Preface — vii

Guoquan Zhang, Daohong Song, Zhibo Liu, Mengxin Ren, Zhigang Chen, Jianguo Tian, Jingjun Xu

1 Recent progresses on weak-light nonlinear optics — 1
  1.1 Ultraviolet photorefraction in LiNbO₃ — 2
  1.1.1 Ultraviolet photorefractive materials, their effects and applications — 3
  1.1.2 Ultraviolet photorefractive effects in LiNbO₃ — 4
  1.1.3 Ultraviolet band edge photorefractive effects — 12
  1.1.4 Enhancement on ultraviolet light-induced absorption — 14
  1.1.5 Absorption edge and related defect structures in LiNbO₃ — 16
  1.1.6 Other effects and applications in the ultraviolet spectral range — 20
  1.2 Incoherent nonlinear optics and discrete spatial solitons — 20
    1.2.1 From coherent to incoherent light — 21
    1.2.2 From bulk to discrete media — 22
    1.2.3 Introduction to spatial optical solitons — 22
    1.2.4 Nonlinear optics with incoherent light — 23
    1.2.5 Spatial solitons in discrete systems — 28
  1.3 Nonlinear optical properties of novel carbon-based materials — 39
    1.3.1 Carbon-based materials — 40
    1.3.2 Progress of optical nonlinearities of carbon-based materials — 42
    1.3.3 Optical nonlinearities of carbon nanotube and its hybrid materials — 44
    1.3.4 Optical nonlinearities of graphene and its hybrid materials — 53
  1.4 Nonlinear optics from metallic plasmonics — 65
    1.4.1 Introduction to surface plasmonic polariton — 67
    1.4.2 Nonlinear processes in metals — 72
    1.4.3 Metallic plasmon-enhanced second-harmonic generation — 74
    1.4.4 Metallic plasmon-enhanced third-order nonlinear optics — 75
    1.4.5 Metallic plasmon-enhanced nonlinear optical activity — 81
  1.5 Summary — 87
Xianfeng Chen

2 Polarization coupling and its applications in periodically poled lithium niobate crystal — 105

2.1 Introduction — 105
2.2 Polarization-coupling theory based on transverse electro-optical effect — 108
  2.2.1 Transverse electro-optical effect — 108
  2.2.2 Jones matrix method — 114
  2.2.3 Polarization-coupling mode theory — 119
2.3 Tunable wavelength filter and optical switch based on polarization-coupling effect — 124
  2.3.1 Sole-type filter based on polarization-coupling effect in PPLN crystal — 124
  2.3.2 Tunable multiwavelength filter by local-temperature-control technique — 127
  2.3.3 Flat-top bandpass Sole-type filter and optical switch in PPLN crystal — 133
2.4 Control of linear polarization and its applications — 138
  2.4.1 The evolution of the polarization state in the PPLN and the control of linear polarization state via electro-optical effect — 138
  2.4.2 Linear polarization state modulator — 140
  2.4.3 Electro-optic chirality control in PPLN — 144
  2.4.4 Optical isolator based on the electro-optic effect in HPPLN — 147
2.5 Control of angular momentum and its applications — 155
  2.5.1 The angular momentum of light — 155
  2.5.2 The evolution of polarization state of light by changing electric field — 155
  2.5.3 Control of spin angular momentum of light — 159
  2.5.4 Control of orbital angular momentum and its applications — 162
2.6 Polarization-coupling cascading and its applications in PPLN crystal — 169
  2.6.1 Second-harmonic generation (SHG) cascading — 169
  2.6.2 Polarization-coupling cascading and nonlinear phase shift — 171
  2.6.3 Cross-modulation — 175
  2.6.4 Fast and slow light — 179
4.3.3 The propagation model of the liquid crystal in strong nonlocal condition — 285
4.3.4 The approximate analytical solution of a single nematicon — 287
4.4 The thermal nonlinear nonlocality — 291
4.4.1 Spatial optical solitons in the lead glass — 292
4.4.2 Other thermal nonlinear materials — 295

Weilong She, Guoliang Zheng
5 Wave coupling theory and its applications of linear electro-optic (EO) effect — 307
5.1 Introduction — 307
5.2 Wave coupling theory of linear EO effect in transparent bulk crystal — 309
5.3 Wave coupling theory of linear EO effect in absorbent medium — 319
5.4 Wave coupling theory of mutual action of linear EO, OA, and Faraday effects — 325
5.5 Wave coupling theory of QPM linear EO effect — 330
5.5.1 Wave coupling theory of Linear EO effect in periodically poled crystals — 333
5.5.2 Linear EO effect in linear chirped-periodically poled crystals — 338
5.5.3 Wave coupling theory of united effect of QPM linear EO effect, second-harmonic generation, and sum/difference frequency generation — 344
5.5.4 Wave coupling theory of QPM linear EO effect for a focused Gaussian beam — 355

Index — 367
