# Vorwort

Das Tätigkeitsfeld des Fraunhofer-Instituts für Techno- und Wirtschaftsmathematik ITWM umfasst anwendungsnahe Grundlagenforschung, angewandte Forschung sowie Beratung und kundenspezifische Lösungen auf allen Gebieten, die für Techno- und Wirtschaftsmathematik bedeutsam sind.

In der Reihe »Berichte des Fraunhofer ITWM« soll die Arbeit des Instituts kontinuierlich einer interessierten Öffentlichkeit in Industrie, Wirtschaft und Wissenschaft vorgestellt werden. Durch die enge Verzahnung mit dem Fachbereich Mathematik der Universität Kaiserslautern sowie durch zahlreiche Kooperationen mit internationalen Institutionen und Hochschulen in den Bereichen Ausbildung und Forschung ist ein großes Potenzial für Forschungsberichte vorhanden. In die Berichtreihe sollen sowohl hervorragende Diplom- und Projektarbeiten und Dissertationen als auch Forschungsberichte der Institutsmitarbeiter und Institutsgäste zu aktuellen Fragen der Techno- und Wirtschaftsmathematik aufgenommen werden.

Darüber hinaus bietet die Reihe ein Forum für die Berichterstattung über die zahlreichen Kooperationsprojekte des Instituts mit Partnern aus Industrie und Wirtschaft.

Berichterstattung heißt hier Dokumentation des Transfers aktueller Ergebnisse aus mathematischer Forschungs- und Entwicklungsarbeit in industrielle Anwendungen und Softwareprodukte – und umgekehrt, denn Probleme der Praxis generieren neue interessante mathematische Fragestellungen.

## ABSTRACT

In this paper, the model of Köttgen, Barkey and Socie, which corrects the elastic stress and strain tensor histories at notches of a metallic specimen under non-proportional loading, is improved. It can be used in connection with any multiaxial  $\sigma$  -  $\varepsilon$  -law of incremental plasticity. For the correction model, we introduce a constraint for the strain components that goes back to the work of Hoffmann and Seeger. Parameter identification for the improved model is performed by Automatic Differentiation and an established least squares algorithm. The results agree accurately both with transient FE computations and notch strain measurements.

## KEYWORDS

Jiang's Model of Elastoplasticity, Stress-strain correction, Parameter Identification, Automatic Differentiation, Least-Squares Optimization, Coleman-Li Algorithm

## INTRODUCTION

In order to give a reliable lifetime prediction for an elastoplastic metallic body, which is subjected to exterior loads, good knowledge of the local stresses and strains over time is necessary. Numerical analysis may be applied, cf. Figure 1.

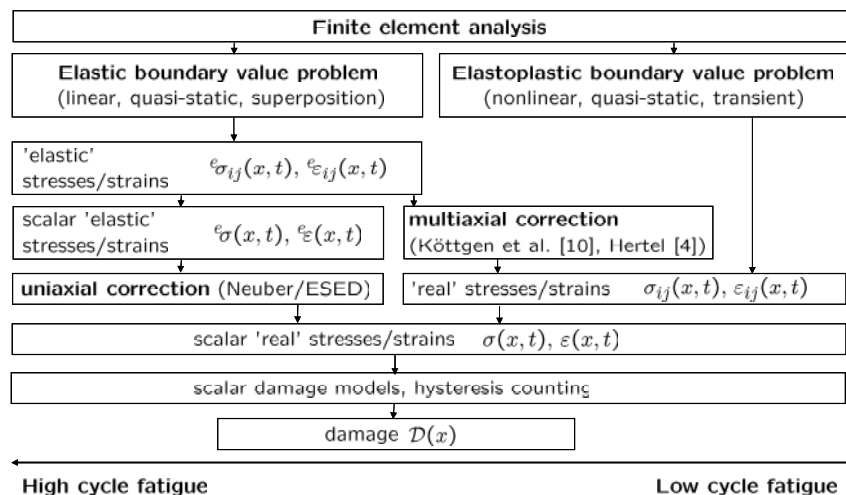

Figure 1: Possible ways in fatigue analysis

In LCF-analysis, the expensive transient elastoplastic boundary value problem with an appropriate elastoplastic constitutive material law  $\dot{\sigma}(x,t) = C^{ep}(x,t)\dot{\varepsilon}(x,t)$  is solved in order

to receive the ‘real’ elastoplastic stresses  $\sigma$  and strains  $\varepsilon$ . The following laws are well known and enjoy great popularity: Linear kinematic (plus isotropic) hardening [10, 11], Mroz-Garud [11], Armstrong-Frederick [11], Chaboche [11], Jiang-Sehitoglu [07], and many more ...

