# Table of Contents

## Keynote Lectures

*Simaan M. AbouRizk*
Innovations in Tunnelling Construction Management: Applications of Simulation 3

*Hans Muhlhaus and Lutz Gross*
Interface Modelling Based on Levelsets 19

*Jian Zhao, Andrea Delisio and Tohid Kazerani*
A Coupled Discontinuum-continuum Numerical Model for the Analysis of Face Instabilities in Blocky Rock Masses 31

## Numerical Modeling in Mechanized Tunneling

*Ba Trung Cao, Klaus Chmelina, Janosch Stascheit and Günther Meschke*
Enhanced Monitoring and Simulation Assisted Tunnelling (EMSAT) 41

*Kazuhiro Komiya, Ken Utsugi and Takashi Nakayama*
Finite Element Simulation of Ground Behaviour due to Modular Approached Tunnel Work 51

*Inacio Fernandes, Ulrich Maidl, Marc Comulada and Stefan Hintz*
Geotechnical Calculation and Process Controlling Approach for Shield Tunnelling Settlement Minimisation in Urban Areas 65

*Alireza Afshani, Hiroshi Dobashi, Shinji Konishi, Kazuhito Komiya, Hirokazu Akagi and Kaho Orihara*
Shield Tunneling Advancement Simulation using 3D FEM considering Distance Factor and its Validation 75

*Abdulla Alsahly, Janosch Stascheit and Günther Meschke*
Computational Framework for 3D Adaptive Simulation of Excavation and Advancement Processes in Mechanized Tunneling 85

*Vasiliki Founta, Jelena Ninic, Andrew J. Whittle, Günther Meschke and Janosch Stascheit*
Numerical Simulation of Ground Movements Due to EPB Tunnelling in Clay 97

*Daniele Festa, Wout Broere and Johan W. Bosch*
On the Effects of the TBM-shield Body Articulation on Tunnelling in Soft Soil 109
Riccardo Castellanza, David Betti, Luca Mancinelli, Carlo Morerio, Stefano Tedesco and Victor Bueno
3D Numerical Prediction for TBM-EPB Excavations under Railways Bridges in Milan (Italy) 119

Mehdi Bakhshi and Verya Nasri
Structural Design of Segmental Tunnel Linings 131

Mitsutaka Sugimoto, Lam Gia Le, Masakazu Higashikawa, Senji Ishizuka and Tatsuki Tamai
Numerical Analysis on Measured Pipe Behavior during Pipe Jacking 139

Thomas Putke, Mark Alexander Ahrens and Peter Mark
Towards Topology and Shape Optimised Concrete Linings for Shear Load Transfer in Ring Joints 147

Enrico Soranzo and Wei Wu
Experimental and Numerical Investigation on Shallow Tunnelling in Unsaturated Soils 157

Marwan Al Heib, Fabrice Emeriault and Jean-Bernard Kazmierczak
Periphery Trench for Reducing the Impact of Surface Subsidence on Structures 163

Rüdiger Giese, Silke Hock, Kay Krüger, Stefan Lüth and Elena Martin Diaz
Seismic Prediction on Tunnel Boring Machines – Comparison of Active Seismic Sources and Drilling Noise Measurements 177

Arturo Galván and Fernando Peña
Structural Behaviour of Segmented Tunnels taking into Account the Interaction between Rings 183

Takahiro Konda, Junichi Nagaya, Tadashi Hashimoto, Hossain M. Shahin and Teruo Nakai
In situ Measurement and Numerical Analysis on Tunnel Lining and Ground Behaviour due to Shield Excavation 191

Constitutive Models for Support Materials

Karel Vojtásik, Eva Hrubesova, Marek Mohyla and Lukas Duris
An Analytical Model of a System of the Concentric Rings to State the Stresses in the Material Heterogeneous Cross Section of a Steel Shotcrete Tunnel Lining 205

Taous Kamel, Ali Limam and Claire Silvani
Masonry Weathering of the Metro de Paris Gallery: Modeling via a Continuum Approach 213

