1 Introduction to the Theory of Stellar Evolution
Giacomo Beccari and Giovanni Carraro
1.1 The Pre-Main Sequence Phase .................................. 1
1.2 The Main Sequence ............................................. 3
1.3 The Combustion of Hydrogen in a Shell: The Sub and Red Giant Branches ............................................. 4
1.4 The Helium-Burning in the Core: The Horizontal Branch .................. 8
1.5 Two Burning Shells: The AGB .................................. 10
1.6 The Final Stages of the Evolution of the Stars ..................... 13
References...................................................................... 16

2 Blue Straggler Stars: Early Observations That Failed to Solve the Problem
Russell D. Cannon
2.1 Introduction .......................................................... 17
2.2 The Classical Blue Stragglers .................................... 19
2.2.1 Globular Clusters ............................................... 19
2.2.2 The Older Open Clusters .................................... 20
2.2.3 Younger Open Clusters and BSSs in the Field ............. 23
2.3 Early Ideas on the Origin of Blue Stragglers ...................... 24
2.3.1 Blue Stragglers and Algol-Type Eclipsing Binaries ......... 24
2.3.2 Other Possible Explanations for BSSs ...................... 25
2.4 Expanding the Definition of BSSs, 1970–1990 .................... 26
Conclusions .................................................................. 26
References...................................................................... 27

3 The Blue Stragglers of the Old Open Cluster NGC 188
Robert D. Mathieu and Aaron M. Geller
3.1 Blue Stragglers in Open Clusters ................................. 29
3.1.1 The Open Cluster NGC 188 .................................. 30
3.1.2 The WIYN Open Cluster Study and Radial Velocities .... 30
3.2 Observational Findings from the Blue Stragglers in NGC 188
3.2.1 Binary Frequency
3.2.2 Orbital Period and Eccentricity Distributions
3.2.3 Secondary-Star Mass Distribution
3.2.4 Detection of White Dwarf Companions
3.2.5 Stellar Rotational Velocities
3.2.6 Spatial Distribution
3.2.7 Blue-Straggler Masses
3.2.8 Insights from Two Notable Blue Straggler Systems
3.2.9 Summary

3.3 Blue Straggler Formation Within an N-Body Model of NGC 188
3.3.1 The NGC 188 N-Body Model
3.3.2 Formation Channels for Blue Stragglers in the NGC 188 Model
3.3.3 Implications for the Origins of the NGC 188 Blue Stragglers
3.3.4 Outstanding Questions and Missing Pieces in the N-Body Model
3.3.5 Efficiency of Mass Transfer in the N-Body Model
3.3.6 Summary of Findings from N-Body Modeling of NGC 188

Conclusions
References

4 Field Blue Stragglers and Related Mass Transfer Issues
George W. Preston
4.1 Introduction
4.1.1 Historical Developments in First Part of the Twentieth Century
4.2 Identification of BSS
4.2.1 The Metal-Poor Halo
4.2.2 FBS of the Thick/Thin Disc
4.3 Group Properties of Metal-Poor FBS
4.3.1 Colour Boundaries
4.3.2 Specific Frequencies
4.3.3 The Distinguishing Characteristics of FBS Binary Orbits
4.4 Galactic Distribution
4.4.1 Smooth Halo Field
4.4.2 The Galactic Bulge
4.4.3 Halo Streams
4.5 Metal-Rich A-Type Stars Above the Galactic Plane: Another Inconvenient Truth