In HCF-analysis, the much cheaper linear elastic boundary value problem with Hooke’s constitutive law  ${}^e\sigma(x,t) = C(x){}^e\varepsilon(x,t)$  is solved to receive the ‘elastic’ stresses and strains  ${}^e\varepsilon$ . If the locations, where the elastic stress  ${}^e\sigma$  crosses the yield stress - and where it thus overestimates the elastoplastic stress  $\sigma$  -, are small and if the response of the body is linearly elastic almost everywhere, local corrections may be applied before projection onto scalar quantities is done. Here *multiaxial Neuber approaches*, cf. Glinka et al. [01, 03, 12], which are based on Neuber’s energy relation

$${}^e\varepsilon_{ij} {}^e\sigma_{ij} = \tilde{\varepsilon}_{ij} \tilde{\sigma}_{ij} \text{ (for each component),}$$

and *pseudo parameter approaches*, cf. Köttgen et al. and Hertel [05, 08, 09], have been suggested.

But so far, computational results for the cited multiaxial correction approaches differ excessively from transient elastoplastic FE solutions or measurements. In this paper, we propose the following two suggestions for Köttgen’s approach, which turned out to result in significant improvement of existing results: First, we impose *Seeger’s strain ratio relation* on the correction model, second, we perform parameter sensitivity analysis by *Automatic Differentiation (AD)*. Moreover, it is possible to give analytical error estimates (of global nature) for the corrected stresses and strains and a real mathematical justification for Köttgen’s approach in the case of linear kinematic hardening material, cf. [10]. The modified correction model lies somewhere between HCF and LCF in Figure 1: It is fast enough for HCF, the analytical estimates in [10] ensure a small error for the range of LCF.

## THE ORIGINAL STRESS-STRAIN CORRECTION MODEL OF KÖTTGEN

The model we consider is the pseudo parameter model of Köttgen et al. [05, 08, 09], which is called the ‘ ${}^e\sigma$ -approach’ therein. We simply name it ‘Köttgen’s model’. The input  ${}^e\sigma(t)$  at a fixed point  $x$  of the body and a set of (fictive) pseudo or ‘elastic’ parameters govern the movement of a (fictive) ‘elastic’ yield surface in a (fictive) ‘elastic’ stress space with a constitutive elastoplasticity law, which is appropriate for the material.

Figure 2: The ‘elastic’ stress space (left-hand) and the ‘correcting’ stress space (right-hand) in connection with Jiang’s constitutive model

The movements in the ‘correcting’ stress space with a ‘correcting’ yield surface are simultaneous to the movements in the elastic stress space with the *same* yield surface normal  ${}^e n(t)$ . Here the real material parameters together with the constitutive material (the

same as in the elastic stress space) uniquely determine the evolution. Output of the correcting stress space is the corrected stress  $\tilde{\sigma}(t)$  (and the corrected plastic strain  $\tilde{\varepsilon}^{pl}(t)$ , together with Hooke's law  $\tilde{\varepsilon}^{el}(t) = C^{-1}\tilde{\sigma}(t)$  yielding the corrected total strain  $\tilde{\varepsilon}(t) = \tilde{\varepsilon}^{el}(t) + \tilde{\varepsilon}^{pl}(t)$ ). For illustration cf. Figure 2, for details the reader is referred to [10] or the appendix in [08].

For linear kinematic hardening material, it is possible to write down the best choice for the pseudo parameters in an abstract fashion, cf. [10]. For more complex material laws, the best choice of pseudo parameters is still an open question, but for practice it is sufficient to determine them by least-squares-fitting.

## THE MODIFIED CORRECTION MODEL

We suggest to modify Kötting's model [08, 09, 10] by the introduction of Seeger's strain-ratio constraint for sharply notched axles [06]. This results in

$$\frac{{}^e\varepsilon_{11}(t)}{{}^e\varepsilon_{22}(t)} = \frac{\tilde{\varepsilon}_{11}(t)}{\tilde{\varepsilon}_{22}(t)}, \quad (1.1)$$

where 1 and 2 denote the local coordinate system directions, which are tangential to the notch root: 1 is the longitudinal direction, 2 is the circumferential direction, as it is displayed in Figure 3.

Figure 3: Choice of local coordinate system

Relation (1.1) constitutes a hard algebraic constraint (with given left-hand elastic strain ratio) on the differential equations of the Kötting model, thus, it becomes differential-algebraic. An appropriate predictor-corrector algorithm for its integration is given in [10]. We give two reasons, why to impose relation (1.1) on the correction model.

First, it is proved in [10], that it is *inherently impossible* for the original correction model to approximate each component of the plane stress tensor for uniaxial and biaxial loading. The reason is one of the main drawbacks of Kötting's model, namely that the difference of the corrected stress deviator  $dev \tilde{\sigma}$  and the corrected backstress  $\tilde{\alpha}$  is coupled in a simultaneous manner to the difference of the elastic stress deviator  $dev {}^e\sigma$  and the (fictive) 'elastic backstress'  ${}^e\alpha$ . I.e. the tensors  $dev {}^e\sigma - {}^e\alpha$  and  $dev \tilde{\sigma} - \tilde{\alpha}$  are collinear at any time, see the dashed tensors in Figure 2. Equivalently, the yield surface normals in both stress spaces coincide. For biaxial loading, the elastic stress is trapped in a plane, consequently so is the corrected stress. Therefore, it is clear that the existent results for the plane stress tensor [05, 08, 09] cannot be accurate in all components.

