

TECHNISCHE UNIVERSITÄT  
KAISERSLAUTERN

Studying Oxygen Signal Transduction:  
Role of Arsenite

Dissertation

genehmigt vom Fachbereich Chemie der Technischen Universität  
Kaiserslautern zur Verleihung des akademischen Grades  
*"Doktor der Naturwissenschaften"*  
(D 386)

vorgelegt von

**Zukaa Altaieb**

Kaiserslautern, Januar 2011

Betreuer

Herr Prof. Dr. Thomas Kietzmann

## Table of contents

<b>1</b>	<b>INTRODUCTION</b>	<b>1</b>
1.1	Molecular mechanisms of oxygen sensing	1
1.1.1	ROS, NADPH oxidase and oxygen sensing	2
1.2	Enzymes involved in the production of NADPH	3
1.2.1	Isocitrate dehydrogenase (IDH)	3
1.2.2	Glucose 6-phosphate dehydrogenase (G6PDH)	4
1.2.3	Malic enzyme (ME)	5
1.3	Hypoxia-inducible factor-1 (HIF) family	5
1.3.1	Hypoxia-inducible factor-1 (HIF-1)	5
1.3.2	HIF-2 $\alpha$ and HIF-3 $\alpha$	7
1.3.3	HIF-1 and HIF-2 target genes	8
1.3.4	Regulation of HIF-1 subunits	10
1.3.4.1	Oxygen-dependent HIF-1 $\alpha$ regulation	10
1.4	The alpha-ketoglutarate dehydrogenase complex	12
1.5	Arsenite	14
1.6	Aim of the study	15
<b>2</b>	<b>MATERIALS</b>	<b>16</b>
2.1	Cells, bacterial strains, plasmid constructs and vectors	16
2.1.1	Cells	16
2.1.2	Bacterial strains	17
2.1.3	Vectors and plasmid constructs	18
2.1.3.1	pGL3-Promoter constructs	18
2.1.3.2	pG5E1B-Luc	19
2.1.3.3	pcDNA3.1/V5-His-TOPO	19
2.1.3.4	pcDNA6/Myc-His constructs	20
2.1.3.5	psiSTRIKE <sup>TM</sup> -Neomycin vector construct	22
2.1.3.6	pLVTHM vector constructs	22
2.2	Oligonucleotides	24
2.2.1	Oligonucleotides for sequencing	24
2.2.2	Oligonucleotides for small interfering RNA (siRNA)	24
2.2.3	PCR primers	24
2.4	Digoxigenin-labeled RNA probes	25
2.5	Enzymes	25

2.6	Antibodies	25
2.6.1	Primary antibodies	26
2.6.2	Secondary antibodies	26
2.7	Stock solutions	27
2.7.1	Medium for bacteria	28
2.8	Chemicals	28
2.9	Consumables	30
2.10	Kits	30
2.11	Devices	31
2.12	Software	32
<b>3</b>	<b>METHODS</b>	<b>33</b>
3.1	Molecular biological methods	33
3.1.1	Polymerase chain reaction (PCR)	33
3.1.1.1	Amplification parameters	33
3.1.1.2	Purification of PCR products	34
3.1.1.3	Cloning procedures	34
3.1.2	Cloning and cDNA amplification of ME1, G6PDH, IDH1 and IDH2	34
3.1.3	RNA interference (RNAi)	34
3.1.3.1	Dilution of oligonucleotides and annealing	35
3.1.3.2	Dilution of the annealed oligonucleotides	36
3.1.3.3	Ligation reaction	36
3.1.3.4	DNA sequencing	36
3.1.4	Preparation of ultra-competent cells	36
3.1.5	Transformation of competent cells	37
3.1.6	LB-agar plate	37
3.1.7	Preparation of plasmid DNA	38
3.1.7.1	Small-scale preparation of plasmid DNA (Mini-preparation)	38
3.1.7.2	Large-scale preparation of plasmid DNA (Maxi-preparation)	39
3.1.8	Determination of nucleic acid concentration	40
3.1.9	Restriction analysis	40
3.1.9.1	Agarose gel electrophoresis	41
3.2	Cell biological methods	41
3.2.1	Cell culture and medium	41
3.2.1.1	Freezing of cells	42
3.2.2	Cell transfection and luciferase assay	42
3.2.2.1	Calcium phosphate transfection	42

3.2.2.2	Transfection of cells by using metafectene	43
3.2.2.3	Establishment of stable cell lines	44
3.2.2.4	Luciferase reporter gene assay	44
3.2.3	shRNA producing lentiviral particles and transduction of cell lines	45
3.2.4	Treatment of cells with arsenite	46
3.2.5	RNA isolation from cultured cells	46
3.2.6	Preparation of digoxigenin-labeled RNA probes	47
3.2.6.1	<i>In vitro</i> transcription	48
3.2.6.2	Detection and estimation of labeling efficiency	48
3.2.7	Northern blot	48
3.2.7.1	Agarose gel electrophoresis of RNA	49
3.2.7.2	Visualization of RNA with ethidium bromide staining	49
3.2.7.3	Transfer of RNA onto nylon membranes (blotting)	50
3.2.7.4	Hybridization of RNA blots with digoxigenin-labeled RNA probes	51
3.2.7.5	Detection and quantification	52
3.2.8	Protein isolation from cell cultures	53
3.2.9	Determination of protein concentration	53
3.2.10	Denaturation of protein	54
3.2.11	Immunoblotting (Western blot)	54
3.2.11.1	Denaturing SDS-polyacrylamide gel electrophoresis	54
3.2.11.2	Transfer of proteins onto nitrocellulose membranes	56
3.2.11.3	Detection of proteins with specific antibodies	56
3.3	Biochemical methods	58
3.3.1	Enzymatic assay of $\alpha$ -ketoglutarate dehydrogenase	58
3.3.1.1	Preparation of cell lysates	58
3.3.1.2	Measuring $\alpha$ KGDH activity	58
3.3.2	Measuring reactive oxygen species (ROS)	60
3.3.3	GSH assay	61
3.3.4	Cell proliferation assay	62
3.3.4.1	Resazurin reduction assay	62
3.3.4.2	BrdU cell proliferation assay	62
3.3.4.3	MTT assay	63
<b>4</b>	<b>RESULTS</b>	<b>64</b>
4.1	Alpha-ketoglutarate dehydrogenase ( $\alpha$ KGDH) inhibition: Effects on hypoxia-inducible factor-1 $\alpha$ (HIF-1 $\alpha$ )	64