Yijian Zhan and Günther Meschke
A Multiscale Oriented Concept for the Finite Element Analyses of Fiber Reinforced Concrete Tunnel Linings 221
Javier Garcia-Barba, Roberto Tomás Jover, Miguel Cano González and David Bru Orts
The Sacrificial Gallery in Tunnelling 233

D.J. Liu, H.W. Huang, Y.D. Xue and M.Z. Wang
Experimental Investigation on Static Behaviour of Tunnel Lining Strengthened by Textile-reinforced Concrete 241

Modeling of Tunneling in Squeezing Ground Conditions

Apostolos Vrakas and Georgios Anagnostou
A Closed-Form Solution for the Ground Response Curve of Circular Tunnels Considering Large Deformations 259

Weijie Dong and Georgios Anagnostou
Evaluation of a Modified Hardening Model for Squeezing Rocks in Tunneling 267

Rohola Hasanpour, Bahtiyar Ünver and Jamal Rostami
Time Dependent Numerical Analysis for Investigation of Entrapment Risks in DS-TBM Tunnelling in Squeezing Grounds 275

Hossain M. Shahin, Teruo Nakai and Sho Kuroi
Tunnel Behavior Subjected to Repeated Shear Deformation-model Test and Finite Element Analysis 283

Numerical Simulation of Construction Processes in Mechanized Tunneling

Puviyarrasan Manickam, Felix Hegemann, Karlheinz Lehner, Christian Koch and Markus König
Interaction Modelling for Coupling Simulations using SysML 295

Olga Špačková and Daniel Straub
Probabilistic Assessment of Tunnel Construction Time Using Dynamic Bayesian Network 303

Trung Thanh Dang, Britta Schoessler and Markus Thewes
Process Simulation of Microtunnelling Operations for Productivity Assessment Depending on Ground Conditions 311

Ruben Duhme, Kambiz Sadri, Tobias Rahm, Markus Thewes and Markus König
TBM Performance Prediction by Process Simulation 323

Back Analysis and Inverse Problems

Luan T. Nguyen and Tamara Nestorović
Application of the Extended Kalman Filter for Soil Parameter Identification during Tunnel Excavation 337
Veselin Zarev, Maria Datcheva, Tom Schanz and Ivan Dimov
Soil-Model Parameters Identification via Back Analysis for Numerical Simulation of Shield Tunneling 345

Emőke Imre, Tom Schanz and Csaba Hegedűs
Some Thoughts about Solving Non-linear Inverse Problems 357

Jörg Meier and Tom Schanz
Benchmarking of Optimization Algorithms 365

Domenico Gallipoli, Youliang Zhang and Dengxue Liu
Comparison of Optimization Algorithms for Identification of Parameter Values in Unsaturated Soils 373

Tamara Nestorović and Luan T. Nguyen
Kalman Filter – from Control Applications to Identification in Geomechanical Problems 381

Geotechnical Models and Geostatistics

Torsten Gorka and Stephan Peters
Characterization of Rock Mass Conditions and Quality Control of Tunnel Support 391

Václav Šmilauer and Anastasia Blioumi
Cross-anisotropic Rock Modelled with Discrete Methods 397

Roland Plassart, Simon Raude, François Laigle and Alexandra Silvestre
Hydromechanical Modelling of an Underground Excavation with Plastic/Viscoplastic Constitutive Equations Associated with Higher Order Continuum Methods 411

Thomas Kopp
Electrical Monitoring of Ambient Geological and Hydraulic Conditions Beyond Tunnels and Underground Facilities 421

Computational Failure Analysis in Subsurface Engineering

Bert Schädlich, Helmut F. Schweiger and Thomas Marcher
Numerical Analysis of Swelling Deformations in Tunnelling – a Case Study 429

Carlo Callari and Valentino Fasano
Damage Analysis for Wells in CO₂ Storage Sites 437

David Unteregger, Benjamin Fuchs and Günter Hofstetter
Damage Plasticity Model for Intact Rock 449