Second, the algebraic constraint (1.1) is motivated by Seeger's observation that in sharply notched regions, the relation

$$\frac{{}^e\varepsilon_{11}(t)}{{}^e\varepsilon_{22}(t)} \approx \frac{\varepsilon_{11}(t)}{\varepsilon_{22}(t)} \quad (1.2)$$

for the elastic FE and the elastoplastic FE strain holds approximately, cf. [06]. So it is very natural that the corrected total strain should satisfy the same relation. Observation (1.2) is purely empirical, a rigorous mathematical justification is still an open question. (For the case of combined axial tension and circumferential torsion, the elastic ratio at the left-hand side in (1.2) is a constant, independent of  $t$ .) Rule (1.1) gives additional information into the correction model, and it enforces the corrected stress tensor  $\tilde{\sigma}$  to break out of its plane as it is shown in Figure 4.

Figure 4: Elastic FE stress, Elastoplastic FE stress, original model and improved model

### PARAMETER IDENTIFICATION

The need to determine a huge amount of pseudo parameters is a drawback both of the original and of the improved correction model. This is a big problem especially for constitutive models, where the number of material parameters is already large. For the model of Jiang and Sehitoglu [07] for example, the number of material parameters that have to be identified lies somewhere between 40 and 80. For the correction models considered, there is a need for additional 40 – 80 pseudo parameters. For the nonlinear large-scale parameter identification, we use the well-established trust-region algorithm of Coleman and Li [02]. The

latter is implemented e.g. in the Optimization-Toolbox of MATLAB. It can be used for curve fitting in the least-squares sense, i.e.

$$\sum_n \|\tilde{\sigma}(t_n) - \sigma(t_n)\|^2 \rightarrow \min \quad \text{and} \quad \sum_n \|\tilde{\varepsilon}(t_n) - \varepsilon(t_n)\|^2 \rightarrow \min .$$

Constraints, as for example the positivity of some parameters, can be taken into account as well. It is a gradient based algorithm, therefore one has to evaluate the partial derivatives of the corrected stresses resp. strains with respect to the parameters, i.e.  $\partial\tilde{\sigma}(t_n)/\partial p_i$  and  $\partial\tilde{\varepsilon}(t_n)/\partial p_i$ . In order to do so, it is very effective and convenient to use the Automatic Differentiation (AD) technique [04], which computes the partial derivatives *analytically exact* in parallel to the integration of the differential-algebraic equations of the correction model.

## RESULTS AND CONCLUSION

A first example, which illustrates the improvement of the correction model and where we target at elastoplastic FE computations, has already been given in the foregoing section, cf. Figure 4.

