<b>1 Basic Principles of Chemical Kinetics</b>	<b>1</b>
1.1 Symbols, terminology and abbreviations	1
1.2 Order of a reaction	3
1.2.1 Order and molecularity	3
1.2.2 First-order kinetics	4
1.2.3 Second-order kinetics	5
1.2.4 Third-order kinetics	7
1.2.5 Zero-order kinetics	8
1.2.6 Determination of the order of a reaction	8
1.3 Dimensions of rate constants	9
1.4 Reversible reactions	10
1.5 Determination of first-order rate constants	11
1.6 The steady state	13
1.7 Catalysis	14
1.8 The influence of temperature and pressure on rate constants	15
1.8.1 The Arrhenius equation	15
1.8.2 Elementary collision theory	17
1.8.3 Transition-state theory	18
1.8.4 Effects of hydrostatic pressure	21
<i>Chapter summary</i>	22
Problems	23
<b>2 Introduction to Enzyme Kinetics</b>	<b>25</b>
2.1 The idea of an enzyme–substrate complex	25
2.2 The Michaelis–Menten equation	28
2.3 The steady state of an enzyme-catalyzed reaction	32
2.3.1 The Briggs–Haldane treatment	32
2.3.2 Parameters of the Michaelis–Menten equation	33
2.3.3 Units of enzyme activity	34
2.3.4 The curve defined by the Michaelis–Menten equation	35

2.3.5	Mutual depletion kinetics	37
2.3.6	Ways of writing the Michaelis–Menten equation	37
2.4	Specificity	38
2.4.1	The fundamental property of enzymes	38
2.4.2	Discrimination between mixed substrates	39
2.4.3	Comparing different catalysts	42
2.5	Validity of the steady-state assumption	43
2.6	Graphs of the Michaelis–Menten equation	45
2.6.1	Plotting $v$ against $a$	45
2.6.2	The double-reciprocal plot	47
2.6.3	The plot of $a/v$ against $a$	48
2.6.4	The plot of $v$ against $v/a$	49
2.6.5	Origins of the plots	51
2.6.6	The direct linear plot	51
2.7	The reversible Michaelis–Menten mechanism	54
2.7.1	The reversible rate equation	54
2.7.2	The Haldane relationship	58
2.7.3	“One-way enzymes”	59
2.8	Product inhibition	61
2.9	Integration of enzyme rate equations	63
2.9.1	Michaelis–Menten equation without product inhibition	63
2.9.2	Effect of product inhibition on progress curves	65
2.9.3	Other problems with time courses	66
2.9.4	Characterizing mutant enzymes	67
2.9.5	Accurate estimation of initial rates	67
2.9.6	Time courses for other mechanisms	71
	<i>Chapter summary</i>	72
	Problems	73
<b>3</b>	<b>“Alternative” enzymes</b>	<b>77</b>
3.1	Introduction	77
3.2	Artificial enzymes	78
3.3	Site-directed mutagenesis	80
3.4	Chemical mimics of enzyme catalysis	81
3.5	Catalytic RNA	81
3.6	Catalytic antibodies	83
	<i>Chapter summary</i>	84
	Problems	84
<b>4</b>	<b>Practical Aspects of Kinetics</b>	<b>85</b>
4.1	Enzyme assays	85
4.1.1	Discontinuous and continuous assays	85
4.1.2	Estimating the initial rate	86
4.1.3	Increasing the straightness of the progress curve	88
4.1.4	Coupled assays	89

