# Table of Contents

Need for a local level of standardisation: the case of Torino  
Sophie Alpe, Frank M. Go, Henk. J. de Vries; Erasmus U., NL ........................................... 1

An innovative approach for production information management based on industrial standards: current developments and perspectives  
J.L. Barraud; Schneider Electric Industries SAS, FR; A.F. Cutting-Decelle; IG2I, FR and University of Geneva, CH; S. Douai, E.E. El Manser, F. Penet, A. Peresutti, A. Stęczynski, G.F. Vidal, IG2I, FR; R.I. Young; Loughborough University, UK ....................... 17

Standardization Strategies of Innovative German companies – The Relation Between Implementing and Developing Standards  
Knut Blind & Julius Rauber; TU Berlin, DE ......................................................... 33

Standards development in support of the Europe 2020 ‘smart growth’ objective – Evidence from Germany and the USA  
Laure Brévignon-Dodin & Eoin O’Sullivan; U. Cambridge, UK ........................................ 49

The role of standards for innovation in the electric car industry  
Frank Steven Dahl Andersen; Danish Standards Foundation, DK ..................................... 63

Standards and Innovation: A Systematic Literature Review  
Frank Steven Dahl Andersen; Danish Standards Foundation, DK ..................................... 77

Measuring the benefits of open standards: Beyond the motion Gerkens and the Dutch Court of Audit report  
Tineke Egyedi, Bert Enserink; TU Delft, NL .................................................................... 93

Voluntary food marks in the EU: can a link be shown with competitiveness?  
Marc Gambaraza; Japan External Trade Organization, CH ............................................. 109

A Understanding the Standards War from a Technological Innovation System Perspective – The Case of 3G Standards Competition in China  
Shu Gao; U. of Utrecht, NL; Tineke M. Egyedi; TU Delft, NL; Harro van Lente; U. of Utrecht, NL .............................................................................. 125

Standardization by Cooperation: a case-study of the German collaboration for the Brazilian metrology  
Jorge Gonçalves & Taynah Souza; Inmetro, BR ................................................................. 141

Supplier’s motives for applying company standards – how company standards can affect the buyer-supplier relationship  
Anne-Marie Großmann; TU Berlin, DE ............................................................................ 155

Civil society organisations participating in ISO TC 228 and ISO TC 229: the INTERNORM project and its future  
Christophe Hauert; Marc Audéat, Danielle Bütsch Häberlin, Jean-Christophe Graz, Alain Kaufmann; U. de Lausanne, CH ............................................................ 171

International Standards, Product substitutability, and Global Trade Network  
Naohiko Ijiri; Nihon University College of Economics, JP; Norihiko Yamano, Guannan Mia; OECD, FR .............................................................................................. 187

Strategic Positioning in ICT Standardisation  
Kai Jakobs; RWTH Aachen U., DE ....................................................................................... 201

Standardization, value configurations and implications for business model innovation  
Magnus Johansson; Lund University, SE ............................................................................ 217
Just-in-time inventions and the development of standards: How firms use opportunistic strategies to obtain standard-essential patents (SEPs)
Byeongwoo Kang; U. Tokyo, JP & Rudi Bekkers; TU Eindhoven, NL................................. 231

Axel Mangelsdorf; BAM & TU Berlin, DE and Tilman Denkler; BAM, DE................................. 247

Varieties of Standardization: On the Comparative Advantage and Systemic Differences between European, American and Chinese Standardization
Niclas Meyer; Fraunhofer ISI, DE.................................................................................. 263

Experiences with participation of Serbian academics in national technical committees
Ivana Mijatovic; U. of Belgrade, RS................................................................................. 279

The Role of the Union Courts in Preventing Technical Barriers to Trade Within the Internal Market
Justin Pierce; Lund U.; SE.............................................................................................. 295

Building consensus in life cycle assessment: The potential for a Canada Product Category Rules standard to enhance credibility in greenhouse gas emissions calculations for Alberta’s oil sands
Anne Rainville; U. of Calgary, CA.................................................................................. 311

The participation in standardization activities – A firm level analysis of formal and company standardization
Cesare Riillo; STATEC, LU.......................................................................................... 325

Preparing a Success Story in the Background – The role of the premises of standard-setting at ISO 26000
Coline Ruwet; Brussels Management School, BE............................................................. 341

Modeling Dynamic Spectrum Access Infrastructure Development as a Techno-Economic System
Gintaré Sukarevičienė & Vladislav Fomin; Vytautas Magnus U., LT................................. 357

From the Decimal Metric System via the SI to ISO/IEC Standard 80000: Quantities and Units
Hans Teichmann; Privatier; Lausanne, CH........................................................................ 367

The euro crisis – A standardisation perspective
Henk J. de Vries; Erasmus U., NL.................................................................................. 379

Economic benefits of standards – Results and future perspectives of the ‘ISO Methodology’
Reinhard Weissinger; ISO, CH......................................................................................... 385

Combining Different Modes of Standard Setting – Analysing Strategies and the Case of Connectors for Charging Electric Vehicles in Europe
Paul Moritz Wiegmann; Erasmus U., NL.......................................................................... 397

Ethical and Privacy-Specific Risks – Flaws of Critical Infrastructure Protection and Solutions Offered by Standardisation
Simone Wurster; TU Berlin, DE.................................................................................... 413

Researchers’ Participation in Standardisation in Relation to their Scientific Publishing and Patenting Activities: An Explorative Case Study from a Public Research Organisation in Germany
Aikaterini Zi; BAM, DE & Knut Blind; TU Berlin, DE and RSM, NL................................. 429