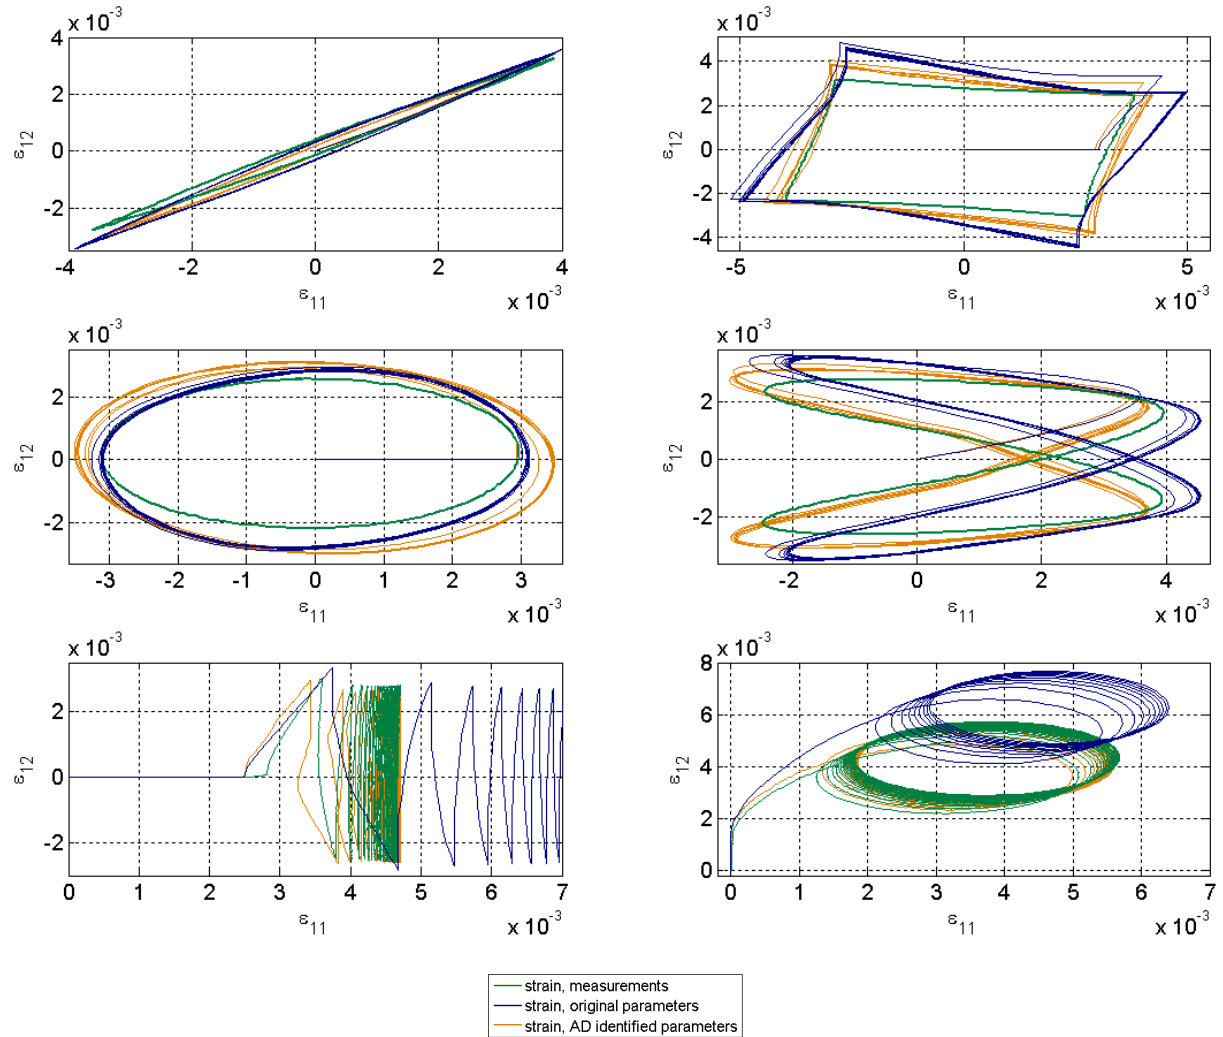

Figure 5: Measurements, original correction model by Köttgen [08, 09] with parameters from Hertel [05], improved model with parameters via AD, cf. [10]. Six different loading paths are displayed.

In a second example, we compare the improved model with strain measurements at the notch root of an axle, made of S460N steel. Here we continue the work of Hertel [05]. As the material exhibits the ratchetting effect, all computations have been performed with Jiang's [07] constitutive model, where 82 parameters have been identified by AD and the Coleman-Li algorithm. The results have been obtained after 20 Coleman-Li iterations. Compared to simple sensitivity computation via Finite Differences ('Exterior Differentiation'), a speed-up of five has been obtained with the tapeless AD-forward mode.

The essential thing from the physical point of view is, that our improved version of Köttgen's model together with Jiang's model and appropriate parameters is in fact able to reproduce the complex transient and highly nonlinear elastoplasticity effects accurately, based on a few linear elastic FE unit load cases, avoiding full transient nonlinear elastoplastic FE computations. (As a pointwise postprocessing it is clearly much faster than elastoplastic FE.) The results for the circular loading path (left column, middle line in Figure 5) are not completely satisfactory; they could be improved by the use of Döring's constitutive law, which takes out-of-phase phenomena better into account.

**Eine Übersicht zum Scheduling von Baustellen**  
Keywords: Projektplanung, Scheduling, Bauplanung, Bauindustrie  
(32 pages, 2005)

75. J. Linn  
**The Folgar-Tucker Model as a Differential Algebraic System for Fiber Orientation Calculation**  
Keywords: fiber orientation, Folgar-Tucker model, invariants, algebraic constraints, phase space, trace stability  
(15 pages, 2005)

76. M. Speckert, K. Dreßler, H. Mauch, A. Lion, G. J. Wierda  
**Simulation eines neuartigen Prüfsystems für Achserprobungen durch MKS-Modellierung einschließlich Regelung**  
Keywords: virtual test rig, suspension testing, multibody simulation, modeling hexapod test rig, optimization of test rig configuration  
(20 pages, 2005)

77. K.-H. Küfer, M. Monz, A. Scherrer, P. Süß, F. Alonso, A. S. A. Sultan, Th. Bortfeld, D. Craft, Chr. Thieke  
**Multicriteria optimization in intensity modulated radiotherapy planning**  
Keywords: multicriteria optimization, extreme solutions, real-time decision making, adaptive approximation schemes, clustering methods, IMRT planning, reverse engineering  
(51 pages, 2005)

78. S. Amstutz, H. Andrä  
**A new algorithm for topology optimization using a level-set method**  
Keywords: shape optimization, topology optimization, topological sensitivity, level-set  
(22 pages, 2005)

79. N. Etrrich  
**Generation of surface elevation models for urban drainage simulation**  
Keywords: Flooding, simulation, urban elevation models, laser scanning  
(22 pages, 2005)