4.2	Detecting enzyme inactivation	93
4.3	Experimental design	95
4.3.1	Choice of substrate concentrations	95
4.3.2	Choice of pH, temperature and other conditions	98
4.3.3	Use of replicate observations	99
4.4	Treatment of ionic equilibria	102
	<i>Chapter summary</i>	105
	Problems	106
<b>5</b>	<b>Deriving Steady-state Rate Equations</b>	<b>107</b>
5.1	Introduction	107
5.2	The principle of the King–Altman method	108
5.3	The method of King and Altman	113
5.4	The method of Wong and Hanes	116
5.5	Modifications to the King–Altman method	117
5.6	Reactions containing steps at equilibrium	119
5.7	Analyzing mechanisms by inspection	122
5.7.1	Topological reasoning	122
5.7.2	Mechanisms with alternative routes	123
5.7.3	Dead-end steps	124
5.7.4	Undetectability of some isomerization steps	125
5.8	A simpler method for irreversible reactions	126
5.9	Derivation of rate equations by computer	128
	<i>Chapter summary</i>	131
	Problems	132
<b>6</b>	<b>Reversible Inhibition and Activation</b>	<b>133</b>
6.1	Introduction	133
6.2	Linear inhibition	134
6.2.1	Competitive inhibition	134
6.2.2	Mixed inhibition	136
6.2.3	Uncompetitive inhibition	139
6.2.4	Summary of linear inhibition types	140
6.3	Plotting inhibition results	140
6.3.1	Simple plots	140
6.3.2	Combination plots	144
6.4	Multiple inhibitors	145
6.5	Relationship between inhibition constants and the concentration for 50% inhibition	147
6.6	Inhibition by a competing substrate	149
6.6.1	Competition between substrates	149
6.6.2	Testing if two reactions occur at the same site	150
6.7	Enzyme activation	152
6.7.1	Miscellaneous uses of the term <i>activation</i>	152
6.7.2	Essential activation	153

6.7.3	Mixed activation	155
6.7.4	Hyperbolic activation and inhibition	155
6.8	Design of inhibition experiments	157
6.9	Inhibitory effects of substrates	159
6.9.1	Nonproductive binding	159
6.9.2	Substrate inhibition	162
	<i>Chapter summary</i>	164
	Problems	165
<b>7</b>	<b>Tight-binding and Irreversible Inhibitors</b>	<b>169</b>
7.1	Tight-binding inhibitors	169
7.2	Irreversible inhibitors	172
7.2.1	Nonspecific irreversible inhibition	172
7.2.2	Specific irreversible inhibition	173
7.3	Substrate protection experiments	174
7.4	Mechanism-based inactivation	175
7.5	Chemical modification as a means of identifying essential groups	179
7.5.1	Kinetic analysis of chemical modification	180
7.5.2	Remaining activity as a function of degree of modification	181
7.6	Inhibition as the basis of drug design	183
7.7	Delivering a drug to its target	186
	<i>Chapter summary</i>	187
	Problems	188
<b>8</b>	<b>Reactions of More than One Substrate</b>	<b>189</b>
8.1	Introduction	189
8.2	Classification of mechanisms	190
8.2.1	Ternary-complex mechanisms	190
8.2.2	Substituted-enzyme mechanisms	193
8.2.3	Comparison between chemical and kinetic classifications	195
8.2.4	Schematic representation of mechanisms	197
8.3	Rate equations	198
8.3.1	Compulsory-order ternary-complex mechanism	198
8.3.2	Random-order ternary-complex mechanism	200
8.3.3	Substituted-enzyme mechanism	202
8.3.4	Haldane relationships	202
8.3.5	Calculation of rate constants from kinetic parameters	203
8.4	Initial-rate measurements in the absence of products	204
8.4.1	Meanings of the parameters	204
8.4.2	Apparent Michaelis–Menten parameters	207
8.4.3	Primary plots for ternary-complex mechanisms	208
8.4.4	Secondary plots	209
8.4.5	Plots for the substituted-enzyme mechanism	210
8.5	Substrate inhibition	211
8.5.1	Why substrate inhibition occurs	211

