Preface	v
I Plane Power Geometry	
1 Alexander D. Bruno	
Plane Power Geometry for One ODE and P_1–P_6	3
1.1 Statement of the Problem	3
1.2 Computation of Truncated Equations	4
1.3 Computation of Expansions of Solutions to the Initial Equation (1.1)	6
1.4 Extension of the Class of Solutions	7
1.5 Solution of Truncated Equations	7
1.6 Types of Expansions	10
1.7 Painlevé Equations P_I	11
2 Alexander B. Batkhin and Natalia V. Batkhina	
New Simple Exact Solutions to Equation P_6	13
2.1 Introduction	13
2.1.1 Power Geometry Essentials	13
2.1.2 Matching “Heads” and “Tails” of Expansions	14
2.2 Constructing the Template of an Exact Solution	15
2.3 Results	17
2.3.1 Known Exact Solutions to P_6	17
2.3.2 Computed Solutions	17
2.3.3 Generalization of Computed Solutions	20
3 Irina V. Goryuchkina	
Convergence of a Formal Solution to an ODE	23
3.1 The General Case	23
3.2 The Case of Rational Power Exponents	24

3.3	The Case of Complex Power Exponents	25
3.4	On Solutions of the Sixth Painlevé Equation	25
4	<i>Irina V. Goryuchkina</i> Asymptotic Expansions and Forms of Solutions to P_6	27
4.1	Asymptotic Expansions near Singular Points of the Equation	27
4.2	Asymptotic Expansions near a Regular Point of the Equation	30
4.3	Boutroux-Type Elliptic Asymptotic Forms	30
5	<i>Anastasia V. Parusnikova</i> Asymptotic Expansions of Solutions to P_5	33
5.1	Introduction	33
5.2	Asymptotic Expansions of Solutions near Infinity	35
5.3	Asymptotic Expansions of Solutions near Zero	35
5.4	Asymptotic Expansions of Solutions in the Neighborhood of the Nonsingular Point of an Equation	37
 II Space Power Geometry		
6	<i>Alexander D. Bruno</i> Space Power Geometry for one ODE and P_1–P_4, P_6	41
6.1	Space Power Geometry	41
6.2	Asymptotic Forms of Solutions to Painlevé Equations P_1 – P_4 , P_6	44
6.2.1	Equation P_1	44
6.2.2	Equation P_2	45
6.2.3	Equation P_3 for $cd \neq 0$	46
6.2.4	Equation P_3 for $c = 0$ and $ad \neq 0$	47
6.2.5	Equation P_3 for $c = d = 0$ and $ab \neq 0$	48
6.2.6	Equation P_4	49
6.2.7	Equation P_6	50
7	<i>Alexander D. Bruno and Anastasia V. Parusnikova</i> Elliptic and Periodic Asymptotic Forms of Solutions to P_5	53
7.1	The Fifth Painlevé Equation	53
7.2	The case $\delta \neq 0$	54
7.2.1	General Properties of the P_5 Equation	54
7.2.2	The First Family of Elliptic Asymptotic Forms	55

7.2.3	The First Family of Periodic Asymptotic Forms	57
7.2.4	The Second Family of Periodic Asymptotic Forms	58
7.3	The Case $\delta = 0, \gamma \neq 0$	59
7.3.1	General Properties	59
7.3.2	The Second Family of Elliptic Asymptotic Forms	60
7.3.3	The Third Family of Periodic Asymptotic Forms	62
7.3.4	The Fourth Family of Periodic Asymptotic Forms	63
7.4	The Results Obtained	64
8	<i>Alexander D. Bruno</i>	
	Regular Asymptotic Expansions of Solutions to One ODE and P_1-P_5	67
8.1	Introduction	67
8.2	Finding Asymptotic Forms	68
8.3	Computation of Expansions (8.2)	69
8.4	Equation P_1	71
8.5	Equation P_2	73
8.5.1	Elliptic Asymptotic Forms, Face $\Gamma_3^{(2)}$	73
8.5.2	Periodic Asymptotic Forms, Face $\Gamma_4^{(2)}$	74
8.6	Equation P_3	75
8.6.1	Case $cd \neq 0$	75
8.6.2	Case $c = 0, ad \neq 0$	76
8.6.3	Case $c = d = 0, ab \neq 0$	77
8.7	Equation P_4	77
8.7.1	Elliptic Asymptotic Forms, Face $\Gamma_3^{(2)}$	78
8.7.2	Periodic Asymptotic Forms, Face $\Gamma_4^{(2)}$	78
8.8	Equation P_5	79
8.8.1	Case $d \neq 0$, Elliptic Asymptotic Forms, Face $\Gamma_1^{(2)}$	79
8.8.2	Case $d \neq 0$, Periodic Asymptotic Forms, Face $\Gamma_2^{(2)}$	81
8.8.3	Case $d = 0, c \neq 0$, Elliptic Asymptotic Forms, Face $\tilde{\Gamma}_1^{(2)}$	81
8.8.4	Case $d = 0, c \neq 0$, Periodic Asymptotic Forms, Face $\tilde{\Gamma}_2^{(2)}$	81