80. H. Andrä, J. Linn, I. Matei, I. Shklyar, K. Steiner, E. Teichmann  
**OPTCAST – Entwicklung adäquater Strukturoptimierungsverfahren für Gießereien Technischer Bericht (KURZFASSUNG)**  
Keywords: Topologieoptimierung, Level-Set-Methode, Gießprozesssimulation, Gießtechnische Restriktionen, CAE-Kette zur Strukturoptimierung  
(77 pages, 2005)

81. N. Marheineke, R. Wegener  
**Fiber Dynamics in Turbulent Flows Part I: General Modeling Framework**

Keywords: fiber-fluid interaction; Cosserat rod; turbulence modeling; Kolmogorov's energy spectrum; double-velocity correlations; differentiable Gaussian fields  
(20 pages, 2005)

**Part II: Specific Taylor Drag**  
Keywords: flexible fibers;  $k-\epsilon$  turbulence model; fiber-turbulence interaction scales; air drag; random Gaussian aerodynamic force; white noise; stochastic differential equations; ARMA process  
(18 pages, 2005)

82. C. H. Lampert, O. Wirjadi  
**An Optimal Non-Orthogonal Separation of the Anisotropic Gaussian Convolution Filter**  
Keywords: Anisotropic Gaussian filter, linear filtering, orientation space, nD image processing, separable filters  
(25 pages, 2005)

83. H. Andrä, D. Stoyanov  
**Error indicators in the parallel finite element solver for linear elasticity DDFEM**  
Keywords: linear elasticity, finite element method, hierarchical shape functions, domain decomposition, parallel implementation, a posteriori error estimates  
(21 pages, 2006)

84. M. Schröder, I. Solchenbach  
**Optimization of Transfer Quality in Regional Public Transit**  
Keywords: public transit, transfer quality, quadratic assignment problem  
(16 pages, 2006)

85. A. Naumovich, F. J. Gaspar  
**On a multigrid solver for the three-dimensional Biot poroelasticity system in multilayered domains**  
Keywords: poroelasticity, interface problem, multigrid, operator-dependent prolongation  
(11 pages, 2006)

86. S. Panda, R. Wegener, N. Marheineke  
**Slender Body Theory for the Dynamics of Curved Viscous Fibers**  
Keywords: curved viscous fibers; fluid dynamics; Navier-Stokes equations; free boundary value problem; asymptotic expansions; slender body theory  
(14 pages, 2006)

87. E. Ivanov, H. Andrä, A. Kudryavtsev  
**Domain Decomposition Approach for Automatic Parallel Generation of Tetrahedral Grids**  
Key words: Grid Generation, Unstructured Grid, Delaunay Triangulation, Parallel Programming, Domain Decomposition, Load Balancing  
(18 pages, 2006)

88. S. Tiwari, S. Antonov, D. Hietel, J. Kuhnert, R. Wegener  
**A Meshfree Method for Simulations of Interactions between Fluids and Flexible Structures**  
Key words: Meshfree Method, FPM, Fluid Structure Interaction, Sheet of Paper, Dynamical Coupling  
(16 pages, 2006)

89. R. Ciegis, O. Iliev, V. Starikovicius, K. Steiner  
**Numerical Algorithms for Solving Problems of Multiphase Flows in Porous Media**  
Keywords: nonlinear algorithms, finite-volume method, software tools, porous media, flows  
(16 pages, 2006)

90. D. Niedziela, O. Iliev, A. Latz  
**On 3D Numerical Simulations of Viscoelastic Fluids**

Keywords: non-Newtonian fluids, anisotropic viscosity, integral constitutive equation  
(18 pages, 2006)

91. A. Winterfeld

**Application of general semi-infinite Programming to Lapidary Cutting Problems**

Keywords: large scale optimization, nonlinear programming, general semi-infinite optimization, design centering, clustering  
(26 pages, 2006)

92. J. Orlik, A. Ostrovska

**Space-Time Finite Element Approximation and Numerical Solution of Hereditary Linear Viscoelasticity Problems**

Keywords: hereditary viscoelasticity; kern approximation by interpolation; space-time finite element approximation, stability and a priori estimate  
(24 pages, 2006)

93. V. Rutka, A. Wiegmann, H. Andrä

**EJIM for Calculation of effective Elastic Moduli in 3D Linear Elasticity**

Keywords: Elliptic PDE, linear elasticity, irregular domain, finite differences, fast solvers, effective elastic moduli  
(24 pages, 2006)

94. A. Wiegmann, A. Zemitis

**EJ-HEAT: A Fast Explicit Jump Harmonic Averaging Solver for the Effective Heat Conductivity of Composite Materials**

Keywords: Stationary heat equation, effective thermal conductivity, explicit jump, discontinuous coefficients, virtual material design, microstructure simulation, EJ-HEAT  
(21 pages, 2006)

95. A. Naumovich

**On a finite volume discretization of the three-dimensional Biot poroelasticity system in multilayered domains**

Keywords: Biot poroelasticity system, interface problems, finite volume discretization, finite difference method  
(21 pages, 2006)

96. M. Krekel, J. Wenzel

**A unified approach to Credit Default Swaption and Constant Maturity Credit Default Swap valuation**

Keywords: LIBOR market model, credit risk, Credit Default Swaption, Constant Maturity Credit Default Swap-method  
(43 pages, 2006)