8.5.2	Compulsory-order ternary-complex mechanism	211
8.5.3	Random-order ternary-complex mechanism	212
8.5.4	Substituted-enzyme mechanism	212
8.5.5	Diagnostic value of substrate inhibition	213
8.6	Product inhibition	213
8.7	Design of experiments	217
8.8	Reactions with three or more substrates	218
8.8.1	Quaternary-complex mechanisms	219
8.8.2	Substituted-enzyme mechanisms	219
8.8.3	Hybrid mechanisms	220
8.8.4	Classification of three-substrate mechanisms	221
	<i>Chapter summary</i>	223
	Problems	224
<b>9</b>	<b>Use of Isotopes for Studying Enzyme Mechanisms</b>	<b>227</b>
9.1	Isotope exchange and isotope effects	227
9.2	Principles of isotope exchange	228
9.3	Isotope exchange at equilibrium	231
9.4	Isotope exchange in substituted-enzyme mechanisms	233
9.5	Nonequilibrium isotope exchange	234
9.5.1	Chemiflux ratios	234
9.5.2	Isomerase kinetics	238
9.5.3	Tracer perturbation	240
9.6	Theory of kinetic isotope effects	242
9.6.1	Primary isotope effects	242
9.6.2	Secondary isotope effects	245
9.6.3	Equilibrium isotope effects	246
9.7	Primary isotope effects in enzyme kinetics	246
9.8	Solvent isotope effects	248
	<i>Chapter summary</i>	251
	Problems	252
<b>10</b>	<b>Effect of pH on Enzyme Activity</b>	<b>253</b>
10.1	Enzymes and pH	253
10.2	Acid-base properties of proteins	255
10.3	Ionization of a dibasic acid	257
10.3.1	Expression in terms of group dissociation constants	257
10.3.2	Molecular dissociation constants	259
10.3.3	Bell-shaped curves	260
10.4	Effect of pH on enzyme kinetic constants	261
10.4.1	Underlying assumptions	261
10.4.2	pH dependence of $V$ and $V/K_m$	262
10.4.3	pH-independent parameters and their relationship to "apparent" parameters	264
10.4.4	pH dependence of $K_m$	265

10.4.5	Experimental design	266
10.5	Ionization of the substrate	268
10.6	“Crossed-over” ionization	268
10.7	More complicated pH effects	269
	<i>Chapter summary</i>	269
	Problems	270
<b>11</b>	<b>Temperature Effects on Enzyme Activity</b>	<b>273</b>
11.1	Temperature denaturation	273
11.2	Irreversible denaturation	275
11.3	Temperature optimum	275
11.4	Application of the Arrhenius equation to enzymes	276
11.5	Entropy–enthalpy compensation	278
	<i>Chapter summary</i>	279
	Problems	280
<b>12</b>	<b>Regulation of Enzyme Activity</b>	<b>281</b>
12.1	Function of cooperative and allosteric interactions	281
12.1.1	Futile cycles	281
12.1.2	Inadequacy of Michaelis–Menten kinetics for regulation	283
12.1.3	Cooperativity	284
12.1.4	Allosteric interactions	285
12.2	The development of models for cooperativity	286
12.2.1	The Hill equation	286
12.2.2	Specificity of non-Michaelis–Menten enzymes	288
12.2.3	An alternative index of cooperativity	289
12.2.4	Assumption of equilibrium binding in cooperative kinetics	290
12.2.5	The Adair equation	291
12.2.6	Mechanistic and operational definitions of cooperativity	295
12.3	Analysis of binding experiments	297
12.3.1	Equilibrium dialysis	297
12.3.2	The Scatchard plot	298
12.4	Induced fit	302
12.4.1	Enzyme specificity	302
12.4.2	Induced fit today	304
12.5	The symmetry model of Monod, Wyman and Changeux	304
12.5.1	Basic postulates of the symmetry model	304
12.5.2	Algebraic analysis	306
12.5.3	Properties implied by the binding equation	307
12.5.4	Heterotropic effects	310
12.6	Comparison between the principal models of cooperativity	312
12.7	The sequential model of Koshland, Némethy and Filmer	313
12.7.1	Postulates	313
12.7.2	Algebraic analysis	315
12.7.3	Properties implied by the binding equation	318

