CONTENTS

Product and Process 1

Assessment of dynamics and risks in supplier selection processes ........................................... 13
An Integrated Decision Making Framework for Automotive Product Development with the Supply Chain ........................................... 13
An exploration into measurement consistency on coordinate measuring machines ............................ 14
Cai model for prismatic parts in digital manufacturing ................................................................. 14

Product and Process 2

Storage pricing and allocation in a Headquarter-managed centralized distribution center ............... 15
3D Digital Reconfiguration of an Automated Welding System for a Railway .................................. 15
Manufacturing Application ............................................................................................................ 15
A Novel Product Representation to Highlight Cross-Assembly Dependencies and Product Robustness ...................................................................................................................... 16
Evolutionary optimisation of production workflows ................................................................. 16

Product and Process 3

Virtual Reality based Conjoint Analysis for Early Customer Integration in Industrial Product Development .......................................................................................................................... 17
LOPEC – Logistics Personal Excellence by continuous Self-Assessment .......................................... 17
Direct toolpath generation based on graph theory for milling roughing ........................................... 18
Valuable Use Cases towards a Generic Model of Geo-station Welding ........................................... 18

Product and Process 4

Multi-Criteria Assembly Line Design under Demand Uncertainty ................................................. 19
Usage of case-based reasoning in FMEA-driven software .............................................................. 19
A machining feature information model for dynamic manufacturing planning ............................... 20
Low-cost extension of information transparency throughout the product life-cycle via optical identification and quality indication .......................................................... 20

http://d-nb.info/1049404165
Light Controlled Factory 1

Identification of Key Temperature Measurement Technologies for the Enhancement of Product and Equipment Integrity in the Light Controlled Factory

Intelligent Composite Layup by the Application of Low Cost Tracking and Projection Technologies

A novel approach for the combined use of AR goggles and mobile devices as communication tools on the shopfloor

Laser Tracker Position Optimization

Light Controlled Factory 2

Comparison of the measurement performance of high precision multi-axis metal cutting machine tools

Simulation of the Laser Beam Melting Process – Approaches for an Efficient Modelling of the Beam-Material Interaction

Short-term cyber-physical Production Management

Dynamic alignment control using depth imagery for automated wheel assembly

Large Volume Metrology Technologies for the Light Controlled Factory

Factory 1

Production Resource Search using the Viral Phenomenon: Concept Introduction

Capacity planning and resource allocation in assembly systems consisting of dedicated and reconfigurable lines

Integration Architecture of Intelligent Maintenance Systems and Spare Parts

Supply Chain Planning

Research on Reliability Evaluation of Reconfigurable Manufacturing System

Factory 2

Integrating Pointing Gesture Detection for enhancing Brainstorming Meetings using Kinect and PixelSense

Simulation in Manufacturing: Review and Challenges

Conceptual Design of a Self-Optimising Production Control System
Simulation based-applications (DREAM) 1

Introduction to “Simulation based application Decision support in Real-time for Efficient Agile Manufacturing” – DREAM
Simulation based decision support systems: An industrial end-user based requirement gathering process
Modeling of System Knowledge for Efficient Agile Manufacturing: Tool evaluation, selection and implementation scenario in SMEs
Implementing ManPy, a semantic-free open-source Discrete Event simulation package, in a Job Shop

Simulation based-applications (DREAM) 2

Simulation-based Decision Support Tools for Demand Disaggregation in a Supply Chain characterised by High Routing Flexibility
Information Support and interactive planning in the Digital Factory: Approach and industry-driven evaluation
Test Implementation and Initialisation of a Simulation model using CMSD
From COTS simulation software to an open-source platform: a use case in the medical device industry

Systems, IT and interoperability 1

Information Technology for the Factory of the Future – State of the Art and Need for Action
Interoperability between OPC-UA and AutomationML
Automatic Conformance Test Generation based on a Verified Model of a Bus System Standard
Pattern-based Business Model Development for Cyber-Physical Production Systems

Systems, IT and interoperability 2

Cloud-based Platform to facilitate Access to Manufacturing IT
Cloud-based Auction Tower for Perishable Supply Chain Trading
A solution for information management in logistics operations of modern manufacturing chains
Competences for Cyber-Physical Systems in Manufacturing – first Findings and Scenarios
Product and Process 5

Digital Planning of Harmonised Quality Testing Activities throughout the Product Life Cycle 38
Process-Oriented Semantic Knowledge Management in Product Lifecycle Management 38
Towards a PLM interoperability for a collaborative design support system 39

Factory 3

Towards a role-centric and context-aware information distribution system for manufacturing 40
Evaluating a prototype approach to validating a DDS-based system architecture for automated manufacturing environments 40
Optimisation of Weld Seam Configurations Using a Genetic Algorithm 41
Minimising energy consumption for robot arm movement 41

Systems, IT & Interoperability 3

Machine availability monitoring for adaptive holistic scheduling: A conceptual framework for mass customization 42
Engineering innovation factory 42
Concept of a Failures Management Assistance System for the Reaction on Unforeseeable Events during the Ramp-Up 43
