

Table of Content

Table of Tables	XV
Table of Figures	XVII
Table of Equations	XIX
Table of Abbreviations	XXI
1 Introduction	1
1.1 Motivation	1
1.2 Research deficit and main research question	3
1.3 Conceptual considerations	5
1.4 Five more specific research questions	7
1.5 Methodological approach	7
1.6 Structure of my dissertation	10
1.7 Research achievements and contributions.....	12
1.8 General remarks upon the presentation of results	14
1.9 Main answers to the five research questions posed	15
2 Methodology and fundamental principles	27
2.1 Methodology.....	28
2.1.1 Literature reviews, meta-analyses and historical science	28
2.1.2 The historical method	31
2.1.2.1 The research question	32
2.1.2.2 The heuristic	33
2.1.2.3 The critique	34
2.1.2.4 The interpretation	35
2.2 Demography as the scientific discipline of human populations	36
2.3 Energy from a physical point of view	37
2.3.1 The laws of thermodynamics	38
2.3.2 Entropy and thermodynamic equilibrium.....	39
2.4 Energy in the form of biomass	41

2.4.1	Energy and material dynamics in ecosystems	41
2.4.2	Photosynthesis as the biosphere's most vital reaction	43
2.4.2.1	The light reactions converting solar into chemical energy	44
2.4.2.2	The Calvin cycle producing glucose	46
2.4.2.3	Brief synthesis in chemical equations.....	47
2.4.3	Photorespiration and alternative mechanisms to carbon fixation...	47
2.4.4	Net primary production and ecological efficiencies in the food chain.....	50
2.4.5	Life as the driver for chemical disequilibrium	52
2.5	Energy in the economic system.....	54
2.5.1	Energy sources and energy carriers	54
2.5.2	The energy conversion chain	56
2.6	Units of measure of energy, power and biomass	57
2.7	The measurement of economic activity	60
2.7.1	GDP as a key indicator for a defined territory's economic activity	61
2.7.2	GDP calculation by means of the final expenditure compilation ...	63
2.7.3	Real versus nominal GDP	64
2.7.4	Three approaches to currency conversions.....	65
2.7.5	Multilateral comparisons and the Geary-Khamis method	67
2.7.6	GDP per capita as indicator in international comparison	69
3	Condensed body of source material	71
3.1	Statistical databases providing estimates on several objects of research.....	73
3.2	Statistical databases providing estimates on one object of research ...	82
3.2.1	Estimates of population size	82
3.2.2	Estimates of primary energy supply	83
3.2.3	Estimates of economic activity	85
3.3	Brief informational synthesis on statistical databases presented	86

3.4	Literary sources providing estimates on several objects of research...	87
3.5	Literary sources providing estimates on one object of research	92
3.5.1	Estimates of population size	92
3.5.2	Estimates of primary energy supply	94
3.5.3	Estimates of economic activity	97
3.6	Selection of principal and revising sources	100
3.6.1	Selection of sources for the quantification of population size ...	100
3.6.2	Selection of sources for the quantification of primary energy supply	102
3.6.3	Selection of sources for the quantification of economic activity...	103
4	Verification of the selected source material	105
4.1	Critique of authenticity	106
4.1.1	The estimates provided by the selected statistical databases ...	106
4.1.2	The estimates provided by the selected literary sources	112
4.2	Critique of correctness.....	132
4.2.1	Estimates of population size	132
4.2.2	Estimates of primary energy supply	136
4.2.3	Estimates of economic activity	142
5	Biomass supply to humankind.....	147
5.1	Literary sources providing estimates on three typical societies	148
5.2	Literary sources providing estimates on one typical society	149
5.2.1	Literary sources providing estimates on the hunter-gatherer society	149
5.2.2	Literary sources providing estimates on the agricultural society	150
5.2.3	Literary sources providing estimates on the industrial society...	150
5.3	Selection of sources for a quantification of biomass supply.....	151
5.4	Critique of authenticity	152
5.5	Critique of correctness.....	156

6 Synthesis and interpretation of the quantitative data.....	161
6.1 Synthesis of the estimates on the four objects of research.....	161
6.1.1 Generating missing estimates of global economic activity.....	162
6.1.2 Generating missing estimates of global biomass supply	164
6.1.3 The source basis for the ensuing chapters	167
6.2 Interpretation of the objects of research's development.....	168
6.2.1 Time period characterised by hunter-gatherer societies.....	172
6.2.1.1 Conditions affecting the development of population size	175
6.2.1.2 Conditions affecting the development of total energy supply	175
6.2.1.3 Conditions affecting the development of economic activity.....	176
6.2.2 Time period characterised by agricultural societies	178
6.2.2.1 Conditions affecting the development of population size.....	181
6.2.2.2 Conditions affecting the development of total energy supply	185
6.2.2.3 Conditions affecting the development of economic activity.....	190
6.2.3 Time period characterised by industrial societies	195
6.2.3.1 Conditions affecting the development of population size.....	196
6.2.3.2 Conditions affecting the development of total energy supply	200
6.2.3.3 Conditions affecting the development of economic activity.....	205
6.3 Brief review, additional considerations and implications	215
6.3.1 Population size from a historical and future perspective.....	215
6.3.2 Total energy supply from a historical and future perspective....	218
6.3.3 Economic activity from a historical and future perspective	222

7 The role of biomass for the creation of wealth	225
7.1 The role of biomass in the classical time periods.....	225
7.1.1 Biomass in the time period characterised by hunter-gatherer societies.....	226
7.1.2 Biomass in the time period characterised by agricultural societies.....	229
7.1.3 Biomass in the time period characterised by industrial societies.....	233
7.2 Extending the lines from the past into the future.....	239
7.3 The role of biomass in the future society.....	244
7.3.1 Overview of current studies on the prospective biomass potential for energy services.....	244
7.3.2 The net primary production and its availability in the ecosystem.....	247
7.3.3 Humankind's demand for net primary production.....	248
7.3.4 Juxtaposition of natural supply and human demand.....	251
7.3.5 Biomass' potential in a prospective sustainable primary energy supply.....	255
8 Conclusion	263
8.1 Résumé.....	263
8.2 Limitations.....	266
8.3 Implications.....	267
8.4 Outlook.....	269
Bibliography	271