III Isomonodromy Deformations

9	<i>Dmitry V. Artamonov</i>	
	Isomonodromic Deformations on Riemann Surfaces	85
9.1	Introduction	85

9.2	The Space of Parameters \tilde{T}	86
9.3	The Description of Bundles with Connections on a Riemann Surface .	86
9.4	Isomonodromic Deformations	87
10	<i>Mikhail V. Babich</i> On Birational Darboux Coordinates of Isomonodromic Deformation Equations Phase Space	91
11	<i>Yuliya P. Bibilo and Renat R. Gontsov</i> On the Malgrange Isomonodromic Deformations of Nonresonant Irregular Systems	95
11.1	Introduction	95
11.2	The Malgrange Isomonodromic Deformation of the Pair (E^0, ∇^0) ...	96
11.3	Specificity of Meromorphic 2×2 -Connections	98
12	<i>Davide Guzzetti</i> Critical behavior of P_6 Functions from the Isomonodromy Deformations Approach	101
12.1	Introduction	101
12.2	Behavior of $y(x)$	102
12.3	Parameterization in Terms of Monodromy Data	104
13	<i>Alexander Ya. Kazakov</i> Isomonodromy Deformation of the Heun Class Equation	107
13.1	Introduction	107
13.2	Gauge Transforms of Linear Differential Equations	108
13.3	Gauge Transforms of the Hypergeometric Class Equations	111
13.4	Gauge Transform of Heun Class Equations	112
13.4.1	Formulation of the Problem	112
13.4.2	Initial System of Equations and Equation <i>Heunc2</i>	113
13.4.3	Parameters of the Transformed Equation	114
13.5	Conclusion	116
14	<i>Vladimir P. Leksin</i> Isomonodromy Deformations and Hypergeometric-Type Systems	117
14.1	Schlesinger Families of Fuchsian Systems	117
14.2	Schlesinger Systems	118

14.3	Upper-Triangular Schlesinger Systems	118
14.4	Jordan–Pochhammer Systems	120
14.5	The Basic Result	121
15	<i>Dmitrii P. Novikov</i>	
	A Monodromy Problem Connected with P_6	123
15.1	Preliminaries I	123
15.2	Preliminaries II	124
15.3	Main Result	125
15.4	Example	126
16	<i>Yousuke Ohyama</i>	
	Monodromy Evolving Deformations and Confluent Halphen’s Systems	129
16.1	Introduction	129
16.2	Quadratic Systems and Nonassociative Algebras	131
16.3	Monodromy Evolving Deformations	133
16.4	Halphen’s Confluent Systems and Monodromy Evolving Deformations	135
17	<i>Yoshikatsu Sasaki</i>	
	On the Gauge Transformation of the Sixth Painlevé Equation	137
17.1	Linearizations of the Sixth Painlevé Equation	137
17.1.1	LODE L_{VI}	138
17.1.2	LODE \tilde{L}_{VI}	139
17.1.3	LODE $\tilde{\tilde{L}}_{VI}$	140
17.1.4	Schlesinger System with Symmetric Gauge	142
17.1.5	Schlesinger System with Asymmetric Gauge	143
17.2	Schlesinger Transformation $\tilde{\tilde{L}}_{VI} \rightarrow L_{VI}$	143
18	<i>Ilya V. Vyugin</i>	
	Expansions for Solutions of the Schlesinger Equation at a Singular Point	151
18.1	Introduction	151
18.2	Schlesinger Equation and Isomonodromic Deformations	154
18.3	Sketch of the Proof	155