97. A. Dreyer

**Interval Methods for Analog Circuits**

Keywords: interval arithmetic, analog circuits, tolerance analysis, parametric linear systems, frequency response, symbolic analysis, CAD, computer algebra  
(36 pages, 2006)

98. N. Weigel, S. Weihe, G. Bitsch, K. Dreßler  
**Usage of Simulation for Design and Optimization of Testing**

Keywords: Vehicle test rigs, MBS, control, hydraulics, testing philosophy  
(14 pages, 2006)

99. H. Lang, G. Bitsch, K. Dreßler, M. Speckert  
**Comparison of the solutions of the elastic and elastoplastic boundary value problems**

Keywords: Elastic BVP, elastoplastic BVP, variational inequalities, rate-independency, hysteresis, linear kinematic hardening, stop- and play-operator  
(21 pages, 2006)

100. M. Speckert, K. Dreßler, H. Mauch

**MBS Simulation of a hexapod based suspension test rig**

Keywords: Test rig, MBS simulation, suspension, hydraulics, controlling, design optimization  
(12 pages, 2006)

101. S. Azizi Sultan, K.-H. Küfer

**A dynamic algorithm for beam orientations in multicriteria IMRT planning**

Keywords: radiotherapy planning, beam orientation optimization, dynamic approach, evolutionary algorithm, global optimization  
(14 pages, 2006)

102. T. Götz, A. Klar, N. Marheineke, R. Wegener

**A Stochastic Model for the Fiber Lay-down Process in the Nonwoven Production**

Keywords: fiber dynamics, stochastic Hamiltonian system, stochastic averaging  
(17 pages, 2006)

103. Ph. Süß, K.-H. Küfer

**Balancing control and simplicity: a variable aggregation method in intensity modulated radiation therapy planning**

Keywords: IMRT planning, variable aggregation, clustering methods  
(22 pages, 2006)

104. A. Beaudry, G. Laporte, T. Melo, S. Nickel

**Dynamic transportation of patients in hospitals**

Keywords: in-house hospital transportation, dial-a-ride, dynamic mode, tabu search  
(37 pages, 2006)

105. Th. Hanne

**Applying multiobjective evolutionary algorithms in industrial projects**

Keywords: multiobjective evolutionary algorithms, discrete optimization, continuous optimization, electronic circuit design, semi-infinite programming, scheduling  
(18 pages, 2006)

106. J. Franke, S. Halim

**Wild bootstrap tests for comparing signals and images**

Keywords: wild bootstrap test, texture classification, textile quality control, defect detection, kernel estimate, nonparametric regression  
(13 pages, 2007)

107. Z. Drezner, S. Nickel

**Solving the ordered one-median problem in the plane**

Keywords: planar location, global optimization, ordered median, big triangle small triangle method, bounds, numerical experiments  
(21 pages, 2007)

108. Th. Götz, A. Klar, A. Unterreiter, R. Wegener

**Numerical evidence for the non-existing of solutions of the equations describing rotational fiber spinning**

Keywords: rotational fiber spinning, viscous fibers, boundary value problem, existence of solutions  
(11 pages, 2007)

109. Ph. Süß, K.-H. Küfer

**Smooth intensity maps and the Bortfeld-Boyer sequencer**

Keywords: probabilistic analysis, intensity modulated radiotherapy treatment (IMRT), IMRT plan application, step-and-shoot sequencing  
(8 pages, 2007)

110. E. Ivanov, O. Gluchshenko, H. Andrä, A. Kudryavtsev

**Parallel software tool for decomposing and meshing of 3d structures**

Keywords: a-priori domain decomposition, unstructured grid, Delaunay mesh generation  
(14 pages, 2007)

111. O. Iliev, R. Lazarov, J. Willems

**Numerical study of two-grid preconditioners for 1d elliptic problems with highly oscillating discontinuous coefficients**

Keywords: two-grid algorithm, oscillating coefficients, preconditioner  
(20 pages, 2007)

112. L. Bonilla, T. Götz, A. Klar, N. Marheineke, R. Wegener

**Hydrodynamic limit of the Fokker-Planck equation describing fiber lay-down processes**

Keywords: stochastic differential equations, Fokker-Planck equation, asymptotic expansion, Ornstein-Uhlenbeck process  
(17 pages, 2007)

113. S. Rief

**Modeling and simulation of the pressing section of a paper machine**

Keywords: paper machine, computational fluid dynamics, porous media  
(41 pages, 2007)

114. R. Ciegis, O. Iliev, Z. Lakdawala

**On parallel numerical algorithms for simulating industrial filtration problems**

Keywords: Navier-Stokes-Brinkmann equations, finite volume discretization method, SIMPLE, parallel computing, data decomposition method  
(24 pages, 2007)

115. N. Marheineke, R. Wegener

**Dynamics of curved viscous fibers with surface tension**

Keywords: Slender body theory, curved viscous fibers with surface tension, free boundary value problem  
(25 pages, 2007)

