5.2.2 Principles of operation — 45
5.2.3 System operation flow — 47
5.2.4 Ultrasound-based modes of operation — 48
5.2.4.1 Fetal head station — 48
5.2.4.2 Fetal head position — 48
5.2.4.3 Head descent during contraction — 50
5.2.4.4 Pubic arch angle mode — 50
5.2.5 Measurements by vaginal examination and finger sensor — 52
5.2.6 Vacuum extraction operation mode — 52
5.2.7 Retrieving and exporting recorded data — 52
5.3 LaborPro clinical experience — 55
5.4 Clinical implications — 59
Bibliography — 60

6 Systems for computer analysis of intrapartum fetal heart rate signals — 61
6.1 Introduction — 61
6.2 OB TraceVue® (Philips Healthcare®, Eindhoven, Netherlands) — 62
6.3 Omniview-SisPorto® (Speculum®, Lisbon, Portugal) — 62
6.4 PeriCALM™ (LMS Medical Systems, Montreal, QC, Canada, and PeriGen, Princeton, NJ, USA) — 65
6.5 INFANT® SYSTEM (K2 Medical Systems™, Plymouth, UK) — 66
6.6 Trium CTG Online® (Trium Analysis Online GmbH, Munich, Germany) — 68
6.7 Discussion — 68
Bibliography — 70

Rohan D'Souza, Tim Van Mieghem and Isis Amer-Wåhlin
7 Abdominal fetal electrocardiography: the way forward? — 73
7.1 Introduction: the current place of fetal ECG monitoring — 73
7.2 The advent of abdominal fetal ECG monitoring — 73
7.3 The device: AN24™ fetal ECG monitor — 74
7.4 Comparing abdominal fetal ECG monitoring with standard CTG monitoring — 76
7.4.1 Recording quality — 76
7.4.2 Reliability — 76
7.4.3 Accuracy and error — 77
7.4.4 Uterine activity monitoring — 77
7.4.5 Safety — 77
7.4.6 Differentiating maternal from fetal heart rate — 78
7.4.7 Patient comfort and satisfaction — 78