Markus J. Mikl, Thomas Antretter, Martin Gimpel and Gerhard Pittino
Determination of Uniaxial Tensile Strength of Rock Materials with Numerical Methods 457
Damage Analysis and Risk Assessment for Existing Buildings

Jori M.J. Kappen, Giorgia Giardina, Max A.N. Hendriks and Jan G. Rots
3D Numerical Analysis of Tunnelling Induced Damage: the Influence of the Alignment of a Masonry Building with the Tunnel Axis

Hongwei Huang
Cut-slope Versus Shallow Tunnel: a Risk Management Perspective During Construction

Steffen Schindler and Peter Mark
Evaluation of Building Stiffness in the Risk-assessment of Structures Affected by Settlements

Yinfei Cai, Thierry Verdel and Olivier Deck
Topography Influence on Subsidence due to Horizontal Underground Mining Using the Influence Function Method

Carles Camós and Climent Molins
A 3D Temporal Evolutionary Numerical Model of a Masonry Building in Barcelona subjected to Tunnelling Subsidence

Ali Helwa, Manal Salem and Mostafa Mossaad
Three Dimensional Finite Element Analysis of a Strutted Sheetpile Supporting a Deep Excavation

Emilios M. Comodromos, Mello C. Papadopoulou and Georgios K. Konstantinidis
Effects from a TBM-EPB to Adjacent Buildings: 3D Simulation of a Twin Tunnel

Teruo Nakai, Hossain Md. Shahin, Toshikazu Iwata and Sho Kuroi
Influence of Tunneling on Nearby Existing Building and/or Tunnel: Model Test and Finite Element Analysis

Julie A. Clarke and Debra F. Laefer
Pioneering Real Time Computational Models for Building Damage Prediction during Adjacent Tunnel Excavation

Anthony Bauer, Anmol Bedi, Vojtech Gall and Philippe Bourdon
Prediction of Structural Movements due to Large Diameter Twin TBM Tunnels using Bayesian Updating

Navid Allahverdi and Verya Nasri
Three Dimensional Numerical Analyses for Assessing Mechanized Tunnelling Impact on Existing Structures

Multiphase Models and Coupled Problems in Tunneling

Shu Liu, Renchao Lu, Xian Liu and Xiaofei Guan
A Dual Random Two-scale Model for Estimating the Thermal Expansion Coefficient of Early-age Concrete
Paolo Perazzelli and Georgios Anagnostou
Approximations and Mesh Sensitivity Induced by the Simplified Modelling of Grouted Bolts by One-dimensional Tension Elements 579

Alexander Schaufler, Christian Becker, Holger Steeb and Alexander Scheuermann
Simulation of the Backfilling Process with Annular Gap Grouting Mortar 587

Nicola Wessels, Thai Son Dang, Klaus Hackl and Günther Meschke
Cutting and Material Transport in EPB Shield Machines: A Coupled Simulation Approach 599

TBM-Ground Interactions

Josep Maria Carbonell, Eugenio Oñate and Benjamín Suárez
Advances in the Modelling of Excavation and Cutting Tool Wear with the Particle Finite Element Method 613

Jan Düllmann, Fritz Hollmann, Markus Thewes and Michael Alber

Fritz Hollmann, Jan Düllmann, Markus Thewes and Michael Alber

Djamila Bouayad and Fabrice Emeriault
Application of the ANFIS Method for the Prediction of Surface Settlements caused by a Slurry Shield Tunnel Boring Machine 649

Juan M. Mayoral and Azucena Román
Static Performance Evaluation of a Tunnel built in Very Soft Clay 655

Zdenek Zizka, Britta Schoesser and Markus Thewes
Face Stability Assessment of Large-diameter Slurry Shields 663

Adam Bezuijen
Modelling of Foam-Sand-TBM Interaction 675

Aycan Özlem Özarmut, Mario Galli, Holger Steeb and Markus Thewes
Two-scale Investigations on the Rheological Properties of Foam and Particle-laden Foams 687

