

University of Veterinary Medicine Hannover

**Analysis of complex traits and genomic
population structure using genome-wide SNP
arrays in the dog**

Thesis

Submitted in partial fulfilment of the requirements for the degree

-Doctor of Veterinary Medicine-

Doctor medicinae veterinariae

(Dr. med. vet.)

by

Sophia Pfahler

Table of contents

1.	Introduction	1
	• Chapter contents	4
2.	Identification of Quantitative Trait Loci (QTL) for Canine Hip Dysplasia and Canine Elbow Dysplasia in Bernese Mountain Dogs	5
	• Abstract	6
3.	A Quantitative Trait Locus for Canine Hip Dysplasia in the German Wirehaired Pointer.....	7
	• Abstract	8
	• Introduction.....	8
	• Materials and methods	9
	• Results.....	11
	• Discussion	11
	• References	13
4.	Across-breed mapping of Quantitative Trait Loci for Canine Hip Dysplasia	21
	• Abstract	22
	• Introduction.....	22
	• Results.....	24
	• Discussion	25
	• Material and methods	28
	• References	31
5.	A massive reduction of the genetic diversity in the Lundehund.....	61
	• Abstract	62

6. Effective population size, extended linkage disequilibrium and signatures of selection in the rare dog breed Lundehund.....	63
• Abstract	64
• Results.....	65
• Discussion	67
• Conclusion.....	71
• Material and methods	71
• References	74
7. Degenerative myelopathy in a SOD1 compound heterozygous Bernese Mountain Dog.....	83
• Abstract	84
8. General discussion.....	85
9. Summary.....	91
10. Zusammenfassung.....	95
11. Appendix.....	101
12. List of Publications	103
13. Acknowledgements	105
