1	Introduction	1
1.1	Motivation	1
1.2	Placement	3
1.3	Structure of the Thesis	5
2	Continuum Mechanics	7
2.1	Kinematics	7
2.1.1	Deformation	8
2.1.2	Strains	11
2.2	Balance Laws	13
2.2.1	Conservation of Mass	13
2.2.2	Balance of Linear Momentum	14
2.2.3	Balance of Angular Momentum	15
2.2.4	1st Law of Thermodynamics - Conservation of Energy	16
2.2.5	2nd Law of Thermodynamics - Entropy Inequality	18
2.2.6	Transformation of Stresses	20
2.3	Constitutive Laws	21
2.3.1	Material Characteristics of Elastomers	22
2.3.1.1	Chemical Properties of Elastomers	23
2.3.1.2	Large Strains	23
2.3.1.3	Material Hysteresis - MULLINS Effect	24
2.3.1.4	Incompressibility	24
2.3.1.5	Viscoelasticity - PAYNE Effect	25
2.3.1.6	Thermomechanical Properties	26
2.3.1.7	Motivation for the Choice of Constitutive Law	26
2.3.2	Isotropic Hyperelasticity	27
2.3.2.1	NEO - HOOKE Material	28
2.3.2.2	OGDEN Material	29
2.4	Variational Forms	30
2.4.1	Weak Form of Equilibrium	30
2.4.2	Principle of Minimizing the Potential Energy	32
3	Contact Mechanics	33
3.1	Contact Kinematics	33
3.1.1	Normal Contact	34

3.1.2	Tangential Contact	35
3.2	Contact Interface Constraints	36
3.2.1	Normal Contact	36
3.2.2	Tangential Contact	37
3.3	Numerical Solution Strategies	39
3.3.1	Lagrange Multiplier Method	39
3.3.2	Penalty Method	39
3.3.2.1	Normal Contact	41
3.3.2.2	Tangential Contact	41
4	Finite Element Method	43
4.1	Linearizations	44
4.1.1	Linearization of the Weak Form of Equilibrium	45
4.1.2	Linearization of Contact Terms	46
4.1.2.1	Normal Contact Contribution	46
4.1.2.2	Tangential Contact Contribution	48
4.2	Discretization	50
4.2.1	Discretization of the Continuum	50
4.2.1.1	Isoparametric Concept	51
4.2.1.2	Isoparametric Shape Functions	53
4.2.1.3	Discretization of the Weak Form	54
4.2.2	Discretization of the Contact	56
5	Multiscale Analysis	61
5.1	Existing Multiscale Methods	62
5.1.1	Information-passing Multiscale Algorithms	62
5.1.2	Coupled Multiscale Algorithms / FE^2	63
5.1.2.1	Representative Volume Element (RVE)	64
5.2	Rubber-Asphalt Interface Friction	66
5.2.1	Indentation	67
5.2.2	Snailing Effects	68
5.2.3	Roughness	70
5.2.3.1	Real Contact Area	70
5.2.3.2	Influence of roughness on the friction coefficient	71
5.2.4	Surface Description	73
5.2.4.1	Sinusoidal Curve	76
5.3	Need for a computation on multiple scales	77
5.4	Multiscale Projection Algorithm	79
5.4.1	Theoretical Background	80
5.4.2	Solution procedure	81
5.4.2.1	Domain-Search & Generation of Microscale Model	83
5.4.2.2	Management of History Variables	85
5.4.2.3	Model Management	86
5.4.2.4	Interpolation of Displacements	87
5.4.2.5	Microscale Computation	88

5.4.2.6	Projection	90
6	Numerical Results	99
6.1	Basic examples	101
6.1.1	Example 1: Two flat blocks in contact	101
6.1.2	Example 2: Flat block in contact with a convex surface	105
6.1.3	Example 3: Flat block in contact with a concave surface	108
6.2	Tire-Road Problem	110
6.3	Convergence Behavior	116
7	Summary, Conclusions and Outlook	121
	List of Figures	124
	Nomenclature	129
	Bibliography	132
	Curriculum vitae	143
