

Contents

Zusammenfassung	vii
Summary	ix
1 Introduction	1
2 Literature Review and Contribution	5
2.1 Solution Methods of Optimal Control Problems	5
2.2 State of the Art of DP based Algorithms	7
2.3 Results and Contribution	9
3 Nonlinear Optimal Control	11
3.1 Preliminaries	11
3.2 Problem Introduction	12
3.3 Continuity of the Value Function	15
4 Sampled-Data and Perturbation Analysis	19
4.1 Sampled-Data Optimal Control	20
4.2 Perturbed Sampled-Data Optimal Control	25
4.3 Convergence Analysis	32
5 Finite Approximation and Computation	39
5.1 Finite Model	39
5.2 Approximation and Perturbation	46
5.3 Computational Complexity	48
5.4 The Role of the Relaxation	53
5.5 The Closed-Loop System	55
5.6 Summary	56
6 Hybrid Optimal Control	57
6.1 Problem Introduction	57
6.2 The Hybrid Bellman Equation	62
7 Hybrid Perturbed Sampled-Data Analysis	65
7.1 Perturbed Hybrid System	65
7.2 Perturbed Sampled-Data Model	68
7.3 Perturbed Sampled-Data Hybrid Optimal Control	70
7.4 Convergence Analysis	72
8 Finite Approximation	81
8.1 Finite Model	81

8.2	Finite Optimal Control Problem	92
8.3	Computation of the Hybrid Finite Feedback Strategy	94
8.4	The Closed-Loop System	96
8.5	Summary	98
9	Numerical Experiments	99
9.1	Inverted Pendulum on a Cart	100
9.2	Adaptive Cruise Control of a SMART Car	106
9.3	Summary	114
10	Conclusion	117
10.1	Summary	117
10.2	Outlook	118
A	Appendix	121
	Notation	125
	References	133
