ACKNOWLEDGEMENTS

CHAPTER 1 INTRODUCTION

1. BRIEF BACKGROUND
1.2 PROBLEM TO BE SOLVED
1.3 SOLUTION APPROACH
1.4 SUMMARY OF THE WORK

CHAPTER 2 SOLUTION MAPPING METHODS AND THEIR APPLICATIONS

2.1 IN SITU ADAPTIVE TABULATION (ISAT)
2.2 PIECE-WISE REUSABLE IMPLEMENTATION OF SOLUTION MAPPING (PRISM)
2.3 ADAPTIVE POLYNOMIAL TABULATION
2.3.1 Reduced library APT model
2.4 STOCHASTIC REACTOR MODEL FOR HCCI ENGINES

CHAPTER 3 COMBUSTION ENGINE CALCULATIONS

3.1 N-HEPTANE/TOLUENE FUELED SRM-HCCI CALCULATIONS
3.1.1 Demonstration of the SRM-HCCI engine model
3.1.1.1 Demonstration with Repeated Single Cycle calculations
3.1.1.2 Demonstration with Free Stochastic Cycle calculations
3.1.2 Comparison of APT with ODE integration (RSC & FSC)
3.1.2.1 Comparisons for RSC calculations
3.1.2.2 Comparisons for FSC calculations
3.1.3 Parametric study of APT
3.1.3.1 The influence of ISAT error tolerance on APT
3.1.3.2 The influence of APT parameters on local region reuse
3.1.4 Control of tabulation errors in APT
3.1.5 Computational speed up factor
3.1.5.1 Speed up factor versus APT parameters
3.1.5.2 Speed up factor for RSC calculations
3.1.5.3 Speed up factor for FSC calculations
3.1.6 Reduced library APT model calculations
3.1.6.1 Nth cycle comparisons
3.2.6.2 Comparisons for the mean profiles
3.2.6.3 Tabulation errors for the reduced library APT model
3.1.6.4 Computational speed up with reduced library APT model

CHAPTER 4 CONCLUSION AND FUTURE OUTLOOK