116. S. Feth, J. Franke, M. Speckert

**Resampling-Methoden zur mse-Korrektur und Anwendungen in der Betriebsfestigkeit**

Keywords: Weibull, Bootstrap, Maximum-Likelihood, Betriebsfestigkeit  
(16 pages, 2007)

117. H. Knaf

**Kernel Fisher discriminant functions – a concise and rigorous introduction**

Keywords: wild bootstrap test, texture classification, textile quality control, defect detection, kernel estimate, nonparametric regression  
(30 pages, 2007)

118. O. Iliev, I. Rybak

**On numerical upscaling for flows in heterogeneous porous media**

Keywords: numerical upscaling, heterogeneous porous media, single phase flow, Darcy's law, multiscale problem, effective permeability, multipoint flux approximation, anisotropy  
(17 pages, 2007)

119. O. Iliev, I. Rybak

**On approximation property of multipoint flux approximation method**

- Keywords: *Multipoint flux approximation, finite volume method, elliptic equation, discontinuous tensor coefficients, anisotropy*  
(15 pages, 2007)
120. O. Iliev, I. Rybak, J. Willems  
**On upscaling heat conductivity for a class of industrial problems**  
Keywords: *Multiscale problems, effective heat conductivity, numerical upscaling, domain decomposition*  
(21 pages, 2007)
121. R. Ewing, O. Iliev, R. Lazarov, I. Rybak  
**On two-level preconditioners for flow in porous media**  
Keywords: *Multiscale problem, Darcy's law, single phase flow, anisotropic heterogeneous porous media, numerical upscaling, multigrid, domain decomposition, efficient preconditioner*  
(18 pages, 2007)
122. M. Brickenstein, A. Dreyer  
**POLYBORI: A Gröbner basis framework for Boolean polynomials**  
Keywords: *Gröbner basis, formal verification, Boolean polynomials, algebraic cryptanalysis, satisfiability*  
(23 pages, 2007)
123. O. Wirjadi  
**Survey of 3d image segmentation methods**  
Keywords: *image processing, 3d, image segmentation, binarization*  
(20 pages, 2007)
124. S. Zeytun, A. Gupta  
**A Comparative Study of the Vasicek and the CIR Model of the Short Rate**  
Keywords: *interest rates, Vasicek model, CIR-model, calibration, parameter estimation*  
(17 pages, 2007)
125. G. Hanselmann, A. Sarishvili  
**Heterogeneous redundancy in software quality prediction using a hybrid Bayesian approach**  
Keywords: *reliability prediction, fault prediction, non-homogeneous poisson process, Bayesian model averaging*  
(17 pages, 2007)
126. V. Maag, M. Berger, A. Winterfeld, K.-H. Küfer  
**A novel non-linear approach to minimal area rectangular packing**  
Keywords: *rectangular packing, non-overlapping constraints, non-linear optimization, regularization, relaxation*  
(18 pages, 2007)
127. M. Monz, K.-H. Küfer, T. Bortfeld, C. Thieke  
**Pareto navigation – systematic multi-criteria-based IMRT treatment plan determination**  
Keywords: *convex, interactive multi-objective optimization, intensity modulated radiotherapy planning*  
(15 pages, 2007)
128. M. Krause, A. Scherrer  
**On the role of modeling parameters in IMRT plan optimization**  
Keywords: *intensity-modulated radiotherapy (IMRT), inverse IMRT planning, convex optimization, sensitivity analysis, elasticity, modeling parameters, equivalent uniform dose (EUD)*  
(18 pages, 2007)
129. A. Wiegmann  
**Computation of the permeability of porous materials from their microstructure by FFF-Stokes**  
Keywords: *permeability, numerical homogenization, fast Stokes solver*  
(24 pages, 2007)
130. T. Melo, S. Nickel, F. Saldanha da Gama  
**Facility Location and Supply Chain Management – A comprehensive review**  
Keywords: *facility location, supply chain management, network design*  
(54 pages, 2007)
131. T. Hanne, T. Melo, S. Nickel  
**Bringing robustness to patient flow management through optimized patient transports in hospitals**  
Keywords: *Dial-a-Ride problem, online problem, case study, tabu search, hospital logistics*  
(23 pages, 2007)
132. R. Ewing, O. Iliev, R. Lazarov, I. Rybak, J. Willems  
**An efficient approach for upscaling properties of composite materials with high contrast of coefficients**  
Keywords: *effective heat conductivity, permeability of fractured porous media, numerical upscaling, fibrous insulation materials, metal foams*  
(16 pages, 2008)
133. S. Gelareh, S. Nickel  
**New approaches to hub location problems in public transport planning**  
Keywords: *integer programming, hub location, transportation, decomposition, heuristic*  
(25 pages, 2008)
134. G. Thömmes, J. Becker, M. Junk, A. K. Vainkuntam, D. Kehrwald, A. Klar, K. Steiner, A. Wiegmann  
**A Lattice Boltzmann Method for immiscible multiphase flow simulations using the Level Set Method**  
Keywords: *Lattice Boltzmann method, Level Set method, free surface, multiphase flow*  
(28 pages, 2008)
135. J. Orlik  
**Homogenization in elasto-plasticity**  
Keywords: *multiscale structures, asymptotic homogenization, nonlinear energy*  
(40 pages, 2008)
136. J. Almqvist, H. Schmidt, P. Lang, J. Deitmer, M. Jirstrand, D. Prätzel-Wolters, H. Becker  
**Determination of interaction between MCT1 and CAII via a mathematical and physiological approach**  
Keywords: *mathematical modeling; model reduction; electrophysiology; pH-sensitive microelectrodes; proton antenna*  
(20 pages, 2008)
137. E. Savenkov, H. Andrä, O. Iliev  
**An analysis of one regularization approach for solution of pure Neumann problem**  
Keywords: *pure Neumann problem, elasticity, regularization, finite element method, condition number*  
(27 pages, 2008)
138. O. Berman, J. Kalcsics, D. Krass, S. Nickel  
**The ordered gradual covering location problem on a network**  
Keywords: *gradual covering, ordered median function, network location*  
(32 pages, 2008)
139. S. Gelareh, S. Nickel  
**Multi-period public transport design: A novel model and solution approaches**  
Keywords: *Integer programming, hub location, public transport, multi-period planning, heuristics*  
(31 pages, 2008)
140. T. Melo, S. Nickel, F. Saldanha-da-Gama  
**Network design decisions in supply chain planning**  
Keywords: *supply chain design, integer programming models, location models, heuristics*  
(20 pages, 2008)
141. C. Lautensack, A. Särkkä, J. Freitag, K. Schladitz  
**Anisotropy analysis of pressed point processes**  
Keywords: *estimation of compression, isotropy test, nearest neighbour distance, orientation analysis, polar ice, Ripley's K function*  
(35 pages, 2008)
142. O. Iliev, R. Lazarov, J. Willems  
**A Graph-Laplacian approach for calculating the effective thermal conductivity of complicated fiber geometries**  
Keywords: *graph laplacian, effective heat conductivity, numerical upscaling, fibrous materials*  
(14 pages, 2008)
143. J. Linn, T. Stephan, J. Carlsson, R. Bohlin  
**Fast simulation of quasistatic rod deformations for VR applications**  
Keywords: *quasistatic deformations, geometrically exact rod models, variational formulation, energy minimization, finite differences, nonlinear conjugate gradients*  
(7 pages, 2008)
144. J. Linn, T. Stephan  
**Simulation of quasistatic deformations using discrete rod models**  
Keywords: *quasistatic deformations, geometrically exact rod models, variational formulation, energy minimization, finite differences, nonlinear conjugate gradients*  
(9 pages, 2008)
145. J. Marburger, N. Marheineke, R. Pinnau  
**Adjoint based optimal control using mesh-less discretizations**  
Keywords: *Mesh-less methods, particle methods, Eulerian-Lagrangian formulation, optimization strategies, adjoint method, hyperbolic equations*  
(14 pages, 2008)
146. S. Desmettre, J. Gould, A. Szimayer  
**Own-company stockholding and work effort preferences of an unconstrained executive**  
Keywords: *optimal portfolio choice, executive compensation*  
(33 pages, 2008)
147. M. Berger, M. Schröder, K.-H. Küfer  
**A constraint programming approach for the two-dimensional rectangular packing problem with orthogonal orientations**  
Keywords: *rectangular packing, orthogonal orientations non-overlapping constraints, constraint propagation*  
(13 pages, 2008)

