Table of Contents

Application Frameworks

Ada Ravenscar Code Archetypes for Component-Based Development ... 1  
Marco Panunzio and Tullio Vardanega

An Integrated Framework for Multiprocessor, Multimoded Real-Time Applications ........................................... 18  
Sergio Sáez, Jorge Real, and Alfons Crespo

Integrating Middleware for Timely Reconfiguration of Distributed Soft Real-Time Systems with Ada DSA ......................... 35  
Marisol García-Valls and Felipe Ibáñez-Vázquez

Use of Ada

Source Code as the Key Artifact in Requirement-Based Development: The Case of Ada 2012 .................................................. 49  
José F. Ruiz, Cyrille Comar, and Yannick Moy

Teaching ‘Concepts of Programming Languages’ with Ada .............. 60  
Theodor Tempelmeier

Designing the API for a Cryptographic Library: A Misuse-Resistant Application Programming Interface ............................. 75  
Christian Forler, Stefan Lucks, and Jakob Wenzel

Modeling

Handling Synchronization Requirements under Separation of Concerns in Model-Driven Component-Based Development ............ 89  
Patricia López Martínez and Tullio Vardanega

An Approach to Model Checking Ada Programs .......................... 105  
José Miguel Faria, João Martins, and Jorge Sousa Pinto

Formal Modelling for Ada Implementations: Tasking Event-B .......... 119  
Andrew Edmunds, Abdolbaghi Rezazadeh, and Michael Butler

Testing and Validation

Augmenting Formal Development with Use Case Reasoning ............ 133  
Alexei Iliasov
Formal Goal-Oriented Development of Resilient MAS in Event-B ...... 147
Inna Pereverzeva, Elena Troubitsyna, and Linas Laibinis

Choices, Choices: Comparing between CHOC'LABE and the
Classification-Tree Methodology ........................................ 162
Pak-Lok Poon, Tsong Yueh Chen, and T.H. Tse

Real-Time Systems

Improving the Performance of Execution Time Control by Using a
Hardware Time Management Unit ........................................ 177
Kristoffer Nyborg Gregersen and Amund Skavhaug

Implementing and Verifying EDF Preemption-Level Resource
Control ................................................................. 193
Mark Louis Fairbairn and Alan Burns

Efficient Constraint Handling during Designing Reliable Automotive
Real-Time Systems ......................................................... 207
Florian Pölzlauer, Iain Bate, and Eugen Brenner

Author Index ............................................................. 221
