Toshikazu Takeda, Mitsuru Kageyama and Yoshinori Homma ........................................ 141
Experimental Studies on Structural Characteristics of a Cable-Reinforced Air-Supported Structure
Yasuzo Fukao, Yoshiteru Iwasa, Yoshihiro Mataka and Akira Okada .................................. 149
Experimental Test and Stimulation Analyses of the Dynamic Behavior of Low-Profile, Cable-Reinforced, Air-Supported Structures
R.K. Müller ......................................................................................................................... 157
Model tests as an Aid to Design and Construction of Membrane Structures
Hideki Magara and Kiyoshi Okamura .................................................................................. 161
A Study on Modeling and Structural Behavior of Membrane Structures
Masaru Yamagishi and Choichiro Hoshi ................................................................................. 169
Connection of Membrane Material Employing Point-Supporting System
Nobuhiko Ishizu and Hirokazu Minami .................................................................................. 177
A Method of Measurement of Actual Membrane Tensile Stress
Willy De Wilde, Marijke Mollaert and Iris Tommelein ........................................................ 185
Some Problems Encountered in the Use of Composite Materials and Textiles in Cable Stayed Membrane Structures
Kohichi Itoh, Kohtaro Tanaka and Yoshiaki Ohuchi .............................................................. 193
An Experimental Study on Tension Characteristics of Suspension Membranes
Hirokazu Minami, Hiroshi Toyoda, Kiyotaka Kotera and Shinya Segawa ................................. 201
Some Reviews on Methods for Evaluation of Performance of Membrane Materials Being Used for Membrane Structures
G.A. Stevens and J.J. Fendley ................................................................................................. 209
Dual-Skin Structures Using Optically-Selective Materials
P.S. Han and M.D. Olson ......................................................................................................... 217
Static Analysis of Pneumatic Structures Loaded by Wind
Masanao Nakayama, Tosio Suzuki, Kazuo Ishii and Kazuhiko Satoh ......................................... 225
Wind Tunnel Test on Spherical Pneumatic Structures
Sumio Kawamura and Tatsuhiko Kiuchi ................................................................................. 233
Wind Design Method of Air Supported Structures
Yasuushi Uematsu and Kazuo Uchiyama ................................................................................. 241
Aeroelastic Behavior of an H.P.-Shaped Suspended Roof
Eiji Kimoto and Sumio Kawamura ......................................................................................... 249
Aerodynamic Criteria of Hanging Roofs for Structural Design
Masao Saitoh ......................................................................................................................... 257
Hybrid Form-Resistant Structures
David Geiger, Andrew Stefaniuk and David Chen ................................................................. 265
The Design and Construction of Two Cable Domes for the Korean Olympics
Shi-Zhao Shen and You-Wen Zhang ...................................................................................... 273
Theoretical and Experimental Study of Cable-Arch System — A New Type of Mixed Structures
Shigeru Ban, Haruji Tsubota, Kazuo Kurihara and Arata Yoshida ........................................... 281
Experimental Investigation of a Tensile Fabric Structure
Peter E. Ellen .......................................................................................................................... 289
Post-Tensioning of Steel Structures
J. Ma and H.L. Zhao .............................................................................................................. 297
An Investigation on the Characteristics of a Truss (Grid), Plate (Shell) and Cable-Suspended Composite Structure
Koryo Miura, Michihiro Natori and Masamori Sakamaki ...................................................... 305
Technological Developments on Large Membrane Structures in Space
Yutaka Murata ....................................................................................................................... 313
A Development from the Mesh Membrane Method for a Pneumatic Structure
Kenichi Sugizaki .................................................................................................................... 317
Structural Design of a Permanent Air-Supported Dome
Akira Okada and Yasuzo Fukao ............................................................................................ 325
An Approach to Internal Pressure Control of Low-Profile Cable-Reinforced Air-Supported Structures
Robert Krapfenbauer 333
Membrane Structures for Exhibition Buildings
Norihiro Ikemoto, Yoshihiro Mizoguchi, Masahisa Fujikake, Osamu Kojima and Minoru Hirota 341
Development of a Design System for Fabric Tension Structures
Masao Saitoh, Fumio Kuroki, Norihide Imagawa and Kohichi Itoh 349
The Analysis, Design, and Construction of a Suspension Roof for Tsukuba Expo ’85
Josef Poštulka 357
Economical Ice-Halls with Hanging Roof
Tianjian Ji 365
Design and Analysis of Orthogonal Cable-Net Roofs with Complex Shape
O.G. Sulaberidze, Yu.K. Melashvili and Z.D. Lartsuliani 373
Cable-Net Windbreaker Systems
Authors Index 377