12.8	Association-dissociation models of cooperativity	319
12.9	Kinetic cooperativity	320
	<i>Chapter summary</i>	323
	Problems	324
<b>13</b>	<b>Multienzyme Systems</b>	<b>327</b>
13.1	Enzymes in their physiological context	327
13.1.1	Enzymes as components of systems	327
13.1.2	Moiety conservation	328
13.1.3	Enzymes in permeabilized cells	329
13.2	Metabolic control analysis	330
13.3	Elasticities	332
13.3.1	Definition of elasticity	332
13.3.2	Common properties of elasticities	336
13.3.3	Enzyme kinetics viewed from control analysis	337
13.3.4	Rates and concentrations as effects, not causes	338
13.4	Control coefficients	341
13.4.1	Definitions	341
13.4.2	The perturbing parameter	344
13.5	Properties of control coefficients	344
13.5.1	Summation relationships	344
13.5.2	Implications for large perturbations	347
13.5.3	Constrained enzyme concentrations	349
13.6	Relationships between elasticities and control coefficients	350
13.6.1	Connectivity properties	350
13.6.2	Control coefficients in a three-step pathway	352
13.6.3	Expression of summation and connectivity relationships in matrix form	354
13.6.4	Connectivity relationship for a metabolite not involved in feedback	355

	Problems	379

<b>14 Fast Reactions</b>	<b>381</b>
14.1 Limitations of steady-state measurements	381
14.1.1 The transient state	381
14.1.2 The relaxation time	382
14.1.3 "Slow" and "fast" steps in mechanisms	383
14.1.4 Ambiguities in the steady-state analysis of systems with intermediate isomerization	385
14.1.5 Ill-conditioning	386
14.2 Product release before completion of the catalytic cycle	388
14.2.1 "Burst" kinetics	388
14.2.2 Active site titration	390
14.3 Experimental techniques	391
14.3.1 Classes of method	391
14.3.2 Continuous flow	392
14.3.3 Stopped flow	393
14.3.4 Quenched flow	394
14.3.5 Flash photolysis	396
14.3.6 Magnetic resonance methods	398
14.3.7 Relaxation methods	399
14.4 Transient-state kinetics	400
14.4.1 Systems far from equilibrium	400
14.4.2 Simplification of complicated mechanisms	405
14.4.3 Systems close to equilibrium	408
<i>Chapter summary</i>	410
Problems	411
<b>15 Estimation of Kinetic Constants</b>	<b>413</b>
15.1 Data analysis in an age of kits	413
15.2 The effect of experimental error on kinetic analysis	414
15.3 Least-squares fit to the Michaelis–Menten equation	418
15.3.1 Including error in the equation	418
15.3.2 Estimation of the Michaelis–Menten parameters	420
15.3.3 Corresponding results for a uniform standard deviation in the rates	422
15.3.4 Estimating weights from replicate observations	424
15.4 Statistical aspects of the direct linear plot	425
15.4.1 Comparison between classical and distribution-free statistics	425
15.4.2 Application to the direct linear plot	427
15.4.3 Lack of need for weighting	429
15.4.4 Insensitivity to outliers	429
15.4.5 Handling of negative parameter estimates	430
15.5 Precision of estimated kinetic parameters	432
15.5.1 Experimental variance	432
15.5.2 Variances of the Michaelis–Menten parameters	433

<i>Contents</i>	xiii
15.5.3 Standard errors	434
15.5.4 $K_m$ as the least precise Michaelis–Menten parameter	436
15.6 Generalizing the results to more than two parameters	438
15.6.1 The general linear model	438
15.6.2 Comparing models	439
15.7 Using existing programs for analyzing kinetic data	440
15.8 Residual plots and their uses	443