Computational Models for Safety and Security

W.K. Chow
Application of Computational Fluid Dynamics for Simulating Building Fires in Subway System: Current Situation 701

Tanusree Chakraborty, Martin Larcher and Norbert Gebbeken
Comparative Performance of Tunnel Linings under Blast Loading 713
Jinyang Fu, Herbert Klapperich and Slamet Widodo
Complex Variable Solutions for Ground Movement Induced by Oval-deforming Twin Tunnels 721

A.M. Talmon and A. Bezuijen
Fluid Grout and the Longitudinal Beam Action of a Tunnel Lining 729

High Performance Computing in Tunneling and Subsurface Engineering

Andreas Kassel, Manuel Gehrig, André Heim, Ingo Koglin, Judith Kirchner and Daniel Korcz
Automatic Seismic Prediction on Tunnel Boring Machines (TBM) 743

Romeo Fernandes, Gerald Nicolas and Thierry Fouquet
Mesh Adaptation for Coupled Hydro-mechanical Industrial Applications 753

M. A. Eid and M. Zaki AbdElrehim
Optimization of Tunnel Profile in Different Ground Conditions Using Genetic Algorithms 761

Lasse Lambrecht and Wolfgang Friederich
Simulation of Seismic Wave Propagation for Reconnaissance in Mechanized Tunneling Using the Spectral Element and Nodal Discontinuous Galerkin Method 769

Risk and Reliability Analysis

Rohit Ranjan, Wolfgang Betz, Iason Papaioannou and Daniel Straub
A Two-Step Approach for Reliability Assessment of a Tunnel in Soft Soil 781

Steffen Freitag, Michael Beer, Kok Kwang Phoon, Janosch Stascheit, Jelena Ninič, Ba Trung Cao and Günther Meschke
Concepts for Reliability Analyses in Mechanised Tunnelling – Part 1: Theory 791

Janosch Stascheit, Steffen Freitag, Michael Beer, Kok Kwang Phoon, Jelena Ninič, Ba Trung Cao and Günther Meschke
Concepts for Reliability Analyses in Mechanised Tunnelling – Part 2: Application 801

Petros Fortsakis, Dimitrios Litsas and Michael Kavvadas
Reliability Analysis of Unreinforced Tunnel Final Lining 813

Peter Vogt and Markus Thewes
The Computation of Life-cycle Costs for Road Tunnels 821

Jan Pruška and Matouš Hilar
Stochastic Analysis of the Tunnels using LHS 829
Case Studies

Adriano Fava, Marco Ghidoli, Francesco Gamba, Riccardo Castellanza, David Betti and Francesca Giussani

3D Modeling of the Subsurface Works beneath Rabat Fort, Morocco 843

Yafei Qiao, Wenqi Ding, Dongwu Xie and Wei-Kang Song

A 3D Finite Element Model for Shield Tunnel Undercrossing the Historical Building in Soft Ground 855

Feng Chu, Yongsheng Li, Fayun Liang and Zhu Song

Deformation Effects of Deep Excavation on the Adjacent Metro Lines and Its Safety Control 863

Zili Li, Kenichi Soga, Xia Bian and Peter Wright

Ovalisation of Cast-iron Bolted Tunnels and their Modelling 871

Benno Ring and Thomas Böhme

Structural Analysis of the Load Case Fire for the Segments of the Sluiskiltunnel 879

Rafał Kuszyk and Anna Sieminska-Lewandowska

Back Analysis of Blow Out in Warsaw Project 889

Harald Cordes and Sotirios Vardakos

Rock Tunneling in Manhattan – Optimization of Rock Support using Distinct Element Modelling 895

Alessandra Di Mariano, Antonio Gens and Robert Mair

Soil Movements associated with Compensation Grouting during Line 9 Excavation in Barcelona: a Case Study 909

Matteo-Maria Montini and Riccardo Castellanza

Ceneri Base Tunnel: Optimization of the Excavation and Temporary Lining Design to Cope with Time-dependent Mechanical Behaviour 917
