

Table of contents

1 Summary	1
2 Introduction	2
2.1 Mitochondria	2
2.2 Protein transport in mitochondria	3
2.2.1 Principles of mitochondrial protein import	3
2.2.2 The TIM23 complex	7
2.2.3 The mitochondrial protein export machinery OXA	11
2.3 Mitochondrial morphology	13
2.3.1 Mitochondrial dynamics and communication with the endoplasmic reticulum	14
2.3.2 Mitochondrial ultrastructure	17
2.3.3 Proteins involved in mitochondrial inner membrane morphology	20
3 Aims of this study	23
4 Results and Discussion	24
4.1 Topogenesis of the polytopic inner membrane protein Mdl1	24
4.2 Identification of novel subunits of mitochondrial membrane protein complexes	34
4.3 MINOS, the <u>m</u> itochondrial <u>i</u> nner membrane <u>o</u> rganizing <u>s</u> ystem	36
5 Experimental procedures	46
5.1 Yeast strains	46
5.2 Yeast growth and isolation of mitochondria	47
5.3 Generation of plasmids for synthesis of Mdl1-derived precursor proteins	48
5.4 Synthesis of radiolabeled precursor proteins and import into isolated mitochondria	49
5.5 Analysis of protein samples by gel electrophoresis	50
5.6 Hypoosmotic swelling of mitochondria	51
5.7 Outer membrane permeabilization assay	51
5.8 Carbonate extraction	52
5.9 Fluorescence microscopy	52
5.10 SILAC	52
5.11 IgG affinity purification	53
6 References	54
7 Publications	72