148. K. Schladitz, C. Redenbach, T. Sych,  
M. Godehardt

**Microstructural characterisation of open  
foams using 3d images**

*Keywords: virtual material design, image analysis, open  
foams*

(30 pages, 2008)

149. E. Fernández, J. Kalcsics, S. Nickel,  
R. Ríos-Mercado

**A novel territory design model arising in  
the implementation of the WEEE-Directive**

*Keywords: heuristics, optimization, logistics, recycling*

(28 pages, 2008)

150. H. Lang, J. Linn

**Lagrangian field theory in space-time for  
geometrically exact Cosserat rods**

*Keywords: Cosserat rods, geometrically exact rods,  
small strain, large deformation, deformable bodies,  
Lagrangian field theory, variational calculus*

(19 pages, 2009)

151. K. Dreßler, M. Speckert, R. Müller,  
Ch. Weber

**Customer loads correlation in truck engi-  
neering**

*Keywords: Customer distribution, safety critical compo-  
nents, quantile estimation, Monte-Carlo methods*

(11 pages, 2009)

152. H. Lang, K. Dreßler

**An improved multiaxial stress-strain correc-  
tion model for elastic FE postprocessing**

*Keywords: Jiang's model of elastoplasticity, stress-strain  
correction, parameter identification, automatic differ-  
entiation, least-squares optimization, Coleman-Li algo-  
rithm*

(6 pages, 2009)

Status quo: March 2009