IV Painlevé Property

- 19 *Pantelis A. Damianou*
Painleve Analysis of Lotka–Volterra Equations 161
- 20 *Evgenii Gricuk and Valerii Gromak*
Painlevé Test and Briot–Bouquet Systems 165
- 21 *Valerii Gromak*
Solutions of the Chazy System 167
- 22 *Yasin Adjabi and Arezki Kessi*
Third-Order Ordinary Differential Equations with the Painlevé Test 171
- 22.1 Introduction 171
- 22.2 Simplified Equation 172
- 22.3 Reduced Equations 174
- 22.3.1 Leading Order $k = -1$ 174
- 22.3.2 Leading Order $k = -2$ 181
- 22.3.3 Leading Order $k = -3$ 182
- 22.3.4 Leading Order $k = -4$ 183
- 23 *Ivan P. Martynov, Vyacheslav A. Pronko and Tatsyana K. Andreeva*
Analytic Properties of Solutions of a Class of Third-Order Equations with an Irrational Right-Hand Side 185

V Other Aspects

- 24 *Yurii V. Brezhnev*
The Sixth Painlevé Transcendent and Uniformizable Orbifolds 193
- 24.1 Algebraic Solutions of \mathcal{P}_6 and Uniformization Theory 193
- 24.2 On the General Solution to Equation (24.1) 194
- 24.3 Calculus: Abelian Integrals and Affine (Analytic) Connections 195
- 25 *Yurii V. Brezhnev*
On Uniformizable Representation for Abelian Integrals 199
- 25.1 Introduction 199
- 25.2 Schwarz Equation and Equations on Tori 200

25.3	Holomorphic Elliptic Integrals and Hypergeometric Functions	201
25.3.1	Lemniscate	201
25.3.2	Equi-Anharmonic Curve	203
25.4	Abelian Integrals for Genus $g > 1$	204
25.4.1	Higher Genera. Examples	205
26	<i>Rustem N. Garifullin</i> Phase Shift for a Special Solution to the Korteweg–de Vries Equation in the Whitham Zone	209
26.1	Introduction	209
26.2	Evaluation of the Phase Shift	210
27	<i>Valentina A. Golubeva</i> Fuchsian Reduction of Differential Equations	213
27.1	Fuchsian Reduction	215
27.1.1	Two Simple Examples	215
27.1.2	A More Complex Example	216
27.2	Two Applications: Astronomy and Relativity Theory	217
27.2.1	Astronomy. A Model of Gaseous Stars	217
27.2.2	Relativity. Gowdy Space-Time	218
27.3	Fuchsian Systems for Feynman Integrals	220
28	<i>Kohei Iwaki</i> The Voros Coefficient and the Parametric Stokes Phenomenon for the Second Painlevé Equation	225
28.1	Introduction	225
28.2	Connection Formula for the Parametric Stokes Phenomenon	226
28.3	Derivation of the Connection Formulas Through the Analysis of the Voros Coefficient of (P_2)	228
29	<i>Alexander Ya. Kazakov</i> Integral Symmetry and the Deformed Hypergeometric Equation	231
30	<i>Alexander Ya. Kazakov and Sergey Yu. Slavyanov</i> Integral Symmetries for Confluent Heun Equations and Symmetries of Painlevé Equation P_5	237
31	<i>Dmitry Korotkin and Peter Zograf</i> From the Tau Function of Painlevé P_6 Equation to Moduli Spaces	241

32	<i>Yousuke Ohyama</i>	
	On particular Solutions of q-Painlevé Equations and q-Hypergeometric Equations	247
	32.1 Introduction	247
	32.2 q -Difference Equation of the Hypergeometric Type	247
	32.3 Hypergeometric Solutions of the q -Painlevé Equations	250
33	<i>Sergey Yu. Slavyanov</i>	
	Derivation of Painlevé Equations by Antiquantization	253
34	<i>Kouichi Takemura</i>	
	Integral Transformation of Heun's Equation and Apparent Singularity	257
	34.1 Heun's Equation and Integral Transformation	257
	34.2 Apparent Singularity and Integral Representation of Solutions	258
	34.3 Elliptical Representation of Heun's Equation and Integral Transformation	259
35	<i>Vladimir Tsegel'nik</i>	
	Painlevé Analysis of Solutions to Some Nonlinear Differential Equations and their Systems Associated with Models of the Random-Matrix Type	263
	35.1 Introduction	263
	35.2 Model of the Random-Matrix Type with Airy Kernel	264
	35.3 System of Differential Equations Associated with the Dyson Process	264
	35.4 Solutions of the Traveling-Wave Form of a Partial Differential Equation	265
36	<i>Pavlos Xenitidis</i>	
	Reductions on the Lattice and Painlevé Equations P_2, P_5, P_6	267
	36.1 Introduction	267
	36.2 Symmetries of the ABS Equations	268
	36.3 Reduction on the Lattice and Discrete Painlevé Equations	269
	36.4 Continuous Symmetry Reductions	269
	Comments	271