4.1.1	Inhibition of purified and cellular HepG2 $\alpha$ KGDH enzyme activity by arsenite As(III)	64
4.1.2	Effect of As(III) on $\alpha$ KGDH mRNA levels in HepG2 cells	65
4.1.3	Knockdown of $\alpha$ KGDH reduces $\alpha$ KGDH activity in HepG2 cells	67
4.1.4	Knockdown $\alpha$ KGDH blocks HIF-1 $\alpha$ expression in HepG2 cells	68
4.1.5	Reduction of EPO-HRE Luc gene expression by $\alpha$ KGDH shRNA	69
4.1.6	Inhibition of HepG2 cells proliferation by $\alpha$ KGDH shRNA	70
4.2	Alpha-ketoglutarate ( $\alpha$ KGA) increases $\alpha$ KGDH activity and decreases HIF-1 $\alpha$ protein levels	71
4.2.1	Alpha-ketoglutarate inhibits proliferation of HepG2 cells	73
4.3	Regulation of HIF-1 $\alpha$ protein levels by malic enzyme, isocitrate dehydrogenase and glucose 6-phosphate dehydrogenase in HepG2 cells	74
4.3.1	Modulation of HIF-1 $\alpha$ protein levels after knockdown of cytosolic malic enzyme (ME1)	74
4.3.2	Modulation of HIF-1 $\alpha$ protein levels after knockdown of mitochondrial isocitrate dehydrogenase (IDH2)	77
4.3.3	Modulation of HIF-1 $\alpha$ protein levels after knockdown of glucose 6-phosphate dehydrogenase (G6PDH)	77
4.3.4	Effect of overexpression and inhibition of ME1, IDH2 and G6PDH on ROS production and cellular GSH in HepG2 cells	79
4.4	Modulation of HIF-1 $\alpha$ by arsenite As(III)	84
4.4.1	As(III) induces HIF-1 $\alpha$ protein levels in HepG2 cells	84
4.4.2	Time-dependent effect of As(III) on HIF-1 $\alpha$ in HepG2 cells	84
4.4.3	Studying the mechanism of HIF-1 $\alpha$ induction by As(III)	87
4.4.3.1	As(III) induces HIF-1 $\alpha$ at the transcriptional level	87
4.4.3.2	Effect of As(III) on HIF-1 $\alpha$ stabilization and HIF-1 $\alpha$ half-life	89
4.4.3.3	The As(III)-dependent stabilization of the HIF-1 $\alpha$ protein is not mediated via a transactivation domain	91
4.4.3.4	Induction of PAI-1 and HO-1 protein levels by As(III)	93
4.4.3.5	As(III) modulates the activity of HIF-1 $\alpha$ target genes	94
4.4.3.6	Involvement of ERK1/2, PI3K and AMPK in the induction of HIF-1 $\alpha$ by As(III)	95
4.4.3.7	Role of ROS in As(III)-induced HIF-1 $\alpha$ levels	99
4.4.3.8	Induction of GSH levels by As(III) in HepG2 cells	107

4.4.3.9	NADPH oxidases and NOS are involved in As(III)-induced ERK1/2, p38 and Akt activation	108
4.4.3.10	As(III) induces HepG2 cells proliferation	108
<b>5</b>	<b>DISCUSSION</b>	<b>110</b>
5.1	Inhibition of alpha-ketoglutarate dehydrogenase blocks HIF-1 $\alpha$	110
5.1.1	Inhibition $\alpha$ KGDH by arsenite (AsIII)	110
5.1.2	Knockdown of $\alpha$ KGDH by shRNA reduced HIF-1 $\alpha$ mRNA and protein levels	111
5.2	Regulation of HIF-1 $\alpha$ protein levels by enzymes involved in production of NADPH	112
5.2.1	Modulation of HIF-1 $\alpha$ protein levels by cytosolic malic enzyme (ME1)	112
5.2.2	Modulation of HIF-1 $\alpha$ protein levels by isocitrate dehydrogenases (IDHs)	113
5.2.3	Modulation of HIF-1 $\alpha$ protein levels by glucose 6-phosphate dehydrogenase (G6PDH)	113
5.3	Modulation of HIF-1 $\alpha$ by arsenite	114
5.3.1	As(III) induces HIF-1 $\alpha$ protein levels under normoxia and reduces the effect of hypoxia in HepG2 cells	114
5.3.2	As(III) reduces HIF-1 $\alpha$ activity and modulates HIF-1 $\alpha$ target gene expression	115
5.3.3	Involvement of ERK1/2, PI3K and AMPK in the induction of HIF-1 $\alpha$ by As(III)	116
5.3.4	Role of ROS in As(III) induced HIF-1 $\alpha$	117
5.3.5	As(III) induces cell proliferation	118
<b>6</b>	<b>CONCLUSION</b>	<b>119</b>
