lemma 7.4.3	122
7.5	Integral Invariants	124
7.6	Invariant Fraction Fields and Localized Invariants	130
7.7	Noether Number for C_p	132
7.8	Hilbert Functions	138
8	Polynomial Invariant Rings	141
8.1	Stong's Example	147
8.2	A Counterexample	148
8.3	Irreducible Modular Reflection Groups	149
8.3.1	Reflection Groups	150
8.3.2	Groups Generated by Homologies of Order Greater than 2	151
8.3.3	Groups Generated by Transvections	151
9	The Transfer	153
9.1	The Transfer for Nakajima Groups	164
9.2	Cohen-Macaulay Invariant Rings of p -Groups	170
9.3	Differents in Modular Invariant Theory	173
9.3.1	Construction of the Various Different Ideals	174
10	Invariant Rings via Localization	179
11	Rings of Invariants which are Hypersurfaces	185
12	Separating Invariants	191
12.1	Relation Between $\mathbb{K}[V]^G$ and Separating Subalgebras	195
12.2	Polynomial Separating Algebras and Serre's Theorem	198
12.3	Polarization and Separating Invariants	201
13	Using SAGBI Bases to Compute Rings of Invariants	205
14	Ladders	211
14.1	Group Cohomology	213
14.2	Cohomology and Invariant Theory	214
